Yallop, Manager.

EDITORIAL NOTES

WHEN YOUR TURN COMES?

Will there be anything left when it comes your turn to collect on the pay-roll deductions you are now making for "future security"?

An analysis of the national situation shows that during one month last year:

"One person was drawing unemployment compensation for every seventy-eight employed. One person was receiving old-age or disability benefits for every eleven persons employed. One person was receiving survivors' benefits for every twenty-five persons employed. One person was receiving public assistance payments for every thirteen persons employed."

These are presumed to be "good times" in terms of employment and average family income, what will the situation be if there comes an era of reaction" or even depression?

No man, woman, or child can expect to escape the payment of a share of the costs of failure of our government officials to economize—this payment will be in inflation or higher taxes, or both.

MAKE 1952 A SAFE YEAR

The Associated General Contractors of America, Inc., through a special Accident Prevention Committee, has launched a nation-wide program for greater worker safety in the construction industry during 1952.

More than one hundred and eighteen Chapters of the organization throughout the United States are actively participating in the program with many local contractors already determined to prove their safety program is a result producing operation.

Glen W. Maxon, President of the AGCA, in a New Year's communication to Chapter presidents, points out that during 1950 there were 2,300 deaths and 205,000 injuries in the construction industry. The ratio of ninety-three deaths per 100,000 workers in construction is a very poor comparative showing with the average of twenty-seven in all industries. The figures also disclose the construction industry as having had the highest number of injuries per 100,000 workers.

It is obvious from the record that the construction industry make a result producing effort to reduce accidents, and if such is not done, there is grave danger Government will effect compulsory laws requiring costly compliance.

The success of the AGCA accident prevention program will depend upon the cooperation of in-

dividual contractor members, as in the final analysis he is the only one who can carry a well planned Safety Program from the national industry to the individual worker level. There is little doubt that the end of 1952 will see considerable progress and success achieved in reducing accidents throughout the construction industry, and the program is one that will accrue to the benefit of many activities closely allied to the construction industry.

SUPREME COURT DECISION

The United States Supreme Court, in a recent decision, interpreted the disputes clause of the standard government contract form to mean that the determination of the department head is final, and that there can be no recourse to the courts in disputes over findings of fact unless fraud on the part of the government can be proved.

The interpretation appears so positive as to prohibit administrative or judicial remedy, leaving only a legislative remedy for the principles involved.

The decision adds another hazard to contracting, leaving contractors without the possibility of judicial review of findings by government departments no matter how the findings are arrived at, aside from fraud.

THANKS APPRECIATED

Publication of a magazine is similar to any other business or professional endeavor. When a satisfied customer or client takes the time and makes the effort to acknowledge a service well performed, it is a source of pleasure to those performing the work. We appreciate the following:

Important to school interiors...

✓ the right color for educational functions

✓ the right material for low maintenance

Suntile
offers both!

Better lighting and seeing conditions—better emotional environment for study and play—better school morale! These are improvements you can make in schools with interiors of the *right* colors.

Lower maintenance—longer wear—ease of cleaning—protection from fire! These are advantages you can give to school interiors with the *right* material.

You can accomplish these much-to-be-desired objectives for the schools you design and build with one product for walls and floors—*real clay* Suntile.

A new, functionally-correct Suntile color line has been scientifically developed to help schools, and other building interiors, better serve their purposes. In classrooms, cafeterias, laboratories, rest rooms, shower rooms, gymnasiums, corridors and auditoriums, these new Suntile colors can be *fitted to the school function*.

In these same areas, Suntile will protect the school budget with its permanence, its great resistance to the wear and tear of school traffic, and its simple cleaning with soap and water.

For more information about the new Suntile colors for institutional, industrial and commercial use, ask your Authorized Suntile Dealer for our new color booklet, "Suntile Functional Color Recommendations." Or write us direct, Dept. AE-1, The Cambridge Tile Mfg. Co., P. O. Box 71, Cincinnati 15, Ohio.

Mottled Dresden Blue 752

Suntile MOTTLED DRESDEN BLUE

A special tile and finish developed for heavy service

Suntile Mottled Dresden Blue is particularly recommended for heavy service in schools, hospitals, industry and commercial establishments. Tests show that blue is a universal favorite. It is cool, fresh and clean looking to the eye. It is soft and restful and provides an ideal background. This Suntile product lends dignified treatment to foyers, lobbies and corridors. In cafeterias, wash rooms, swimming pools, locker rooms, it represents cleanliness itself. The mottled tone helps to overcome monotony, resists soiling and is easy to maintain. Mottled Dresden Blue is a unique addition to the Suntile functional color line developed by The Cambridge Tile Mfg. Co., with the aid of Faber Birren, noted color authority.

JOINT INFORMATION COMMITTEE

AMERICAN INSTITUTE OF ARCHITECTS and THE PRODUCERS COUNCIL, INC.

Through the courtesy of F. Bourn Hayne, A.I.A., we are able to release the minutes of the Meeting of the Joint Information Committee of the A.I.A. and the PRODUCERS' COUNCIL held in New York November 15, 1951. The content of the agenda covering the second question CARD FILE OR LOOSE-LEAF SPECIFICATION SERVICE is particularly comprehensive and with limitations of space considered we are reproducing as much as possible of these minutes.

"The Secretary (Theodore Irving Coe, A.I.A., Secretary) reported the following action taken by the Board of Directors of The Institute at its meeting September 30-October 2: Resolved: That The Joint Committee of the A.I.A. and The Producers' Council at the request of the Board, give further consideration and study to the implementation of this proposed service with a view to the development of more specific recommendations with respect to the same. The Secretary read a telegram received from John Rex, President of the California Council of Architects, A.I.A., recommending, on behalf of the Council, that favorable consideration be given by The Joint Committee to the initiating of a specification service. The Secretary also read a letter received from Francis Joseph McCarthy, President of the Northern California Chapter, A.I.A., urging, on behalf of the Northern California Chapter, similar action by the Joint Committee.

Mr. Silling, A.I.A., called attention to the need for a service of this character, by many architects, particularly the smaller practitioner, and the important part that could be played by The Institute in providing authoritative data and technical information that would enable architects to do a better technical job. The Secretary reported that, pursuant to the suggestion of The Joint Committee that the possibility of effecting a collaboration between The Institute and The Construction Specification Institute, Inc. be explored, an informal meeting had been held between Carl J. Ebert, President, The Construction Specification Institute, Inc., C. M. Mortenson, and The Secretary.

At this meeting Mr. Ebert indicated the CSI was

actively interested in the improvement of specifications and would be happy to collaborate with The A.I.A. in the initiating of a comprehensive specification service. It was suggested this might be accomplished through a joint committee of The A.I.A. and The CSI, with Co-Chairmen, similar to The Joint Committee of The A.I.A. and The Producers' Council. Mr. Taylor recalled the Industry Research Service proposed by The Institute and pointed out the development of specification material might serve as a means of pointing out certain areas in which further research might result in the improvement of specification information.

Mr. Hayne was of the opinion the study of specification material sponsored by The Institute by students, trade apprentices, and mechanics would prove of material good public relations value. Mr. Rogers expressed the opinion that if the project is to be successfully initiated it must be approached from a realistic standpoint. He stated that producers are not likely to be interested in providing financial support in the absence of definite information as to anticipated costs. (Tyler S. Rogers, Producers' Council.) He recommended: 1. That steps be taken to determine the probable cost of preparing and publishing the basic specification material. 2. The probable cost of preparing and publishing additional pages or sections. 3. Based on the foregoing the charge to associations for the inclusion of an association's specification.

Following further discussion the following motion was made and unanimously adopted: **RESOLVED:** That Messrs. Walter A. Taylor, Charles M. Mortenson, Leonard G. Haeger, and Carl J. Ebert, be appointed a Committee to determine the following elements of cost of the proposed specification service: 1. The probable cost of preparing and publishing the basic specification material. 2. The probable cost of preparing and publishing additional pages or sections. 3. A suggested charge to an association for the inclusion and distribution of its specification, on a page or section basis. 4. A suggested charge to an individual producer for the inclusion and distribution of an individual specification, on a page basis.

NOTE: This news space is being contributed by ARCHITECT & ENGINEER Magazine to the JOINT INFORMATION COMMITTEE representing the Northern California Chapter of The American Institute of Architects and the Northern California Chapter of the Producer's Council, Inc., and is available to this Committee for the purpose of bringing to the attention of leaders within the Construction Industry various phases of the Architectural profession and building materials industry procedures for general consideration and comment. Your "ideas" and any suggestions for the better pooling of thoughts along these lines should be sent to "Joint Information Committee, c/o The Architect & Engineer, 68 Post Street, San Francisco," where they will be immediately forwarded to proper committee members.

NEWS and COMMENT ON ART

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, has scheduled the following exhibitions and events for the month of January:

An Exhibition of Pastels by Howard Cook, one of the most widely known of American Print-makers before he gained fame in painting and pastel. Many of the Pastels are of New York and in a representational cubistic manner.

Paintings and Drawings by Gerrie Gutmann, drawn and painted during the past three years.

Oils, Watercolors, Drawings, Etchings and Lithographs by Lovis Corinth, famed European artist whose work has just started to catch the American fancy.

Imaginary Portraits, a group of Paintings by Marcel Vertes which represent childhood portraits of famous persons.

Morocco Photographs by William G. Murray.

Special Events will feature a small exhibition of Children's Art from current classes, which are under the direction of Miriam Lindstrom.

CITY OF PARIS

The Rotunda Art Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, will start the new year with an exhibit of Wood Forms from the High Sierra's by Cornelia Chase; sculptures by Frances Baxter; and a group of paintings by William Gaskin.

The Pictures of the Month will feature Line and Wash Drawings by John Gorham. Scheduled for February is an exhibit of sculpture by Elah Hale Hays, and paintings by Caroline Martin and Hamilton Woll.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, will offer the following exhibitions and special events for the month of January:

EXHIBITIONS: Museum Menagerie; Matthew Barnes Memorial Exhibition; Drawings and Watercolors by Hannah Weber-Sachs, Theodore Brenson, and Margo Hoff; Twentieth Century Master Movements—Cubism—Futurism; Continuing the Albert M. Bender Collection; Modern American Color Prints; Permanent and Loan Collections; and Contemporary Textiles.

SPECIAL EVENTS: Concerts will highlight the Griller Quartet; Egon Petri, Pianist; and the Composers' Forum. The Lecture Series will include Contemporary Textiles by Barbara Fitzwilliams; Drawings and Watercolors by Anneliese Hoyer; and Cubism—Futurism by Barbara Fitzwilliams, Sunday's at 3:15 p.m.; and the Monday evening Lectures at 8 o'clock will include Twentieth Century Art, The Fauves, The Primitives and Primitive Art, and Cubism.

Gallery Tours are conducted each Sunday at 2:30 under the supervision of Martin Snipper and Joan Quigley.

PORTLAND ART MUSEUM

Thomas C. Colt, Jr., director of the Portland Art Museum, West Park and Madison, announces the following schedule of exhibits and events for the month of January:

A Chinese head carved in stone and about twice life size recently presented to the Museum by Cornelius Ruxton Love, Jr., of New York. Two prints from the Oregon Print Annual, the work to be designated by a jury, will be added to the Museum's Print Collection.

CALIFORNIA SCHOOL OF FINE ARTS

The Board of Directors of the San Francisco Art Association has announced that James Weeks has been awarded the 1952 Abraham Rosenberg Traveling Fellowship in Art.

Weeks was born in Oakland, studied at the Marian Hartwell School of Design and at the California School of Fine Arts, to which he later returned as a faculty member.

He has exhibited and won recognition in leading Bay Area museums and galleries.

The Jury making the award was composed of Alfred Frankenstein, Ernest Mundi, David Park, Nell Sinton, and Hamilton Woll, with Karl Kasten serving as Chairman.

SPECIAL HENRI MATISSE EXHIBITION SCHEDULED

A large exhibition of the works of Henri Matisse has been scheduled for special exhibition at the San Francisco Museum of Art from May 21 through July 6.

The showing includes furnishings and decorations; Black line tile murals; stained glass windows; and wrought iron.

Photos by ERNEST BRAUN

GREENBRAE ELEMENTARY SCHOOL

MARIN COUNTY, CALIFORNIA

Architect: WILLIAM CORLETT, A.I.A.

By **MARCIA LEE**

With the design of this Greenbrae Elementary School in Marin County, California, Architect William Corlett proves that school buildings can have the same attractive "liveability" of residences—at no extra cost.

On the theory that a school is a "home" to children during the major portion of their daytime hours, Mr. Corlett has been guided in his planning by the same considerations that he would apply to the planning of a residence.

The buildings are oriented to take best advantage of the dramatic view of nearby Mount Tamalpais; the character of the buildings is in harmony with the architect-designed homes of the Green-

brae tract which the school serves, and, finally, the form of the buildings and the choice of materials and colors have been dictated by "liveability" rather than adherence to standard "institutional" construction policies.

The warmth and informality of redwood, for example, has been used instead of stucco for all exterior siding except along corridors where maintenance is a problem.

The incorporation of shed roofs, which open to the main sources of light, create low-ceilinged alcoves and give the classrooms a pleasant, informal appearance. And, where possible with respect to economy of structure and the special limitations

. . . GREENBRAE SCHOOL

of the site, an effect of indoor-outdoor living has been created. All the lower grade classrooms, for example, are served by individually fenced, partially roofed, outdoor classrooms which contain work benches, a sink, storage cabinets and a planting area for children's gardens.

Site Utilization

The seven and one-half acre school site was donated to the School District by the surrounding residential Tract with the deed restriction that no building facility or playground apparatus be placed within 50 feet of any property line. This stipulation eliminated the intended placement of the Multi-Use Building at the Northwest corner of the site but set up the design layout which clearly separates automobile and bus traffic from playground areas.

Kindergarten and lower grade classrooms were placed on a relatively level portion of the site to allow the development of the individually fenced outdoor classrooms. The long dimension (36') of the lower grade classrooms is set at right angles to the thereby reduced length corridor.

Upper grade (24'x32') classrooms were more readily placed on sloping Northeast portion of the site which is unusable as a playground.

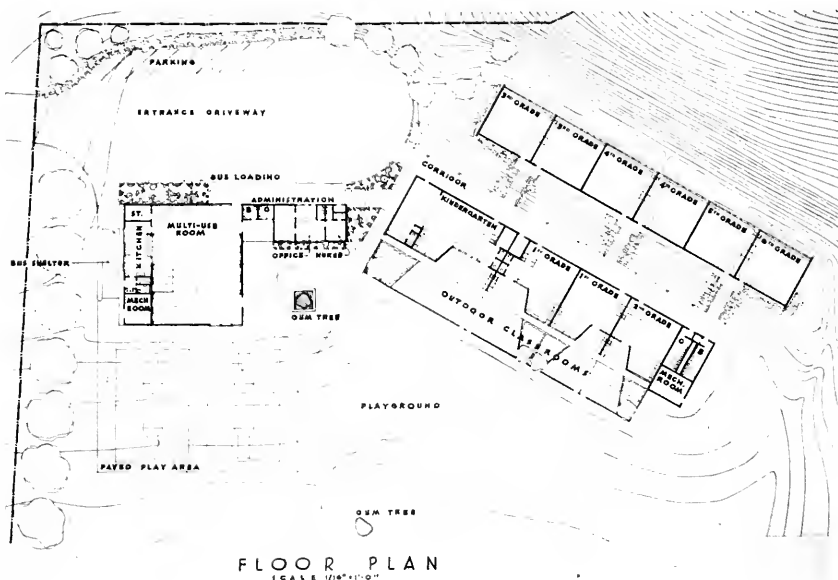

Two existing gum trees were considered in the placement of the building units and the development of an outdoor eating court East of the Multi-Use room.

Structure

The lower grade classroom wing (constructed in 1950) utilizes open Web Steel Joist at 4' 0" ctrs. spanning 36' 0" from 8" WF corridor columns at 12' ctrs. to the South Wall, with the remainder of the frame in wood on concrete footings and radiant-heated concrete slab. (Construction cost \$11 per sq. ft.)

The upper grade classroom wing, now under construction, utilizes a 12" WF beam at midspan of the classroom and an 8" WF beam at north and south walls with 2x10 wood joist at 16" ctrs. spanning 12' 0". The remainder of the structure is wood frame on concrete footings, concrete floor slab radiant-heated, $\frac{3}{8}$ " Plywood wall surfaces and acoustical tile ceilings. Steel sash and vertical Redwood siding on diagonal sheathing, and built-up composition roofing on diagonal sheathing complete the structure.

The Administration Building utilizes 4" x 12" exposed wood ceiling joist at 4' 0" ctrs. Wood frame, plywood interior walls, acoustical tile ceilings,

GREENBRAE SCHOOL . . .

vertical redwood exterior siding, and steel sash, complete the structure.

The Multi-Use room utilizes laminated wood arches at 16' 0" ctrs. spanning 50' 0", and 6" x 10" purlins at 6' 0" sheathed with 2" x 6" T & G straight layed. Exterior is vertical redwood siding and interiors wood frame $\frac{3}{8}$ " Plywood. Built-up composition roof with special surfacing is opened to light with a 12' x 50' Heat Reducing glass skylight. Other features: concrete slab; Asphalt Tile; warm air heat supplies in space above kitchen. Cold air returns are located in the East wall.

Of Special Interest

The Six-Classroom, Administration, Multi-Use room and Kitchen addition abandoned the use of Open Web Steel joist as roof framing because of the uncertain availability of steel. To comply with N. P. A. restrictions, steel in the new addition was limited to 22 tons. The Multi-Use room's laminated wood arches, although slightly more expensive than steel (per arch) proved simpler to tie into the roof membrane and are immediately available on a competitive bidding basis. (Cost quotation per arch, \$1500.)

Interior Treatment

The kindergarten and lower grade classrooms

incorporate the use of low ceilinged (7'-0") activity alcoves. The alcove roof overhang (4'-0") controls south light as well as providing covered adjacent area for the outdoor classrooms.

All classrooms are lighted by concentric-ring incandescent fixtures.

The 50' x 64' Multi-Use room contains 10 cafeteria tables with benches which fold into wall recesses when the room is used as an auditorium or for folk dancing. A 10' x 16' folding platform 18" high may be set up at the north end of the room. Storage is provided for chairs. The Kitchen will serve 350 meals cafeteria style, and the room itself will seat 350 for simple stage presentations or musical programs.

Classroom interior walls are stain waxed plywood, an easy-to-clean, durable, and attractive surface. Work counters and storage cabinets vary in bright color. Chalkboards are coral color.

A 10' x 50' skylight glazed with heat and glare reducing glass toplights the Multi-Use room. End wall floor to ceiling windows look out on Mt. Tamalpais.

Construction Cost

Current construction costs indicate that the new units will run about \$14 per square foot including site utilities, paving and fencing.

ARCHITECTURAL RENDERING OF TOTAL DEVELOPMENT

SEQUOIA UNION SCHOOL

LEMON COVE, CALIFORNIA

Architects: ALLISON AND RIBLE

Associate Architects: ARTHUR KELLEY & JOSEPH P. KELLY

The site of this planned school development is about one mile southwest of the town of Lemon Cove in Tulare county, and being a Union School it serves a wide, rapidly expanding, rural community.

The presently completed Units include the kindergarten and two wings of standard classrooms, with one classroom temporarily being used to house the administrative facilities. Also included in this first Unit is the central heating plant.

The general construction makes use of 8-inch pipe columns at 16-ft. o.c. set in individual caissons and which not only support steel roof trusses but also individually assume full seismic resistance so

that all walls, both interior and exterior, are merely curtains to enclose the spaces.

The wide expanse of glass in classrooms occurs along the north side. An equal amount of glass area occurs on the South side, approximately one-third of which is under the covered passage and two-thirds of which is above the covered passage. As shown in the photograph on page 14, full entry of sunlight is allowed in the classrooms and is controlled only, but fully, at the classroom ceiling.

In the future, and as funds become available, it is contemplated to build one wing of standard classrooms, a homemaking and shops facility, a cafeteria with kitchen, administrative wing and facilities for bus loading and storage.

OUTSTANDING CERAMIC VENEER INSTALLATION by GLADDING, McBEAN & COMPANY

MODERN SHOW PLACE
VETERANS' HOSPITAL

UNITED STATES VETERANS' ADMINISTRATION

SEATTLE, WASHINGTON

Architects: NARAMORE, BAIN, BRADY & JOHANSON

Contractor: SOUND CONSTRUCTION CO.

By **ARTHUR W. PRIAULX**

. . . VETERANS' HOSPITAL

First view of the spectacular \$8,000,000 Veterans Administration Hospital atop Beacon Hill in Seattle is breath-taking.

Here Architects Naramore, Bain, Brady and Johanson have achieved beauty, symmetry and utility as they have effectively taken advantage of commanding height and coupled it with imaginative design.

Given complete freedom by the Veterans Administration they departed from conventional X, Y, H and T shaped structures and adopted a simple, straight-line plan. In this uncomplicated floor plan they have eliminated inside spaces and lost space. Every room looks out upon beautiful surroundings and not into some other part of the structure as in other types of structures.

It was determined that two nursing units per floor would accommodate the patients' needs, so this fact recommended the straight-line design as practical and desirable.

In order to open all rooms to light, air and view the designers used a continuous window plan. To achieve the continuous window the architects set the columns in with the spandrel beam hung far enough out to allow for a horizontal pipe space between column and wall. This allows for hot water heating distribution without vertical piping to interrupt the continuous windows.

The over hang of the continuous windows provides shade for patients. These concrete window

canopies on the south wall also point up the beauty of the structure and give an attractive illusion of depth.

The plan of the typical nursing unit is a straight line plan with the single rooms at the end. This is different from most Veterans Administration plans where the single rooms are usually in one wing and a 16-bed ward in another wing. In the Seattle hospital the wards have been broken down to 2- to 8-bed wards, eliminating the old, depressing 16-bed facilities. Half-height partitions divide the 8-bed wards into four sections which give patients considerable privacy.

The lines of the main slab structure were preserved by putting the single rooms at the ends of the building.

As far as the plan of the building is concerned, it is fairly obvious. The main entrance, outpatient entrance and the ambulance entrance are all accessible from one public approach. Every entrance is a grade level entry without steps. All vehicular traffic is kept to the north of the building with the southeast side free for patient use.

The structure is reinforced concrete with Ceramic Veneer exterior, and is designed for earthquake resistance of ten per cent of the dead load. Projecting parts from the main building are separated by two-inch crumble joint. Main building has been cut into three parts to provide for expansion and contraction.

Structure is heated by hot water mains which

VETERANS' HOSPITAL . . .

ABOVE—Typical private room in this ultra scientific and practical building, showing cheerful view from the window and some of the modern facilities at the patient's disposal.

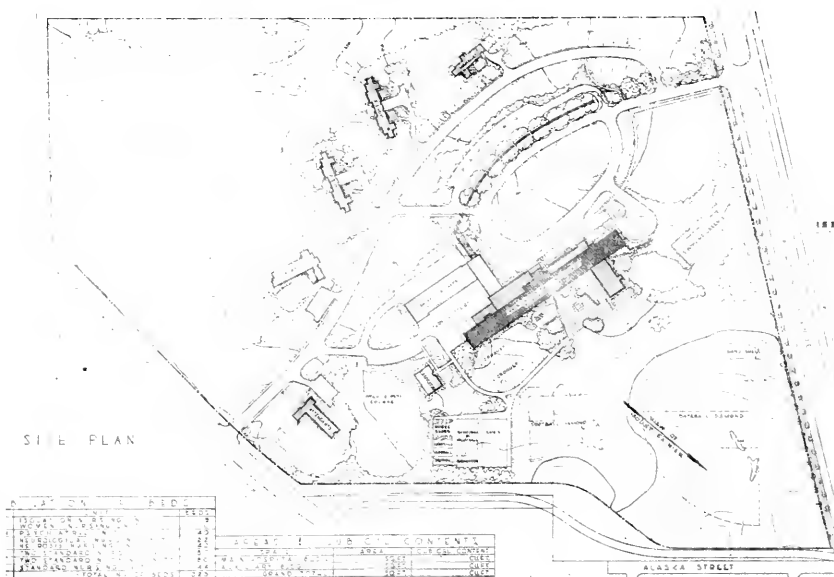

BELOW—Main entrance of the huge building is located at the ground level to facilitate ease in the movement of patients. The entrance opens from convenient driveway into friendly lobby and spacious waiting room.

ABOVE—View of one of the many private rooms showing placement of numerous auxiliary items for the convenience and pleasure of the patient. All rooms throughout the hospital have been designed for cleanliness and a minimum of maintenance requirements.

BELOW—Site Plan of the Hospital Building and adjacent grounds, showing parking, service court, residential, and recreational areas. Plan also shows roadways and paths serving the grounds.

VETERANS' HOSPITAL . . .

SUB-BASEMENT FLOOR PLAN

SUB-BASEMENT PLAN—Area contains engine and boiler room, utilities.

run horizontally at each floor and which upfeed to convectors. Mains are enclosed in space above the suspended ceiling between a spandrel beam and the outside building wall. Copper tubing connections are used for convectors for flexibility.

The building with several adjoining smaller auxiliary structures for nurses, attendants, garages, laboratory and athletic facilities cover a sweeping 43 acres. Since it is located on one of Seattle's

highest hills, water supply pressure must be pumped to a pent-house-located, water-storage tank. Fire protection water is provided in this storage as well as water for other purposes. Pressure tanks are used for augmenting pressure obtained by hydrostatic head.

Operating rooms are air conditioned and cooling is by means of direct expansion coils. Humidification is by grid-type humidifier in supply ducts.

BASEMENT FLOOR PLAN—Garages, shops, laundry, and personnel facilities.

BASEMENT FLOOR PLAN

SECOND FLOOR PLAN—General plan is carried throughout upper floors.

Supply duct reheat is electric, utilizing low-sheath temperature strip heaters, operated from a step controller, controlled by room thermostat.

Boiler plant is equipped with a complete set of steam-operated auxiliaries to prevent any cessation of heating equipment in case of electric power failure. Water supply in building is also from two sources of city water to assure continuous service.

Heating in the psycho sections of the building are by means of radiant heat panels in the floors and walls, using copper tubing imbedded therein.

Radio system is provided complete to each bedside, with provisions at each bedside for either pillow or stethoscope type listening speaker. Each speaker may connect by local selection to any of four channels.

FIRST FLOOR PLAN—General offices, admittance, laboratories, conference.

VETERANS' HOSPITAL . . .

LEFT — Radio Room where patients may have their own programs or receive programs from four network channels, is typical of the many specialty rooms where specific jobs are done for the patients' enjoyment and therapy.

BELOW—The Main Lobby of the hospital carries out the theme of informality and comfort.

RIGHT—Public Rooms like this library, are homey and inviting. Patient comfort is the watchword in every feature of this modern miracle building.

BELOW—Veteran guests may see television shows in this lounge room where they are made to feel at home. Continuous windows give spectacular view of surrounding country from almost every room.

A feature of the dividing partitions in the wards is a flush wall cabinet which opens into either side of the ward and which carries pressure piped oxygen and other similar facilities. Each patient also has a private utility panel in the wall at his bed head which contains outlets for electric lights, telephone, radio and nurses' signals.

Patient comfort is the dominant principle back of all features in this amazing building. Every care has also been taken in room design to insure maximum efficiency of the nurses and doctors without undue and needless exertion. There is a friendly, homey touch about the public rooms where ambu-

lant patients spend much of their time. The atmosphere of this remarkable building which contains 325 beds departs a long ways from the institution air found in so many buildings where such services are housed. The pace of the hospital is one of cheerfulness. Even snow-capped Mt. Rainier to the southwest has a friendly look from those spacious-windowed rooms.

Gross area of the large 11 level structure is 255,000 square feet. This includes the eight regular floors in the building, the pent house and the basement and sub-basement.

The sub-basement contains the heating plant

and the electrical control machinery. The basement for all practical purposes is a full scale floor and contains such facilities as laundries, kitchens, paint shops. The first floor is largely given over to staff offices, examination rooms, offices, chapel and receiving rooms.

The second floor is a specialty service room for the patients containing dining rooms, libraries, exercise rooms and a variety of treatment rooms and offices for specialists working with patients.

Third, fourth and fifth floors are devoted to general nursing and contain single rooms and wards. Surgical service and operating rooms are on the third floor. The sixth floor is given over to treatment of neurotic patients and the seventh floor is for quiet section and disturbed section. Here windows are guarded to prevent accidents.

Roof gardens and solarium sections are on the seventh floor. Eighth floor is used as a women's nursing unit and an isolation nursing unit.

The unit cost of the 325-bed structure is \$18,699.45 per bed based on the original contract price of \$6,077,320. Architecting and engineering on this most modern veterans hospital on the Pacific Coast was all handled by Naramore, Bain, Brady & Johanson, Architects of Seattle. General contracting was by Sound Construction Company, Seattle.

Probably one of the reasons why the Seattle Veterans Administration Hospital is so workable as well as handsome is that the architects had a great deal of flexibility and freedom from regulations which have since been adopted by the government's veterans' bureau.

SUGGESTIONS FOR

PLUMBING CONTRACTS

ADVOCATED BY NATIONAL PLUMBING BUREAU

Are you building a new house or modernizing the plumbing in an existing house or other building?

The Plumbing and Heating Industries Bureau lists some of the points that should be covered in your contract with the plumbing contractor:

1. A legal contract form suitable for the purpose should be selected and signed by the owner and plumbing contractor.

2. Before the contract is signed, the plumbing contractor should submit proof that he carries compensation and public liability insurance. If he does not, the home builder could be sued in the event of injury to a workman or someone else who happened to be on the premises. At the discretion of the owner, the contract may also provide for fire insurance and such other protection as the owner may feel necessary. The owner for instance, may want a contractor's bond guaranteeing performance and materials for one year.

3. The terms of the contract should call for all work to be done in accordance with an approved set of plans and specifications. On small remodeling jobs, these might be furnished for the approval of the owner by the plumbing contractor.

4. The plan should show the location of all plumbing fixtures, equipment, etc. The plan should also show the location and size of piping for sewers, soil stacks, vents, wastes, and water supplies. In larger operations, there is usually a pro-

vision in the specifications that, upon completion of the work, any changes from locations shown on original plans shall be indicated upon a revised set of drawings furnished by the plumbing contractor. Such a plan or drawing of the plumbing system is very helpful if it is necessary for a different plumbing contractor to make changes or additions to the system in the future.

5. The specifications should set forth the kind, type, and quality of materials to be used for the various kinds of work. If all new materials are to be used, this fact should be specified.

6. One of the points frequently covered in the specifications, particularly for larger houses, is that the plumbing contractor will prepare a valve chart indicating the location and purpose of every valve in the plumbing system. In addition, each valve should have a label or tag explaining its purpose.

7. After the work has been completed, the plumbing contractor should be able to offer proof that he has complied with the local plumbing code. This proof should be in the form of a certificate of inspection from the plumbing inspection department. The bill should not be submitted until the installation has been approved by the plumbing inspector and the contractor can submit proof of this fact.

8. The contract should also provide for the meth-

od of payment. The contractor should be required to furnish the owner with a waiver of lien to insure that all labor and materials supplied by the contractor have been paid in full.

9. The best assurance of a trouble-free plumbing installation is to get bid only from reputable plumbing contractors.

JOINS ARCHITECTURAL FIRM

Arthur D. Janssen, A.I.A., Architect and William H. Daseking, A.I.A., Architect, have announced the association of Walter L. Keller, Architect in the general practice of architecture, Menlo Park, Calif.

Architect Keller has been with the California Division of Architecture in Sacramento.

CONSTRUCTION ECONOMICS

HOW TO LOWER THE PRICE OF CONSTRUCTION

**By G. SZMAK, Executive Secretary
Construction Surveyors Institute**

Those in the Construction Industry should analyze the reason for its progress and prosperity or else must of necessity periodically investigate the causes of obstructing demand. This Industry, like others, is indirectly afflicted by external political conditions and malpractices. Directly it is affected by its own surveying, designing and constructing practices and operations. Naturally, to hold the market for construction, this Industry must also consider production costs and selling prices. Therefore, when there is a shortage of buyers, "How to lower the price of construction?" is a paramount issue.

Basically, the reason for a depressed demand for goods, commodities and services is the lack of consumer purchasing power due to maldistribution of compensation caused by short-circuiting the products through low wages, usurious interest charges and confiscatory taxation. However, since the correlation of production and distribution costs with consumption prices is not possible under political controls, regulations and malpractices, the only alternative for increasing the buying power is to reduce prices by all possible means. Lower prices do create some demand providing a spasmodic prosperity.

During periods of deflation, the tendency is to drop prices lower and lower. This is generally achieved by reducing the quality of production and thus decreasing currency circulation. Consequently, the standard of living is also lowered and the capital needed for providing abundance and prosperity is not enough. While during periods of inflation, even though construction costs are high, practically no effort is made toward economy in surveying, designing, constructing and in administering bids and prosecuting contracts. Rather, the practice is to carelessly pass on the higher costs to the consumer. Drawings and specifications are prepared without considering the cost of materials and labor incorporated in the design and construction.

It becomes the vogue to award loose Cost-Plus-Fee and Lump-Sum Contracts without pre-established unit prices that would limit the cost.

The constructors, of course, cannot build economically when projects are wastefully planned, specified and loosely awarded. Likewise, designers cannot prepare economic bidding and contract documents without proper preliminary Assays, Estimates, Quantity Analyses and Appraisals of the contemplated projects. Unless the designers have advance knowledge of construction costs, they cannot control the economy of their designs. Such information and data is provided by expert professional Construction Surveyors and is available to Architects, Engineers, Contractors and the public. Advance knowledge on detailed cost of a project will result in lower prices and prevent expensive dissensions and delays.

Those outside of the Industry are usually under the impression that designers and constructors are also surveyors. This leads them into making the error of overlooking the surveyors' services. The surveyors' skill, technology and economic knowledge, so essential for preparing a systematic analysis and appraisal of a project, is very different from the planning and executive skill and technology possessed by designers and constructors. It is obvious that three different experts would not be required if one could perform all three functions just as proficiently and economically.

Effective price competition is needed. There is a false competition when the bidders are only furnished plans and specifications from which they must each determine for themselves the quantity and quality of work to be done. Such competition is, in effect, one of quantity and quality, which nullifies the competition in price. Without furnishing a uniform purchase requisition to all the bidders, there cannot be true price competition or a sound basis for judging the most economical bid. Furthermore, bidding without a scientific purchase requi-

SAN DIEGO CHAPTER

Norman Kelch, A.I.A. Architect described the latest developments in grouted brick masonry and also presented a motion picture showing some of the best brick masonry buildings in southern California, at the December meeting held in the U. S. Grant Hotel.

A special report by Delmar S. Mitchell's committee indicated it was advisable to have ample sets of prints available prior to bidding and that unusual costs should be met by the owner. Study is also being made on the subject of signs being used by architects to advertise their business.

The annual Christmas Party was observed on December 28 with Dick Pinnell in charge of an unusually successful event.

GOLD MEDAL AWARD TO FRENCH ARCHITECT

The Gold Medal of The American Institute of Architects, its highest professional honor, will be awarded in 1952 to Auguste Perret, a French architect, according to Glenn Stanton, Institute president, and Portland, Oregon, architect.

The award will be made in person during the annual convention of the A.I.A. in New York City, next June, and is made in recognition of Perret's design of buildings in reinforced concrete.

ION LEWIS TRAVELING SCHOLARSHIP FOR 1952

The Managing Committee of the Ion Lewis Scholarship in Architecture has announced it will make an award of \$1000 to an eligible candidate during the Spring of 1952.

The Scholarship, founded under the will of the late Ion Lewis, pioneer Portland architect, is to be used toward the advancement of the profession of Architecture in Oregon. It is administered jointly by the School of Architecture and Allied Arts of the University of Oregon and the Oregon Chapter of the American Institute of Architects.

The basis of the award to be made this year will include character, ability and professional

promise, together with the candidates need for travel. Candidates must be under 30 years of age; a resident of the State of Oregon for at least one year; and must be an architectural student or draftsman. Applicants may obtain complete information by writing Dean S. W. Little, School of Architecture and Allied Arts, University of Oregon, not later than April 1, 1952. The award will be made on or before May 1, 1952.

JEANNETTE DOLSBERRY HONORED BY ARCHITECTS

Mrs. Jeannette Dolsberry, for 25 years executive secretary of the California State Board of Architectural Examiners, was honored recently by architects of California and the State Board at an honorary dinner at Arrowhead Springs Hotel.

President C. J. Paderewski of the Board presented Mrs. Dolsberry, who retired from her position in 1951, with a 25 year Certificate of Faithful Service signed by Governor Earl Warren and James A. Arnerich, State Director of Professional and Vocational Standards, and a set of matched luggage, gifts, and \$550, all contributions to a "tribute fund" developed by her many friends among the architects and architectural profession.

CENTRAL WASHINGTON ARCHITECTURAL SOCIETY

Ernest Greenwood, addressed the Central Washington Architectural Society, Yakima, on the subject "Designing a Building to Reduce Fire Hazards and Insurance Rates." Discussion included use of fire walls, fire doors, occupancy separation, and sprinkler systems.

ARCHITECT INSTRUCTS

Architect Ron Wilson, Seattle, is instructing a class in "Basic Design" at the evening classes of the University of Washington. Also offered at the night school is a class in advanced research.

HAROLD KING ELECTED PRESIDENT SOUTHERN CALIFORNIA ENGINEERS

Harold King, consulting structural engineer of Los Angeles, was elected President of the Structural Engineers Association of Southern California for the year 1952 at the organization's annual meeting in December.

Coming to California in 1931 from Pittsburgh, Penn., where he was associated with the McClintic Marshall Company following graduation from Iowa State College with an Architectural Engineering Degree, King was associated with L. M. Barcume until 1942 when he served in the Navy Civil

NEW OFFICERS: Seated, left to right, Harold King, President; C. M. Corbit, Jr., Secretary-Treasurer. Rear, left to right, Ben Beniolf, Vice-President and retiring director; Donald F. Shugart, immediate past president and newly elected president of the Structural Engineers Association of California; and Robert J. Short, retiring Secretary-Treasurer.

Engineer Corps. On his return from two years overseas service, King opened offices in Los Angeles for the practice of consulting structural engineer.

Other officers elected to serve during the ensuing year were: Ben Beniolf, structural engineer, Summerbell Roof Structures, Vice-President; and Charles M. Corbit, Jr., district engineer, American Institute of Steel Construction, Secretary and Treasurer. Two new directors were chosen, Joseph Sheffield and Henry Layne, consulting engineers, replacing directors John K. Minasian and Ben Beniolf.

Retiring president Donald Shugart reviewed efforts of the Association during the past year towards construction improvements, and Robert J. Short, retiring secretary, gave a closing financial report as part of the business meeting.

Guest speaker for the meeting was Vagtborg, Vagtborg Lift-Slab Corp., who explained with the aid of motion pictures, the engineering and mechanics of lifting floor and roof slabs 150 ft. x 50 ft. in area to roof and upper floor and roof steel

bers of the Los Angeles section of the American
Society of Civil Engineers at a recent meeting in
the Alexandria Hotel.

Inaugurating the society's centennial year the
life memberships were awarded to Francis Bates,
Charles Arthur Bissell, George K. Farmer, Julian
Hinds, Harry A. Hyman, Edwin A. Ingham, Wil-
liam D. Jones, Thomas A. Jordan, Claude L. Mc-
Kesson, George F. Nicholson, Harold K. Palmer,
Charles W. S. Sammelman, Charles C. Sharpen-
berg, Arthur Taylor and Leroy Whitney Arm-
strong.

Included in the evening's program was a dis-
cussion of "Structural Design for Earthquakes" by
Robert J. Kadow, George E. Brandow and M. J.
Skinner.

**BIG JOB AHEAD FOR ARCHITECTS
AND ENGINEERS IN CONSTRUCTION**

A recent conference on "Laboratory Design for
Handling Radioactive Materials", conducted by

the Building Research Advisory Board in Wash-
ington, brought out the fact that there will be an
increasing demand for the construction of build-
ings specifically intended to house the many
phases of atomic energy work. The rapid expan-
sion of radio isotope usage for agricultural, in-
dustrial and medical purposes has created a need
for establishing design criteria for such buildings;
and this Conference, jointly sponsored by the
American Institute of Architects and the Atomic
Energy Commission, was a large step in the direc-
tion of acquainting architects and engineers in
general with the specialized problems in this type
of construction.

NATIONAL PRESIDENT TO VISIT SAN FRANCISCO CHAPTER

Naughton Lane, president of the National Producer's Council, will pay us a visit on Friday, February 1st, during his annual visit to the West Coast. It is our intention to hold an evening meeting for Naughton to hear what I am sure will be a very interesting talk. I've heard rumors that this might possibly turn into a husband and wife meeting and, therefore, suggest that you folks watch the local papers for the final announcement of this meeting.

REGULAR CHAPTER MEETINGS

As mentioned in one of our previous Architect and Engineer pages, a full schedule of informational meetings is planned for the 1952 year. These meetings will start off with Panel No. 4, entitled "Classroom Daylighting," which will be shown on Monday, January 21st at the Palace Hotel. These panels are reportedly quite interesting and are sponsored by the Home Office of several of the

member companies of the Council. The panels are then moved throughout the chapters in the country, and the programs presented in full to the members of each of these local chapters. We are looking forward to a big attendance for this meeting as we feel that it will be something special and worthwhile seeing.

A second informational meeting of the year will be sponsored by Johns-Manville and held on February 11th. This meeting also undoubtedly will be held at the Palace Hotel, our regular meeting place.

HOLIDAY LULL

Just as with everyone else at this time of year, our chapter members and activities have bogged down due to the Holidays. We're all suffering from a case of over-indulgence of one sort or another and, therefore, the local news at this time is a bit scarce. We will be back next month, however, with a full page on what's doing with who and how come.

USE QUALITY PRODUCTS

CONSULT AN ARCHITECT

BIG JOB FOR ARCHITECTS

(From Page 29)

Much of the information disclosed at the Symposium had been of the classified nature prior to the meeting, and the AEC, well aware that the use of radioactive materials is spreading rapidly beyond the confines of its own sites, de-classified a large body of knowledge for use at this Conference.

In five intensive sessions, over a two-day period, the speakers illuminated the problems of laboratory layout and construction, shielding, surfaces and finishes, air supply and exhaust, and waste disposal. Flexibility of design was stressed heavily, with a number of speakers mentioning the advantages of modular design in such buildings. Standardization of both design and equipment was pointed out as not only desirable economically but more feasible than the many levels and varieties of this work seem to suggest.

Two somewhat differing but basic philosophies apparently lay behind most of the thinking of the Conference: the dilute, disperse and decontaminate philosophy (DDD), and a system in which the material is controlled and contained at its source, or the concentrate and contain philosophy (CC). Each of these systems demand a different approach to laboratory construction, and the determination of which is better seems to rest on the particular needs and resources of individual installations.

COURSE IN CONCRETE TECHNOLOGY BEING GIVEN IN SOUTHERN CALIF.

The University of California Extension, through its engineering division on the Los Angeles campus is presenting a special series of courses in concrete technology.

An outgrowth of a conference in practical concrete problems organized by the university in San Diego last fall, the instruction program calls for special classes in Los Angeles, San Diego, Rialto and Ventura.

The course in fundamentals of concrete is being given by Samuel Hobbs, field engineer with the Portland Cement Association as instructor.

STEEL AUTHORIZED FOR AIR LINE BASE

A permit has been authorized by the C. A. A. for steel to be used in the construction of new buildings at the United Air Lines maintenance base at San Francisco Municipal Airport.

Construction amounting to more than \$1,100,000 will include a new hangar building, engine over-

haul shop, and an addition to a warehouse building.

H. J. Brunnier of San Francisco is the Structural Engineer, for the work.

COLUMBIA STEEL AND GENEVA STEEL MERGE

A further step in simplifying the corporate structure of United States Steel was effected recently with merger of the Columbia Steel Company in California and Geneva Steel Company in Utah, to be known as Columbia-Geneva Steel Division of U. S. Steel.

Alden G. Roach will serve as president. He also serves as president of Consolidated Western Steel Corp.

In announcing the reorganization, Irving S. Olds, Chairman of the Board, U. S. Steel Corp., said the effort was designed to constitute another step in the continual process of keeping U. S. Steel as up-to-date as possible in all phases of its organization and operations. Such a program tends to reduce costs, facilitate and improve production, and will eventually benefit employees, customers and the public generally.

CONSTRUCTION ECONOMICS

(From Page 25)

sition creates an enormously wasteful duplication of surveys in addition to neglecting the main objective of competition, namely, securing economical bids.

Naturally, the most efficient and effective solution for solving the stability, progress and prosperity of all industries would be the economic correlation of production and distribution costs with the price of consumption. This can be achieved only by simultaneously increasing the quantity and improving the quality of production through a more equitable distribution of wealth. In the absence of a sound over-all basic economy, the following recommendations are made for reducing construction prices and preventing further inflation.

1. Abolish the increasing usurpation of political authority and power, in the guise of national emergency, now enslaving capital, labor and management and thereby eliminate the wasteful interference of bureaus and agencies with the operation of private enterprises. It is not the function of social governments to finance and build in competition with private enterprise. Public projects are usually constructed without cost limitation and tax free at public expense, thereby doubly inflating construction prices.

2. Formulate and establish more uniform building codes without wasteful outmoded structural requirements. Incorporate maximum safety and protection against the elements and other hazards.

3. Provide open bidding and free competition in materials and labor by abolishing monopoly in both fields. Economic methods in securing bids and awarding contracts should be made available to the buyer. This will increase the effectiveness of price competition. Wasteful Lump-Sum and Cost-Plus-Fee Contracts should be abandoned and replaced by Unit Price Contracts that secure maximum competition and economy. The unit price

method allows flexibility for modifications with positive cost control.

4. Establish better coordination of functions and cooperation between surveyors, designers and constructors to improve construction methods and practices.

5. Provide better correlated plans and specifications. Eliminate unessential alternates and separate estimates. If alternate estimates are absolutely necessary, they should be additions to the main bid rather than deductions which do not allow full credit.

6. Institute direct consumer to producer buying and selling without the useless intermediate agencies that inest industry. Through the use of scientific purchase requisitions, construction materials and labor may be bought from the producers at more economical prices.

7. Consult a professional surveyor first to avoid wasteful design and construction. Prevention is more economical than cure.

Construction experts claim that a 20 to 40 per cent reduction can be made in the cost of construction through elimination of prevailing material and labor wastes. By abolishing the tenfold duplication of surveys prepared by bidders, a professional survey solves the shortage of proficient estimators, analysts and appraisers and will reduce costs at least 10 per cent. This is the largest single price reduction available which also increases quantity and improves quality of construction.

LOS ANGELES ANTICIPATES SUBDIVISION EXPANSION

Leo Strecker, president of the Engineers and Surveyors Association of California, predicted at the organization's annual meeting in Los Angeles recently, that the subdivision of Los Angeles County land, including cities and unincorporated areas, will reach over 19,000 acres, or approximately 60,000 more lots during the year 1952.

Speaking on "How Engineers and Surveyors Can Help Improve Title to Property" Jack D. Finch, vice president and land title official discussed a number of phases of land titles.

The association, whose members account for about 90 per cent of large subdivision layout work, is only a year old and is comprised of civil engineers and land surveyors in southern California.

OPENS ARCHITECTURAL OFFICE

Announcement has been made of the opening of offices in Los Angeles by Architect John Mead Scheidemen for the general practice of architecture. The new offices are located at 7024 Melrose Avenue, Telephone WHitney 7191.

CLASSIFIED ADVERTISING

Do YOU want to hire, buy, sell, rent, find, lose, and otherwise transact business with others in the Construction Industry? If so, your best bet is a CLASSIFIED ad in ARCHITECT & ENGINEER magazine.

SELL that used equipment at a good price; secure competent employees; buy good used equipment; obtain information on wanted materials, etc.

Rates are low 20 cents per word—cash with order—minimum 3 lines. "Position Wanted" ads are half-rate.

CO-EDS GET MODEL HOME FOR SOCIAL LIVING STUDY

Co-eds on the Los Angeles campus of the University of California will have a model home as their laboratory for studying social and group living.

Construction has begun on a \$50,000 modern building which will contain three bedrooms, a sewing room, an ultra-convenient kitchen, dining-living room, and an apartment for the house director.

The house-laboratory will provide residence for six senior home economics students for a training period of six weeks. Thus, three groups of students will live in the house each semester.

This facility is for the purpose of training future home economics teachers. They will learn to manage a home for social and group living on a family scale, actually performing, under supervision, the most advanced methods and theories of living.

James E. Westphall, project architect with the office of architects and engineers at the U.C.L.A., has designed the home to promote the California outdoor living theme, with sliding glass doors opening onto a large patio from both living and dining areas. Furnishings will follow the contemporary style.

The building contains 3,000 sq. ft. and will be finished with a combination of redwood, stucco and concrete block. Interiors will feature plastics, wood-paneled walls and plaster, while the roof will be crushed red tile. Open beam ceilings will prevail throughout.

Executive architect for the unit is Burnett C. Turner, A.I.A., and Welton Becket and Associates are the supervising architects.

ARCHITECT NAMED DIRECTOR SF CHAMBER OF COMMERCE

Among the outstanding business and professional men elected to serve the San Francisco Chamber of Commerce as a Board of Directors, is William G. Merchant, A.I.A. Architect.

Architect Merchant has long been identified with civic affairs and improvements in San Francisco.

PROGRAM FOR THE PLANNING OF DEFERRED PROJECTS

Alameda county, California, may be the testing ground for a community deferred-project planning program advocated by the California Council of Architects, according to a recent announcement by John L. Rex, Council president.

The program recently submitted to all local A.I.A. Chapters is being considered jointly by the East Bay Chapter, A.I.A., the East Bay Structural Engineers Association, and the Construction Industries Committee of the Oakland Chamber of Commerce.

Notes on Quality LIGHTING:

Here in the West the installation assuring maximum lighting efficiency with minimum service and maintenance is, by every standard of comparison, SMOOT-HOLMAN. The hallmark of quality in better buildings is the presence of SMOOT-HOLMAN equipment.

The New D-P Seal-Lux, pictured above, is a vapor-tight fluorescent luminaire built for high efficiency and rugged service life under the most exacting conditions.

SMOOT-HOLMAN COMPANY Engineered Calif. Offices in Principal Western Cities • Branch and Warehouse in San Francisco

Working with representatives of the Construction Industry are three members of the California State Assembly Committee on Conservation and Planning: Randal F. Dickey, Chairman, Francis Dunn, Jr., and L. H. Lincoln, all of Alameda county.

While the project is in its exploratory stage, indications are that some consideration may be given by the 1952 California Legislature to approve funds for future planning of State and local projects.

KATE NEAL KINLEY MEMORIAL FELLOWSHIP ANNOUNCED

The Board of Trustees of the University of Illinois have announced through its Committee in charge, the twenty-first annual consideration of candidates for the Kate Neal Kinley Memorial Fellowship.

The Fellowship was established by the late President-Emeritus David Kinley in memory of his wife and in recognition of her influence in promoting the Fine Arts and similar interests upon the Campus of the University of Illinois, and yields the sum of one thousand dollars to be used by the recipient toward defraying the expenses of advanced study of the Fine Arts in America or abroad.

The Fellowship is open to graduates of the College of Fine and Applied Arts of the University

of Illinois and to graduates of similar institutions of equal educational standing whose principal or major studies have been in one of the following:

Music—all branches; Art—all branches; and Architecture—design or history.

Applicants should not exceed twenty-four years of age on June 1, 1952. Applications should reach the Committee not later than May 15, 1952.

AGC REQUEST LEGISLATION TO OFFSET SUPREME COURT DECISION

H. E. Foreman, managing director of The Associated General Contractors of America, has made public the content of identical letters to Chairman Pat McCarran and Emanuel Celler of the U. S. Senate and House Judiciary Committees, in which the association requests legislation to offset a recent Supreme Court decision which has a widespread effect on contracts with the Federal government.

The letters outline the reasons why there is an immediate need for legislation by Congress to clarify the provisions of federal construction, and procurement, contracts which were so limited by a recent Supreme Court decision as to prevent judicial review of findings of fact by the head of a department, except in cases where fraud on the part of the government can be alleged and proved.

Legislation is recommended as beneficial both to the government, and to business organizations which undertake work for the federal government by contract.

The Supreme Court decision was in the case of The United States, Petitioner, v. Martin Wunderlich, Ann M. Wunderlich, Maris Wunderlich, et. al., No. 11, October Term, 1951. The decision was handed down November 26, 1951.

In essence, the Supreme Court further limited the interpretation of Article 15, the disputed article of the standard government construction contract, to mean "The decision of the department head, absent fraudulent conduct, must stand under the plain meaning of the contract." The Court further stated: "By fraud we mean conscious wrongdoing, an intention to cheat or be dishonest."

The decision, as Justice Douglas stated in his strong dissent, has "wide application and a devastating effect." The decision gives the contracting officer, who is normally supported by the government head, absolute authority to determine facts relating to execution of the contract. In effect it prohibits review of a dispute by the courts, for it obviously would be impossible to allege and prove fraud upon the part of the government in the terms stated by the Supreme Court.

The decision has been receiving a great amount of study. While it theoretically might be possible to change the terms of the standard government con-

tract by administrative or executive action, there is no assurance that such action would be taken by government departments generally, uniformly, or consistently.

It is the conclusion of the association that legislation is needed at an early date if the best interests of the United States and its contractors are to be appropriately safeguarded and preserved.

Justice Minton, in the majority opinion, stated in part: "If the standard of fraud that we adhere to is too limited, that is a matter for Congress."

In the belief that remedial legislation would be referred to the Judiciary Committee for its consideration, the AGC has recommended introduction of a bill embodying the following general principles:

1. That any government contract, regardless of the language of the contract itself, shall be subject to appeal to appropriate courts from rulings of the contracting officer or the head of the department both as to matters of fact and law.

2. That all existing contracts be modified accordingly.

3. That any matters growing out of government contracts, which were legally in process at the time of the decision, have their status renewed as of the date of such decision, and that the contract be construed in accordance with the principles set forth in 1 and 2.

OPENS REMODELED STOCKTON BUILDING

The Security Title Insurance and Guarantee Company recently opened remodeled offices in Stockton.

Occupying 10,000 sq. ft. the new building is flanked by a 50-car parking lot. Large display windows at the front of the building are set off by decorative brick work.

Shepherd & Green of Stockton were the general contractors.

COPPER COMPANY BUILDS COMPLETE MINING TOWN

The Anaconda Copper Mining Company of Butte, Montana, have started construction of an entirely new mining town near Yerington, Nevada.

Preliminary construction, amounting to more than \$2,500,000 will include 235 residences, dormitories, a mess hall and water, sewer and roads.

The buildings will all be of frame construction.

BOOK REVIEWS PAMPHLETS AND CATALOGUES

EVERYTHING IN IT IS YOU—A Handbook for Homemakers.
By Francis deN. Schroeder. John Widdicombe Co., Pub-
lishers, New York. Price 10c.

Francis deN. Schroeder is probably the wisest, wittiest writer on home furnishings in America today. The entire interior decorating field is covered, some parts of it in surprisingly thorough detail, and the author has pursued the theory that your home must in every way be a reflection of your own tastes and needs.

A section is devoted to period furniture; another on how much to spend; setting up a floor plan; quality; colors; and the concluding chapter is on lamps, pictures and accessories.

STATE BUILDING CONSTRUCTION CODE—Applicable to One and Two Family Dwellings. By State Building Code Commission of New York. 1740 Broadway, New York City.

Building codes originate with the duty of the government to protect people in matters of safety, health and welfare. Building codes are enacted as a guide for those who build, and as a protection for every one who uses buildings. Most of the existing codes are old and were written when it was necessary to specify in great detail types of materials, their dimensions, and methods of construction.

State of New York, through the State Building Code Commission, has attempted in this, the first Chapter of the State Building Construction Code, to prepare a performance code which will encourage the free exercise of ingenuity in design and at the same time retain the fundamentals of assuring public safety, health and welfare in all construction. This particular issue of November 1, 1951 deals with one and two family dwellings. Other chapters applicable to other types of buildings will follow.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request or indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

338. CONCRETE TESTING MACHINE. Concrete Testing Machine. Baldwin concrete testing machines of 100,000 lb. capacity are presented in a new bulletin. The bulletin covers features, including hydraulic loading, independent hydraulic load weighing, accessories and specifications. No. 327, 2 pages, illus.

339. PORTABLE STEEL BLEACHERS. Seating, Incorporated, national bleacher manufacturers have issued a descriptive two-color brochure on SICO Portable Steel Bleachers. The brochure, 8 1/2 x 11", outlines outstanding features of the equipment, including the unique "4th Man Feature" design principle, and details various engineering factors of safety, comfort, expandability and portability. KPC-12/51.

340. MANUFACTURED MOULDINGS. The 1952 National Store Fronts Company's A.I.A. catalog is now available for architects and store front erectors. Containing detail drawings of all mouldings manufactured by National. 12/51.

341. TOILET COMPARTMENTS. Full information on the new Sanymetal Non-metallic, Hardboard Flush-Type Toilet Compartments, is given in a bulletin now available through The Sanymetal Products Co., Inc. The bulletin describes this new compartment made of a combination of non-metallic materials for all installations where steel compartments cannot be furnished, and gives complete specifications. A.I.A. File No. 45-H-6, 6 pages, illus. 12/7 51.

342. ELECTRIC WALL AND PORTABLE HEATERS. All models of Electromed all-electric domestic heaters are described in a new General Line Folder, envelope stuffer size, and printed in two colors, which has just been issued. The folder gives complete specifications, illustrations and suggested uses for wall-type and portable home heaters. EC-111, 12/51.

343. VENTILATING HOODS. The Best Way to Ventilate a Kitchen catalog gives details of the newly redesigned Stanthony Ventilating Hoods. Shows photos of the two new styles, modern and copper provincial, gives range of colors available, with complete specifications of the hoods and blower units. The new hoods fit under standard cabinets over the range and the

manufacturer claims higher efficiency because of closer proximity of the hood to the range. Roughing-in details and dimensions are given for undercabinet installation with standard venting through one half of cabinet. A.I.A. 30-D-1, 4 pages, illus., 12/51.

344. TEMPERATURE CONTROL BULLETIN. Indoor-outdoor temperature control, the Weather-Flo, is described in a new bulletin. All details are given of construction and operation of this control which anticipates weather changes and adjusts heat input accordingly. Instructions tell how to adjust the temperature control when installing it and how to make any desired changes quickly—without the need for engineering calculations. Sketch shows how Weather-Flo control is installed. A-751, 4 pages, illus., 12/31 51.

345. FLINTKOTE DIGEST. Flintkote Industrial Products Digest—a pocket-size, illustrated booklet briefly describes many of the standard and specialized products comprising The Flintkote Company's products for industry. The Digest is intended to serve as a guide to specific as well as custom formulated asphalt emulsions and cutbacks, asphalt, rubber and resin adhesives, coatings and sealers. The fields of protective coatings, flooring binders and cements, underlayments for decorative floors, sound deadener and insulating compounds, sealers for joints in concrete pavement, packaging specialties, sizes and laminates for fibreboard and many other items are described. 24 pages, illus., 12/51.

PERMANENTE HOSPITAL FOR SAN FRANCISCO

The Permanente Foundation Hospital, with general offices in Oakland, reported recently that the architectural firm of Wolf & Phillips of Portland, Oregon, were completing drawings and specifications for a 210-bed new Hospital Building in San Francisco.

The new hospital is to be located on Geary Blvd., between Lyon and St. Joseph Avenues. Estimated cost is \$2,300,000.

ARCHITECTURAL FIRM CHANGES NAME

The architectural firm of Sutton, Whitney & Aandahl, Portland, Oregon, has changed its name and on January 1st became the firm of Whitney, Hinson & Jacobsen, A.I.A. Architects, according to an announcement by Harrison A. Whitney, A.I.A.

The firm is one of the best known architectural organizations in the Northwest and maintains offices at 512 Failing Building in Portland.

A total of 197,493 food waste disposal units were made in the first six months of 1951 as compared with 105,573 for the same period in 1950. About 70 per cent of the total 1950 production was installed in new homes. Los Angeles leads the nation in installations.

INTERNATIONAL ORGANIZATION FOR STANDARDIZATION MEETS

The International Organization for Standardization will hold its triennial meeting at Columbia University in New York City early in June according to a recent announcement.

Delegates from the 32 member nations are expected to take part in the General Assembly.

The ISO is the international clearinghouse for the national standards bodies of most industrial countries, and is recognized by the United Nations as the authoritative channel through which standardization on an international level is carried out. Seventy-six technical committees are now working on projects in such fields as screw threads, plastics, packaging of frozen foods, iron and steel, textiles, gears, laboratory glassware, rubber, radio communication, graphic symbols, materials handling, and transfusion equipment for medical use.

WEST COAST MANAGER ATTENDS EASTERN MEET

Thomas B. Jordan, manager of the Mosaic Tile Company's West Coast Division with offices in Los Angeles, attended his company's annual sales meeting in Zanesville, Ohio, early in December.

Jordan, with other western representatives; Ralph Fair, Allen Gellart and Emmett Wiles of Los

Angeles; L. E. Guerra, San Francisco; A. C. Osborne, Portland; and Horace W. Miller of Seattle, toured the Southwest enroute to the eastern conference.

RESIDENTIAL UNITS FOR SACRAMENTO

Ronne, Ronne & Ronne, Sacramento home builders, recently announced the construction of seventy new homes in the area of 58th street and 17th avenue in the City of Sacramento.

Of frame and stucco construction each residence will cost approximately \$8,000.

ELECTED PRESIDENT AMERICAN BITUMULS

C. W. Turner, Honolulu district manager for the Standard Oil Company of California, has been elected president of the American Bitumuls and Asphalt Company, a subsidiary of the Standard Oil Company of California.

C. W. Stewart, who has been serving as president of the company, has been named vice-chairman of the board of directors, a newly created job.

Offices of the firm are located in San Francisco.

DENVER FIRM GETS WACO FRANCHISE

Professional Paints, Inc., Denver, has been granted exclusive rights for "Waco" brand sectional steel scaffolding equipment in Colorado, four southern Wyoming counties and western Kansas.

A separate Waco division has been established in Denver with Edward Madigan, president, and Alvin D. Lichtenstein and Martin Trotsky executives. Bud Rifkin has been named Denver representative.

ALASKA CONSTRUCTION

The Denali Construction Company of Anchorage was awarded a \$2,108,000 contract for the construction of Automotive Facilities at the Elmendorf military center.

LOW RENT HOUSING

The Housing Authority of Fresno County has started work on the construction of a 24-unit low rent housing project at Huron. Buildings will be of frame and stucco construction, according to architects Stevens & Clark of Fresno.

ARCHITECT OPENS OFFICE

Chester R. Phillips, A.I.A., Architect, formerly associated with Robert Stanton, A.I.A. Architect, Carmel, California, has opened offices for the general practice of architecture in Robles del Rio, California.

The new offices were opened on January 1, 1952.

Prepared and compiled by:

CENTRAL CALIFORNIA CHAPTER, ASSOCIATED GENERAL CONTRACTORS OF AMERICA, with the assistance and cooperation of secretaries of General Contractors Associations and Builders Exchanges of Northern California; and the above information for southern California is furnished by the Labor Relations Department of the Southern California Chapter, ASSOCIATED GENERAL CONTRACTORS OF AMERICA.

SOUTHERN CALIFORNIA HOME DEMANDS WILL CONTINUE

According to Mark A. Thoreson, newly elected president of the Home Builders Institute of Los Angeles, home ownership is the goal of most southern California families and as a result the demand for residences will remain great during 1952.

Homebuilding will be subject to increased costs and building material problems may arise, however, Thoreson believes that housing requirements for defense workers, military personnel and civilians will be adequately provided. In addition rehabilitation of blighted areas will receive considerable study as the home building industry will encourage eradication of slum areas and sub-standard dwellings by private enterprise, consistent with the emergencies of the nation.

Thoreson also pointed out that the cost of shelter is taking less and less out of the family budget dollar, as government figures show that during the 1935-39 period 18.1 per cent was spent for shelter while in current period only 11.2 per cent goes for shelter.

PITTSBURG-CAMP STONEMAN AREA NAMED CRITICAL DEFENSE HOUSING

Certification of the Pittsburgh-Camp Stoneman area as a critical defense housing area for suspension of housing credit restrictions, more liberal mortgage insurance benefits and other housing aids under Public Law has been announced by the Defense Production Administration.

The area designated includes the cities of Antietam, Concord, and Pittsburgh which had a population of 87,000 in 1950, and a recent survey shows that housing development in the community has not kept pace with expansion at Camp Stoneman and several industrial plants.

NAMED TO U. S. STEEL PUBLIC RELATIONS

Julian Street, Jr., one time secretary of the New York Museum of Modern Art, has been appointed a special assistant to the U. S. Steel Corp., New York Public Relation Staff, according to a recent

announcement by J. Carlisle MacDonald, assistant chairman of the board.

Street has also served in numerous government agencies in Washington, D. C., and at the time of his appointment to the staff of U. S. Steel, was serving as information officer of ECA in Paris.

LOS ANGELES BUILDERS EXCHANGE NAME OFFICERS

Ray A. Myers, general building contractor, has been elected president of the newly organized Los Angeles Builders Exchange.

Other officers elected to head the new construction industries group are George F. Allison, Barber-Colman Company, vice president; G. Floyd Rice, Thompson Glass and Paint Company, Secretary; Haylett B. Shaw, Overly Mfg. Co., Treasurer; and William K. Wright, manager. Ben Fallgren, Clifford Monk, Ed Herlocker, Henry L. Wright, and Barrett Hannawalt were named to the Directorate.

The Exchange will open a new plans room, clearing house for architects' and engineers' plans and specifications in the near future.

HILLYARD RELEASES NEW TYPE PLASTIC SEAL

A sensational new penetrating seal called HIL-TEX has just been released by the Hillyard Chemical Company of St. Joseph, Missouri, following many years of research in the company's laboratories and extensive field testing through more than 100 divisional field offices.

The new product is the answer to management's need for a simplified and economical method of resilient floor care; for a safer maintenance product to protect newer types of sensitive floor coverings; for a means of preserving color and beauty through the years.

Resistant to oils, grease, fats, alcohols, water, soap and a great number of aliphatic hydrocarbons such as gasoline, mineral spirits, paraffin oil, HIL-TEX is not affected by acid or alkaline salts present in certain flooring, ozone in the air, the fading action caused by Ultra Violet light.

How to place telephone outlets to protect home's future beauty

You protect the beauty of home interiors by providing for extra telephone outlets in the plans. Current building practices, such as the reduction in size or omission of inside trim, make future installation of telephone facilities difficult. But concealment of facilities is assured when built-in conduit is indicated in blueprints.

Plan for telephone service where the users will spend most of their time. Low-cost facilities for concealed wiring are easy to install, mean extra client satisfaction. New telephones can be added without running wires along the walls or floor. For free help in planning, call your local Pacific Telephone office, ask for "Architects & Builders Service."

Put built-in telephone facilities in your plans

IN THE NEWS

NEW FACTORY FOR SOUTHERN CALIFORNIA

A new \$500,000 building has been opened for the Rose Marie Reid, swim suit manufacturer, in the International Airport Industrial area of Los Angeles.

Containing 67,000 sq. ft., the building was designed by architect S. Charles Lee.

Factory and executive offices are decorated in pastel colors, and among features of the building is a cafeteria serving 700 employees that opens onto a pool-side patio. The swim pool serves as a testing laboratory as well as a recreation attraction for the firm's employees.

ARCHITECT SELECTED

The architectural firm of Spencer & Ambrose, San Francisco, has been selected by the Housing Authority of the City and County of San Francisco, to draw plans for a 608-Unit low-rent housing project.

To be located at Turk and Eddy, Laguna and Buchanan, and Pierce and Divisadero streets it is estimated the project will cost some \$6,000,000 to construct, and will consist of multi-story apartment buildings.

NAVY GRADUATE ENGINEER SCHOOL

Plans have been announced by the U. S. Navy, Public Works Office, San Francisco, for the construction of a new Navy Graduate Engineering School at Monterey as a part of the U. S. Naval School there.

Estimated cost of the work is \$5,000,000. Skidmore, Owings & Merrill, San Francisco, are the architects.

NEW FACTORY FOR OAKLAND

A certificate of necessity has been granted for the construction of a new factory building in East Oakland for the General Metals Corporation.

Approximate cost of the new building is \$1,500,000.

ARCHITECT FOR HOSPITAL

Architect Erling Olafson of Sacramento has been selected by the City of Roseville (California) to develop plans for a 24-bed Municipal Hospital to be built in Roseville.

It is estimated the new hospital will cost \$250,000.

BECHTEL CORP. NAMES JOHN L. SIMPSON

John L. Simpson, director of the Bechtel Corporation since 1915, has been named Chairman of the Finance Committee, according to an announcement by S. D. Bechtel, president of the company.

He has resigned his position as Executive vice-president of the J. Henry Schroder Banking Corporation and the Schroder Trust Company of New York, with which he has been connected since 1925.

Simpson will make his headquarters in San Francisco.

NEW COUNTY OFFICE AND COURT ROOMS

The Board of Supervisors of Contra Costa County have commissioned Architect Donald L. Hardison at Richmond, to draw plans for a new County Office and Court Room Building to be built in the City of Richmond at a cost of \$800,000.

The three story building containing a basement, will be 62 ft. x 242 ft. dimension and will be erected in the city's new Civic Center.

MARIN COUNTY SHOPPING CENTER

The Schultz Company of Greenbrae, Marin County, has announced the appointment of the architectural firm of Gruen & Krummick of Los Angeles and San Francisco, to draw plans for the construction of a new Shopping Center comprising a super market and four stores.

The new center is to be built in Greenbrae on the San Francisco-Duke Boulevard.

ENGINEER SELECTED

The Engineering firm of Sverdrup & Parcel, Inc. of San Francisco has been chosen by the U. S. Navy, Bureau of Yards and Docks, to design additional aviation facilities at the Fallon, Nevada, Naval Auxiliary Air Field.

Cost of the planned improvements will be approximately \$3,000,000.

WRECKING STORES FOR GARAGE

The old Lick Building, between Post and Sutter streets, San Francisco is being razed preparatory to the construction of a modern, three story and basement and roof, garage.

Elisen & King are the Structural Engineers. The building will be of concrete, prestressed concrete girders, and a central ramp of Lick Place.

POLICE STATION REMODEL PROJECT

The City of Bakersfield will spend \$85,000 remodeling the old St. Francis School into a new police station, according to Robert N. Eddy, architect, who has been commissioned by the City to draw plans and specifications for the project.

MEDICAL CENTER AT EL MONTE

The El Monte Medical Center is doubling its capacity by the addition of a new two story wing and additional hospital facilities at an estimated cost of \$500,000.

T. W. Nibacker of Huntington Park is the architect.

LOW INCOME HOUSING

The Housing Authority of the City of Richmond has commissioned architect Donald L. Hardison of Richmond, to draw plans and specifications for the construction of a 300-unit low income housing project on Easter Hill in Richmond.

Of frame and concrete block construction the project will cost an estimated \$2,000,000.

COURT HOUSE ADDITION

The Kern County Board of Supervisors has commissioned architect Ernest L. McCoy and Francis Parsons of Bakersfield, to draw plans and specifications for the construction of an addition to the Court House in Bakersfield.

The Board has approved an expenditure of \$800,000 for the project.

SORORITY HOUSE FOR BERKELEY

The Alpha Gamma Delta sorority has announced plans for the construction of a new three-story and basement Sorority House in Berkeley to serve members attend-

ing the University of California.

Ponsford and Price, architects of Oakland, have been commissioned to draft plans for the building which it is estimated will cost \$200,000 to build.

ARCHITECT FOR SCHOOL

The Flowery Union Elementary School District, Fletters Springs, Sonoma County, has commissioned Architect C. A. Caulkins, Jr., of Santa Rosa to design a 4-classroom, administration and toilet room New Elementary School building in Fletters Springs.

LOS ANGELES INDUSTRIAL

Construction has begun on 15 light industrial buildings which will complete development of the 95 acre Los Angeles International Airport Industrial Tract at Aviation and Century Blvd., being developed under sponsorship of the Hayden-Lee Development Company.

The project represents a development of more than \$15,500,000, contains 55 buildings, most of which have been designed by architect S. Charles Lee, and was started less than 15 months ago.

INDUSTRIAL PLANT FOR ORANGE COUNTY

A \$3,500,000 electrical motor manufacturing plant is scheduled to be built in Orange County during 1952 by the U. S. Electrical Motors, Inc.

Site for the new manufacturing plant is an 85-acre plot midway between Anaheim and Buena Park some twenty miles from downtown Los Angeles. Construction will include a 50,000 sq. ft. administration building and 250,000 sq. ft. of covered manufacturing area.

Marsh, Smith & Powell of Los Angeles are the architects.

ELEMENTARY SCHOOL ARCHITECT CHOSEN

The architectural firm of Koblik & Fisher, Sacramento, has been chosen by the Thermalita Elementary School District in Butte County, to draw plans and specifications for a new Elementary School building near Oroville.

Of frame and stucco construction the new building will cost approximately \$326,000.

NEW LIBRARY FOR STOCKTON

The City of Stockton has commissioned architect Peter L. Sala of Stockton to draw plans and specifications for the construction of a new Library Building.

Estimated cost of the 2-story and basement, reinforced concrete building is \$1,250,000.

SUNDAY SCHOOL FUNDS RAISED

A campaign designed to raise funds for the construction of a Sunday school building in conjunction with the Methodist Church in Woodland has resulted in a fund of \$60,000.

Work will start immediately.

ARMY HOUSING AT TRACY

Under provisions of the Wherry Act, a group of 52-units are being constructed at the Sharp General Depot, Tracy, California, comprising 8 one-bedroom multiple units; 32 two-bedroom single units, and 12 three-bedroom single units.

Similarly a group of 44 housing units

Thinking of Building?

From our cost records and experience, an advance estimate may be made from decidedly general information. Based on our knowledge of labor and material costs, gained on current jobs, such an estimate may be helpful in determining your construction program.

are being built at Lathrop to serve the same Depot. The Lathrop project consists of 6 one-bedroom multiple units; 28 two-bedroom single units, and 10 three-bedroom single units.

Barovetto and Thomas of Sacramento are the architects.

NEW SURFACE THERMOMETER

A new surface temperature thermometer for fast and accurate checking of the outside temperature of pipes, plastic dies, and rubber molds; for checking external temperatures for wall leakage of refrigerators, cold chambers, and freezers; for checking the temperature of journals and other bearings, electric motors, and cylinder blocks;

also for checking residential and industrial wall, ceiling and floor temperatures has been announced by the Pacific Transducer Company of Los Angeles.

The instrument is easily affixed to any flat surface. Its range is from 0 to 300 degrees F., calibrated in 2 degree increments.

OPENS NEW BRANCH STORE IN OMAHA

The Jamison Cold Storage Door Company of Hagerstown, Maryland, has opened a new direct branch office in Omaha, Nebraska, under direction of A. C. Hoffbauer.

Nebraska, South Dakota and Iowa will be served by the offices.

CHAPEL FOR FRESNO

The Roman Catholic Diocese of Monterey-Fresno, is building a new Chapel at St. Johns Cathedral in Fresno according to a recent announcement.

Midstate Construction Company is the contractor and cost of the work is estimated at \$100,000.

GOVERNMENT HOUSING

The U. S. Corps of Engineers in San Francisco has announced start of construction of 125 housing units at the Sierra Ordnance Depot at Herlong in Lassen County, California.

Ferris & Erskine of Reno, Nevada, are the architects; and the Sierra Homes Inc., Reno, is the sponsor of the project which is estimated will cost \$1,245,755.

SANTA CRUZ BRANCH BANK

The First National Bank of Santa Cruz County has purchased a site in the City of Santa Cruz for erection of a new, modern, branch bank building.

Estimated cost of the project is \$100,000.

FOUR MODERN INTERIORS

FEBRUARY

DESIGNED BY KLAUS PEPER

1952

THE LONG AUGUST NIGHT WAS HOT—but not as hot as the bitter fighting that raged about Agok, Korea, in the Nakdong River area. Sergeant Kouma, serving as tank commander, was covering the withdrawal of infantry units from the front. Discovering that his tank was the only obstacle in the path of an enemy breakthrough, Sergeant Kouma waged a furious

nine-hour battle, running an eight-mile gantlet through enemy lines. He finally withdrew to friendly lines, but not until after his ammunition was exhausted and he had left 250 enemy dead behind him. Even then, although wounded twice, he attempted to resupply his tank and return to the fighting.

"A withdrawing action is not my idea of how Americans should fight," says Ernest Kouma. "If we must fight, let's be strong enough to take the offensive. In fact, *if we're strong enough*, we may not have to fight at all. Because, nowadays, *peace is for the strong*."

"So let's build our strength—to keep a strong America at peace. You can help by buying Defense Bonds—as many as you can afford. It's far less painful to build for peace than to destroy in war. And *peace is what you're building when you buy Bonds*."

M/Sgt. Ernest R. Kouma

Medal of Honor

Remember that when you're buying bonds for national defense, you're also building a personal reserve of cash savings. Remember, too, that if you don't save regularly, you generally don't save at all. So sign up today in the Payroll Savings Plan where you work, or the Bond-A-Month Plan where you bank. For your country's security, and your own, buy United States Defense Bonds now!

Peace is for the strong...
Buy U. S. Defense Bonds now!

EDITORIAL NOTES

DEMOCRACY IN ACTION

The acquittal recently of two national paint manufacturers on charges of violating the Sherman anti-trust laws is an incident of more than passing interest.

Litigation was started in July, 1948, when the U. S. Justice Department obtained indictments against thirteen paint companies and twenty-one of their officials, charging them with conspiracy to fix paint prices, discounts, and allowances.

Twelve of the firms and twenty of the individuals pleaded "nolo contendere" and were fined \$5,000 each, and the individuals paid fines ranging from \$1,000 to \$3,500.

E. I. du Pont de Nemours and the Glidden Company fought the indictment and the fifty-day trial in which the jury returned their verdict of acquittal, after six hours of deliberation, resulted.

Dwight P. Joyce, Glidden president, points out "we could have pleaded nolo contendere and paid a fine of \$5,000 just to avoid the problems and expense of a court trial, but our belief in justice prompted us to make the fight." It is estimated that attorney fees, together with other costs exceeded \$100,000, however, Joyce declared "It is well worth the \$95,000 to take the stigma off the company name."

It should be reassuring to many to learn there remain top executives in industry who feel rights as individuals, or firms, are worth defending, and that a conflict between government and private interest does not necessarily mean any actual violation of the law.

The two firms acquitted in this instance are to be commended for exercising their prerogative to question a government charge of law violation, and it is also reassuring that a jury of unbiased citizens agreed with the defendants.

It is a worthy example of Democracy in Action.

FHA insured mortgages total over \$200-million have been authorized at Wherry Act projects near military installations scattered throughout twenty-five states and providing homes for more than 25,000 families of military personnel.

* * *

GI LOANS LIMITED TO USA

A question was recently submitted to the Veterans Administration office in Los Angeles, California, by a veteran who said he was planning to take a job in a foreign country and wanted to know:

"May I use my GI loan benefit as a help toward buying a house for myself and my family to

live in on the other side of the ocean?"

The VA replied: "No, that cannot be done. Under the law, GI loans may only be used to buy homes in the United States, or its territories and possessions.

In all probability the VA representative having the temerity to quote the "law" will be charged with being an isolationist.

New housing during 1951 consumed an estimated 2,091,000 tons of steel as compared with non-residential construction of 13,000,000 tons.

MARK DANIELS, A.I.A.

Private funeral services were held in San Francisco, January 17, 1952, for Mark Daniels, 70, former Assistant Secretary of the Interior, California architect and Landscape Engineer, and Associate Editor of Architect and Engineer magazine, who died January 14, 1952 in a San Francisco hospital following a long illness.

A graduate of the University of California, Mr. Daniels first gained attention as the designer of many of the roads and vistas in Yosemite National Park. Later he was Assistant Secretary of the Interior under President Wilson.

He designed the Pebble Beach golf course, on the Monterey Peninsula, the Santa Cruz Municipal Auditorium, Mt. St. Mary's College, Los Angeles, and the estates of the late John McCormack and Douglas Fairbanks.

As State landscape architect of California he designed many of the grounds on Treasure Island for the Golden Gate International Exposition. His most recent work was as senior architect on the original plans for the Ping Yuen housing project in Chinatown.

Mr. Daniels was a member of the Bohemian Club and the Family Club. He served with United States Engineers in World War I.

He is survived by his widow, Ruth, of 115 Buckingham Way; a sister, Mrs. Zua Leo, and a stepson, Henry Anderson.

JOINT INFORMATION COMMITTEE

AMERICAN INSTITUTE OF ARCHITECTS and THE PRODUCERS COUNCIL, INC.

Further information has been received from the subsequent meeting of the JOINT INFORMATION COMMITTEE of the American Institute of Architects and the Producers' Council which was held January 14, 1952 at the American Standards Association in New York. Again we have been allowed to review the minutes of this meeting and are reporting as much as this space will allow of the procedures and decisions. The report of the Committee appointed November 15, 1951 to study the Card File or Loose-Leaf Specification Service was given by Mr. Charles M. Mortensen, Producers' Council, who stated that two meetings had been held in Washington at which details of the program had been discussed and a tentative budget formulated.

Representing the Construction Specifications Institute Mr. Carl J. Ebert, President C.S.I. and Mr. Harold R. Sleeper, F.A.I.A., C.S.I., expressed their personal interest, and the interest of that organization in the proposed specification service and a desire to cooperate in every possible way to insure its accomplishment. They pointed out the need for and value of such a service and the unusual specification writing talent available in the membership of THE CONSTRUCTION SPECIFICATIONS INSTITUTE.

Mr. Sleeper agreed with Co-Chairman Lessing W. Williams', A.I.A., suggestion, that specification committees should contain representatives from various sections of the country. It was suggested that on the basis of carefully prepared material, which would indicate the character and scope of the proposed service, it should be possible to obtain advance orders and commitments from industry and individual architects.

The following quotes are abstracted from the report prepared by Mr. Walter Taylor, Director of Education and Research, A.I.A., presented to the meeting as—OUTLINE OF PROPOSED SPECIFICATION SERVICE. "TITLE—Construction Specification Service—A.I.A.-C.S.I. Auspices—Sponsored by The American Institute of Architects and The Construction Specifications Institute, with collaboration of The Producers Council, and published on service subscription basis by The A.I.A.

"Purposes—To provide to architects and other design professions, convenient, reliable, up-to-date data to be used in the preparation of specifications.

While valuable and useful to all architects and engineers, it will be specially useful in the numerically preponderant smaller offices and to younger practitioners of limited experience in specification writing, and to offices located in areas where technical assistance by consultants and industry specialists is not conveniently available.

"What it is not—It is not a method or system or theory of specifications. It is not a hand book on how to write specifications, but indicates what to write. It is not product literature of advertising. It is not intended to relieve the architect of the responsibility of deciding what materials, equipment and methods he will use, but will aid him in specifying whatever he has selected for the particular job. It is not throw-away work sheets.

"Description—The service will consist essentially of a file of cards (or loose leaf pages) containing concise and carefully edited specification paragraphs, with alternatives for optional types of material and method, of two general types: (1) Basic Construction Specifications (on white cards) for optimum good quality construction in terms of standard materials generally available. Wherever possible, nationally approved specifications originating with technical societies and trade associations will be used, edited for simplicity and impartiality with reference to proprietary products. (2) Special Specification material (on colored cards) provided by trade associations (one color) or individual manufacturers (another color) to cover special types of products or special construction methods for the same, or particular qualities differentiating the product or its use from the average or standard of the same general type, not covered by the basic specification.

"The Producers' Council will assist in original and continuous promotion and securing advance fees for participation, in establishing contacts with technical personnel of trade associations and companies."

Following the general discussion of this report the following action was unanimously taken: RESOLVED: That the Progress Report of the Special Committee be accepted, with thanks, and the Committee be requested to give further study and consideration to the project, for the purpose of preparing material to show the general character and scope of the proposed service.

NOTE: This news space is being contributed by ARCHITECT & ENGINEER Magazine to the JOINT INFORMATION COMMITTEE representing the Northern California Chapter of The American Institute of Architects and the Northern California Chapter of the Producer's Council, Inc., and is available to this Committee for the purpose of bringing to the attention of leaders within the Construction Industry various phases of the Architectural profession and building materials industry procedures for general consideration and comment. Your "ideas" and any suggestions for the better pooling of thoughts along these lines should be sent to "Joint Information Committee, c/o The Architect & Engineer, 68 Post Street, San Francisco," where they will be immediately forwarded to proper committee members.

NEWS and COMMENT ON ART

CALIFORNIA PALACE OF THE LEGION OF HONOR

The California Palace of the Legion of Honor, Lincoln Park, San Francisco, is observing the 5th Annual Exhibition of Contemporary American Painting during February and, according to Thomas Carr Howe, Jr., director of the museum, the exhibition represents one of the finest events offered to the public.

PORTLAND ART MUSEUM

Thomas C. Colt, Jr., director of the Portland Art Museum, West Park and Madison, announces a number of special events for the museum during the early part of the new year.

"Two major developments in Museum and School policy have been given long study, with the result that we are able to announce new directions with the new year," reports Colt. The Museum's Art Policy will observe greater attention to exhibitions and accessions, to historic art which gives richness and background to western culture, and to European heritage in the arts from the Middle Ages onward.

Other augmented programs will include School Alumni Activities in which students will reactivate their interests with the Museum.

Four paintings were given to the Museum recently by Jan de Graaff. They are: *Composition With Stripes*, a fresco relief by George L. K. Mor-

ris; *Fish*, tempera on gesso by Charles Heaney; *Harlem Street*, gouache by Jacob Lawrence, and a gouache (untitled) by Alexander Clader. All were painted in the 1940's. Additional print purchases from the Oregon Print Annual, authorized by the Board of Trustees at the December meeting are: *Self Portrait and Dark Lake*, lithographs by William Givler; *We Have A Balloon*, lithograph by Demetrios G. Jameson; *Woman With Fur*, woodcut by Jane W. Haseltine; *Deposition*, lithograph by James Phillips; *Neighbor*, woodcut by Manuel Izquierdo; and *Bird*, monoprint by Amanda Snyder. Seven West Coast Indian baskets were given the Museum by Miss Alice Kendall.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is presenting a number of outstanding events and exhibits for the month of February.

Among the special Exhibits are: *Drawings and Watercolors* by Hannah Weber-Sachs, Theodore Brenson, and Margo Hoff; *Twentieth Century Master Movements (Cubism, Futurism)* — Museum of Modern Art Exhibition; *Vincent Van Gogh, Artist — AFA Exhibition*; *Matthew Barnes Memorial Exhibition*; *Eleven Dutch Print Makers — AFA Exhibition*; *Block Paintings* by Charles Smith; *Rental Gallery exhibitions*; *Carvers, Modelers, and Welders — Museum of Modern Art Exhibition*; *71st Annual Exhibition of Painting and Sculpture of the*

NEWS AND COMMENT ON ART . . .

San Francisco Art Association and "Showbox" an exhibit of the work of children from the Arizona Indian Reservations.

Concerts on February 18th and 28th will feature the "California String Quartet," and the Weiner-Shorr Sonata Recital, respectively.

A group of lectures will include the Mathews Barnes Memorial Exhibition by Anneliese Hoyer, February 3; Permanent and Loan Collections by Clifford Peterson, February 10; Cubism, Futurism by Anneliese Hoyer, February 17; and the 71st Annual Oil and Sculpture Exhibition by Barbara Fitzwilliams on February 24. The Monday evening series on "Art of Today" will include Expressionism in Germany, Surrealism, Abstract Art, and Modern Sculpture.

Gallery tours will be conducted each Sunday at 2:15 p.m.

Special art classes include the Sketch Club on Friday evenings; a Painting Class on Friday evenings; and Children's Classes each Saturday morning at 10 a.m.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, has scheduled a number of special exhibitions and events for the month of February, in addition to the regular exhibit of permanent collections.

In the Museum's educational program courses in the study of Art and Ideas are being held and a new series "Painting For Pleasure" will start in April. These classes together with the "Workshop" are designed to develop observation and appreciation in Art for adults.

The Children's activities include Drawing and Painting for youngsters 4 to 10 years old each Saturday morning 10:15 to 11:30. A class in Picture Making, for students 10 to 15 years old is held each Friday 3:30 to 5:00 p.m., consists of drawing of works in the museum galleries for the practice of observation.

UNIVERSITY OF FLORIDA WINTER EXHIBITION

A diversified group of special exhibitions for the Winter-1952 have been announced by the University of Florida, Gainesville, Florida, and will be held in the Foyer of Building "E".

Included in the exhibits are: Experimental Photography from the Museum of Modern Art, New York; Student Work of the Department of Art, University of Florida; a prize winning Design of Gar-

den Type Apartments; the American Institute of Architects National Honor Awards—1951, through courtesy of the American Federation of Art, Washington, D. C.; Architectural Designs and Sketches by Rudolf Frankel; Paintings by the Director, Harry Hershey, Art School of the Ozarks, Eureka Springs, Arkansas; Student Work by the Department of Architecture, University of Florida; Contemporary Arts, Paintings from Contemporary Arts, Inc., New York; and Twenty American Paintings, from International Business Machines Collections.

SAN FRANCISCO ART ASSOCIATION

Among the Board of Directors selected at the recent election, were Robert Bach and Richard O'Hanlon, Artist representatives; Ellen Bransten, William W. Crocker, Hector Escobosa, Mrs. Walter A. Hass, and Mrs. Turner McBaine, Lay representatives. Each will serve for a term of three years.

Frederick P. Vickery, formerly director of the E. B. Crocker Art Gallery, Sacramento, has been appointed director of the Montalvo Foundation.

Dates for the 16th Drawing and Print Award have been set for May 9 to June 3.

CITY OF PARIS

The Rotunda Art Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan will offer a number of paintings by Caroline Martin and Hamilton Wolf during February. Also exhibited will be Sculpture by Elah Hale Hays.

The Pictures of the Month will feature French Paintings recently arrived including "Flowers" by Brandel, "Plage Honfleur" by Gran Sala, "Moulin de la Galette" by Gall, and a number of others.

PACIFIC ARTS ASSOCIATION TO CONVENE IN LOS ANGELES

The Pacific Arts Association has announced it will hold a three day convention at the University of California at Los Angeles, starting on April 5.

The organization represents a large membership among the professional artists, craftsmen, and art educators representing the eleven western states and is the western regional division of the National Art Education Association, a non-profit organization designed to promote art and art education.

It is the 27th Annual Convention of the Pacific Arts Association and advance registrations indicate a record membership will attend the three day conferences.

SCHOOL PLANNING

STUDY REPORT RECOMMENDS MORE CONSIDERATION OF SPACE AND EQUIPMENT

Elementary schools now being planned should include more space and educational equipment to help children develop better socially and emotionally, as well as mentally, it is recommended in a report just released by the Committee on School Buildings of the Metropolitan School Study Council, a research affiliate of Teachers College, Columbia University. The committee declares that the structural features it advocates for the modern elementary school "are in harmony with the emerging design of education."

The committee, composed of teachers and administrators in seventy-one school systems in the metropolitan New York City area, prepared the report, "Designing the Elementary School," for boards of education, school executives and interested citizens who will be planning this type of school in the near future.

Larger classrooms, providing forty to fifty square feet of space per pupil—twenty-four square feet is the average allotment at present—specially equipped rooms for the arts and sciences, conferences rooms for school administrators, health and guidance officials, and multi-purpose gymnasiums and auditoriums, the committee declares, should be the principal features of the new elementary school.

To permit children to learn by experience and from first-hand observation, larger play and work areas, in and out of the classroom, are needed. Certain lessons in biology, for example, can be illustrated by garden or plant-care projects in the room. Increased use of audio-visual materials, the committee asserts, will require more storage space and such additional features as a music room, where several classes or groups can use the equipment at one time.

"Each school building must be tailored to serve the specific needs of its school community," the report points out. "To provide for a growing, living program, school buildings must be planned for greater flexibility. Parking facilities, wide and safe driveways, multi-purpose rooms that can be used for adult-education classes or community meetings, should be included in planning a school that will be sensitive to community needs as well as to the growth of children."

Not a technical blueprint for professional builders or architects, the report is addressed to "school

planners who are looking for types of physical facilities suggested by current trends in educational practice." Many of the committee members played important roles in school-building programs in their own communities.

The report observes that roomier classrooms will be needed in future schools to provide adequate space, first, for modern teaching materials—such as pianos, workbenches, science equipment, art easels—and second, for play areas and group work.

"Children in the lower grades are basically active, need space to move around and to experiment with many types of materials," it is noted. Classrooms for older girls and boys should be as large as those for younger children. Although they may not be using play corners, they will need space for group conferences, dramatizations, for making maps and models, and for other selected activities that help them learn by experience."

Traditional blackboards, covering one or more sides of the room, should be replaced by chalkboards in colors that prevent glare and eyestrain. By using one or two sections of a board, the remaining wall space can be used for bulletin boards for displays or announcements.

Slant-top desks with screwed-down chairs are bad psychologically and from the standpoint of learning, the report maintains. Separate desk with flat tops and detached chairs provide for greater usefulness and flexibility, and "light colors, dull finishes, and steel legs are desirable for easy maintenance, strength and lighting."

Educational trends may radically change the shape of the classroom. Architects should design the school room to facilitate teacher supervision and to make possible the best kind of lighting. A room may take a hexagonal form if it will mean better education for the pupils in it, the report advises.

A unit of special rooms, fitted with shop, science and art equipment, is recommended by the committee for laboratory study in these fields. The shop, with machinery and tools for clay, wood or metal work, can be used as a workshop where children can use materials and solve problems too complicated for classroom work. It can also be used for adult crafts classes at night.

ULTRA MODERN AUSTRALIAN APARTMENT BUILDING

MELBOURNE, AUSTRALIA
FREDERICK ROMBERG, Architect

By JOHN LOUGHLIN

Australian architectural circles have been excited by the completion of Melbourne's newest apartment block—a distinctive nine-storied ultra-modern building with the smooth flowing lines of a luxury ocean liner.

Appearance of any large new apartment block is a sufficiently rare event in Australia under present conditions to attract attention.

"Stanhill", built to the design of Frederick Romberg, Melbourne architect, with many advanced

features in apartment block design, strikes a refreshingly new note.

To the local eye the approach is unusual, even mildly startling. It is as different from sombre conventional apartment blocks familiar to Australians as, say, Debussy is from the Poet and Peasant Overture.

The difference comes not from any eccentricities of style, but from the fact that there are so few examples of contemporary design in apartment

. . . AUSTRALIAN APARTMENT HOUSE

building construction in Australian cities that "Stanhill" is the first many people have seen outside the glossier magazines.

This is due to the concentration of building resources on the bread-and-butter job of building houses as fast as possible to relieve the acute national housing shortage. Pressure on building materials and labor is severe. They are channelled to the private and Government large-scale home building schemes almost completely to the exclusion of apartment house construction.

There are critics who see a more effective approach to the accommodation problem in building more apartment houses and fewer single units—in building upwards instead of spreading outwards. But the average Australian prefers his own house and his own patch of garden to living in an

CURVES and right angles contrast pleasingly in design with balconies on the right providing access to each of the apartments.

BELOW: Apartment block is a glowing white composition of flowing lines and contrasting angles of reinforced concrete and glass.

ABOVE—The larger apartments combine professional rooms and private accommodations. This large room with fluted columns and wide expanse of glass wall is furnished as a board room with expanding view.

BELOW—Novel setting in a "studio" of a "Stonhill" apartment. It has a parquet floor, wrought iron furnishings, full walls of glass on the south and west sides, and a cocktail cabinet on the right.

. . . AUSTRALIAN APARTMENT HOUSE

apartment—or so the authorities in charge of housing schemes believe.

This is especially true in Melbourne, where there has been practically no big apartment house construction since the war. It is discouraged to some extent by building regulations which, among other things, fix height limits varying with different localities. Examples of contemporary Continental and Scandinavian apartment building architecture are to be seen only rarely.

"Stanhill" is a milestone in Australian architecture. It is a gleaming white composition in reinforced concrete and glass of graceful sweeping lines and contrasting stark cubist wings. It is a block of 31 suites, with administrative offices, and on the ground level, a dining room, beauty salon, garages, and shopping center.

The owners gave the architect a free hand, specifying only an ultra-modern design with the greatest possible natural lighting.

BELOW—Living room of a standard apartment showing dinette. Color schemes in the various apartments use contrasting pastel shades for walls and ceilings.

ABOVE—Typical plan of a standard apartment. Entire walls of glass for the two bedrooms and living room provide attractive views over park and Port Phillip Bay.

AUSTRALIAN APARTMENT HOUSE . . .

Purely local conditions dictated some aspects of the design. The dominant feature is a series of open concrete balconies sweeping along the northern exterior at eight floor levels, and giving access to the apartments. Romberg was able to make an architectural virtue from an irksome building regulation prescribing two fire exits for each apartment. There is a central elevator exit and a spiral stairway at each end of the balcony.

It is the flowing lines of the balcony parapets with the two upper floors stepped back, that give the distinctive illusion of ocean liner decks and superstructure. Monotony of flowing lines is broken up by the wholly pleasing contrast with the sheer surfaces of a rectangular central block, and the angular treatment of penthouse apartments.

On the south aspect an almost entire glass surface rises sheer from the ground, with no ornamentation on the white concrete framework except the small, private, railed balcony to each apartment. The suites extend right across the main wing to gain both north and south light.

(See page 38)

Flowing lines of building is heightened by stairway from an upper deck, giving illusion of a luxury liner ladder to captain's bridge.

BELOW—Some of the apartments have private roof gardens where tenants can sun-bake and enjoy the outdoors.

BURNED CLAY HOLLOW TILE IN MODERN CONSTRUCTION

By J. B. CRAWFORD, Vice-President
Kraflite Company, Niles, California

Walls of hollow tile, in various shapes and colors, have been doing a "strip tease" for modern construction during the past decade. Gradually shedding their traditional finish dressings of plaster, paint, or canvas, hollow tile walls are being presented "au naturel" in more and more modern structures. The increasing appreciation of the decorative as well as the functional qualities of burned clay tile make it acceptable today as the complete wall material for many applications, eliminating the time and expense of applying finishes of various sorts.

Progress in Clay Tile Manufacture

What is basically different about burned clay tile today? Principally refinements in manufacture.

Vacuum treatment of the plastic clays in the forming process prior to firing helps produce a dense, void-free product. This, coupled with better firing control, results in a stronger tile and greater uniformity in production. Of particular interest to the architect is the change to more appealing

and more practical unit dimensions. However, most important architecturally is the development of ceramic glazed surfaces to make a refined finish on what was formerly only a structural wall material. As a result of these refinements, the traditional burned clay tile—structural core of many a partition or curtain wall—now sheds its shroud of plaster and paint to emerge in its own attractive array of colors and textures.

Combination of Structural and Decorative Qualities Vastly Extends Usage of Clay Tile

Structurally, glazed and unglazed hollow tile are used today in the same manner and for the same purpose. Among the functional applications are:

1. Fireproofing of structural steel.
2. Partitions and interior walls.
3. Furring or moisture-proofing of concrete and masonry walls.

CENTRAL VALLEY CHAPTER ELECTS NEW OFFICERS

John W. Bomberger, A.I.A., Architect of Modesto, was elected president of the Central Valley Chapter of The American Institute of Architects at the annual meeting of the organization, recently held in Sacramento.

Other officers chosen to serve during the ensuing

year included Nicholas Tomich, A.I.A., Sacramento, Vice-President; Albert B. Thomas, A.I.A., Sacramento, Secretary; Ted de Wolf, A.I.A., Stockton, Treasurer; and Gordon Stafford, A.I.A., Sacramento, Director.

Silvio Barovetto, A.I.A., of Sacramento, was named as the Alternate Representative of the Central Valley Chapter to the California Council of Architects, the state-wide organization representing various A.I.A. Chapters throughout California.

CALIFORNIA COUNCIL OF ARCHITECTS

Architects were given an opportunity to tell their story to "law makers" recently when representatives of the California Council of Architects, representing various Chapters throughout the state, appeared before members of the State Assembly Interim Committee who are making a study of governmental efficiency and economy.

It was pointed out that great waste of public funds resulted from overlapping and conflict of building jurisdictions and regulations and it was suggested that the state legislators enact remedial legislation to correct this annual waste of construction funds.

WASHINGTON STATE CHAPTER

Regional Director Irving G. Smith, on his way to an A.I.A. Board of Directors meeting in Washington, D. C., participated in the February meeting which was devoted to a consideration of "Architecture—Business or Art," "Tacoma—Is It Architecture," and "What About the A.I.A.?"

In addition to highly informed speakers discussing the above subjects, a motion picture entitled "The City," representing a fine documentary film on city planning, was shown.

The University of Washington School of Architecture "Atelier" Annual Architects' Costume Ball, held February 15, was devoted to the theme of "Forbidden Fantasy."

Bowling activities center around Bouillon-Griffith No. 1, and Harmon, Pray, Detrich teams with a number of others in close competition for top honors.

CHARLES E. FRY ELECTED PRESIDENT SC ARCHITECTS

Charles E. Fry, A.I.A., member of the architectural firm of Austin, Field and Fry, Los Angeles, has been elected president of the Southern California Chapter of The American Institute of Architects, succeeding John J. Landon.

CHARLES E. FRY
President SCC-AIA

A resident of San Gabriel, Fry is a native Californian. He graduated from Manual Arts High School and the University of Southern California, School of Architecture. He served as a Lieutenant Colonel in the USAF Reserve and at present is commanding officer of the 9354 Volunteer Air Training Unit.

Other officers elected for the ensuing year include Henry L. Wright, firm of Kistner, Curtis & Wright, vice-president; C. Day Woodford, Glendale, secretary; Robert Thomas, firm of McFarland, Bonsall & Thomas of Victorville, treasurer; and S. Kenneth Johnson, Manhattan Beach; Kemper Nomland, Pasadena; William B. Balch, La Canada; and John J. Landon, North Hollywood, Directors.

SOUTHERN CALIFORNIA CHAPTER

Dr. Neil H. Jacoby, Dean of the School of Business Administration at the University of California at Los Angeles, was the principal speaker at the February meeting. His subject was "Economics of the Construction Industry in Southern California," and his background of participation in the University of Chicago's Round Table Broadcasts,

STRUCTURAL ENGINEERS ASSOCIATION OF SOUTHERN CALIFORNIA

John C. W. Carroll, president of the Prestressed Concrete Corp. of Kansas City, and developer of the method currently used by his company for prestressed concrete construction, was the chief speaker at the February meeting, held in the Alexandria Hotel, Los Angeles.

Carroll emphasized the important subject of specifications for wire for prestressing and included an explanation and demonstration of basic design procedure of prestressed concrete. He also described recent developments in anchorage systems. A number of illustrated slides were shown.

A special meeting was held recently with engineers and representatives of the Los Angeles Board of Education to discuss the grading of 2 x 4's and 2 x 6's, together with other grades and sizes of lumber. The meeting was sponsored by the West Coast Lumbermen's Association.

Among new members recently joining the Association are John A. Majdick, John C. Kariotis, and William D. McEwen, Junior; and Murray Merrin, Harry Bieber, and Robert G. Beer, Associate.

EAST BAY STRUCTURAL ENGINEERS SOCIETY

Appointment of committees and chairmen to spearhead 1952 activities of the East Bay Structural Engineers Society was announced by Ned Clyde, newly inducted president of the Society, following a meeting in Oakland.

Appointments include Berg Huntington, Program; Richard Clark, Membership; Marcus Carlson, Codes; George Taylor, Public Relations; Eric Peterson, Planning of Deferred Projects; and J. Blain Tulloch, Tilt-up Construction.

The executive committee is composed of President Clyde; Berg Huntington, vice president; McGregor Graham, secretary-treasurer; and Robert Dalton.

AMERICAN MILITARY ENGINEERS SAN FRANCISCO POST

The February meeting was devoted to a discussion of engineering problems including the "Career Counseling of Future Engineers," with Dr. Cleo Brunetti, Associate Director, Stanford Research discussing the phase "America Must Have More Engineers."

Dean L. M. K. Boelter, Dean of Engineering, University of California at Los Angeles, spoke on "Technical Manpower—How The Universities Can Meet The Problem"; Dr. Vaughn Sidell, Superintendent, Alameda Public Schools spoke on "Public School's Part in the Preparation for Future Engi-

ciation were Vincent A. Arena and Quong P. Chin,
Members; and Cecil H. Wells, Jr., Junior Member.

**AMERICAN SOCIETY FOR METALS
PUGET SOUND CHAPTER**

Reported by L. F. Franz,
Boeing Airplane Company

The Puget Sound Chapter of the American So-
ciety for Metals presented its first session of the
Annual Educational Lectures on January 16. The
lectures were presented in the form of an open
panel discussion on "Surface Treatments and Fin-
ishes for Metals," with Professor Blake Mills, Uni-
versity of Washington, as Moderator.

The first speaker, Professor Gilbert S. Schaller
of the University of Washington, spoke on "Ma-
chining and Surface Heat Treatment of Carbon and
Alloy Steels." Professor Schaller gave several de-
finitions of terms referring to metal finishes and
qualities of surfaces and discussed a number of
the methods used to obtain the type of finish de-
sired.

The second speaker, Mr. M. L. Schuehle of Boe-
ing Airplane Company, discussed "Chemical and
Mechanical Cleaning and Coating of Carbon and
Alloy Steels." Mr. Schuehle discussed several of
the methods used in cleaning metals and a num-

ber of the solutions, materials, or conditions used
in chemical, electro-, mechanical, and molten salt
bath cleaning methods. He also presented purposes
for coatings while discussing the various types of
coatings, both temporary and permanent. Mr.
Schuehle also explained the vacuum sputter
method of applying surface coatings by vaporizing
certain metals or alloys so they will permeate and
cover the surface of the part to be finished.

John E. Fowler of Eagle Metals Company dis-
cussed "Surface Treatments and Finishes for Stain-
less Steels." Mr. Fowler explained several of the
methods of handling the surfaces of the stainless
steels. He outlined various factors involved in ma-

CLASSROOM LIGHTING

This was the subject considered by The Producer's Council Panel No. 4 at the last regular meeting on January 21st at the Palace Hotel in San Francisco.

The panel, enjoyed by a capacity audience of 127, was given in two phases. Phase 1, "The kind of light which is needed in classrooms", was sponsored by the American Structural Products Company and very aptly presented by Mr. Al Baker. The second phase, "Supplementary lighting for the co-ordinated classroom", was equally well presented by Mr. Bob Horner and sponsored by the F. W. Wakefield Brass Company.

It was pointed out that due to present day school activities, it is becoming mandatory that thought be given to the classroom as a whole when considering classroom lighting, both natural and artificial.

The Illuminating Engineering Society for American Standard Practice for School Lighting has recommended certain minimums of lighting brightness and minimums of high brightness contrasts which is the elimination of glare.

Briefly the recommendations for limits of brightness ratios in the schoolroom are as follows.

a) Between the "central visual field" (the seeing task) and immediately adjacent surfaces, such as between task and desk top, with the task and brighter surface—1 to $\frac{1}{3}$.

b) Between the "central visual field" (task) and the more remote darker surfaces in the "surrounding visual field", such as between task and floor—1 to 1/10.

c) Between the "central visual field" (task) and the more remote brighter surfaces in the "surround-

ing visual field", such as between task and ceiling—1 to 10.

d) Between luminaries or windows and surfaces adjacent to them in the visual fields—20 to 1.

Mr. Baker showed how the use of light directing glass blocks installed over ribbon windows afforded good light control from the two basic light sources, the sun and the sky. He also stated that he could not overemphasize the fact that greater attention should be given to sky brightness, regardless of exposure. Ground reflection and shading or reflection from adjacent buildings also must be considered.

In phase 2, Mr. Horner stated that "our problem today is to co-ordinate artificial lighting with modern daylight control and to facilitate three dimensional seeing, and to provide soft modeling shadows to define clearly contours, location, relationship and size."

This can be accomplished by means of luminous indirect equipment using either incandescent or fluorescent lamps. The density of the plastic reflectors on this equipment is controlled to eliminate glare and the illuminated ceiling becomes the principal light source, while the luminous suspended fixture and the properly controlled side walls become the secondary source. We were shown another method of providing a low brightness source for classroom lighting by providing a translucent ceiling through which the light source comes from above.

In closing, Mr. Horner stated that "artificial light should be considered as supplementary in most classrooms" and "should produce no glare either from direct viewing or from the lighted surface".

The meeting was concluded by a brief question and answer period moderated by Mr. Andy Hass, AIA.

chining, chemical, and heat treating methods of obtaining the desired surface and their effects on corrosion resistance.

A question period followed the discussions.

ILLUMINATING ENGINEERING SOCIETY TO HOLD SAN FRANCISCO CONFERENCE

Industrial and office lighting, with emphasis on increasing the efficiency of defense production, will be featured on the two-day technical conference program of the Illuminating Engineering Society to be held in San Francisco March 13-14. Delegates to the Conference are expected from California, Nevada, Utah, Arizona and Hawaii, with the Northern California Section serving as hosts.

Among the speakers will be Samuel G. Hibben, Director of Applied Lighting of the Westinghouse Electric Corp.'s lamp division at Bloomfield, New Jersey, national president of the Society, who will address the opening session.

Charles R. Long, Los Angeles, Pacific Coast district engineer for Westinghouse lamp division, will review recent developments in filament lamps for industrial use, and F. J. Bailey, Los Angeles, assistant district engineer of the General Electric lamp division, will speak on "Recent Developments in Gaseous Discharge Light Sources."

William P. Lowell of New York, chief commercial engineer of Sylvania Electric Company, will report on the development of luminous glass panels; E. E. Coleman, district engineer, General Electric, Los Angeles, will discuss fluorescent lamp performance; and Harold Gerber, San Francisco consulting engineer, will speak on "Copper Savings Through Improved Industrial Wiring Systems."

A dramatic road show presentation, "Salute to Lighting Progress," from General Electric Company's "University of Light" laboratories at Nela Park, Cleveland, Ohio, will be given Thursday evening by Alston Rogers, Nela Park.

Other speakers will include B. F. Jones, San Francisco, "Glare and Its Control"; H. Wollman, Capital Company, Oakland, "Use of the Integrated Ceiling, With Lighting, and Its Advantages in New Construction"; and George J. Taylor of New York, eastern sales manager of Day-Brite Lighting, Inc., on "Comfort of Seeing in Office Lighting."

A discussion of color in lighting; a report on the lighting of California's new Capitol Annex in Sacramento; and two papers by Willard C. Brown, manager of the engineering department at General Electric's Nela Park lamp laboratories; and a discussion of "Black Light in Industry" by Marcel Vogel of San Francisco will complete the program.

Use PORCELAIN ENAMEL PANELS for CURTAIN WALLS in ESSENTIAL CONSTRUCTION

PORCELAIN ENAMEL assures unexcelled economy in curtain wall construction. Panels arrive in numbered sequence for rapid installation. They're light in weight, easy to handle. Walls gain the strength of steel—no need for reinforcement or heavy structural members. And once installed, curtain walls of **PORCELAIN ENAMEL** retain original color and vitreous luster...completely fadeproof, fire safe. Unlimited selection of colors, textures and dimensions—all executed to your most rigid specifications. To combine surprising economy and rugged permanence with simple maintenance, always specify and use **PORCELAIN ENAMEL** panels in essential curtain wall construction. For details, write...

H. H. Robertson, Pacific Gas and Electric Company, San Francisco, is the conference chairman, and in charge of the program is S. H. Hazleton, northern California district engineer for the General Electric Company. Presiding at various sessions will be the chairman of the southern California Section, Arizona and Utah Chapters of the Society.

FEMINEERS

Brigadier General Dwight F. Johns, Acting Chief, Division of Engineering Service, Office of Civilian Defense, State of California, was the principal speaker at the February meeting held in the Elks Club in San Francisco.

Mrs. C. B. Hopkins served as hostess of the day, with reservations in charge of Mrs. Art Smith, Jr.

A.I.A. ACTIVITIES

ties of the Producers' Council, and the meeting represented a joint meeting of architects and Producers' Council members.

Consideration was given to the selection of Delegates to the annual convention of the A.I.A. which is to be held in New York City June 24-27.

EAST BAY CHAPTER ELECTS TREICHEL

Chester H. Treichel, A.I.A., Architect of Oakland, was chosen to serve as president of the East Bay Chapter of The American Institute of Architects for the year 1952, at the annual meeting of the Chapter recently held in Oakland.

Other officers elected to serve with President Treichel included Malcolm Reynolds, A.I.A., vice-president; Jack Lloyd, A.I.A., secretary; and Roger Lee, A.I.A., treasurer.

Membership in the Chapter comprises architects in East Bay counties of the San Francisco-Oakland Metropolitan area.

CENTRAL WASHINGTON ARCHITECTURAL SOCIETY

Gene Renard, landscape architect employed by the city of Yakima, spoke at a recent meeting of the Central Washington Architectural Society in Yakima, on the subject "Landscape Architecture."

Renard, a graduate of the Iowa State College, included city planning in his talk and stressed the value of a well rounded program including the architect, landscape architect and city planner.

SAN DIEGO CHAPTER

A number of architectural matters were taken up at the January meeting, including report of the nominating committee; outline of a series of meetings sponsored by W. P. Fuller Co., on "color harmonies"; and a report of the Treasurer and Exhibit Committee.

The exhibit committee suggested a number of unifications in the design and presentation of exhibits which should greatly increase the attractiveness of future architectural exhibits prepared by Chapter members.

LONG BEACH ARCHITECTS

William Lockett, A.I.A., has been elected president of the Long Beach Association of Architects for the year 1952.

Other officers chosen to serve with Lockett include Edward Killingsworth, vice-president; Louis S. Miller, secretary; and Edgar Marrotte, Thomas Russell, Palmer Power and High Gibbs, directors.

Notes on Quality LIGHTING:

Here in the West the installation assuring maximum lighting efficiency with minimum service and maintenance is, by every standard of comparison, SMOOT-HOLMAN. The hallmark of quality in better buildings is the presence of SMOOT-HOLMAN equipment.

The New D-P Seal-Lux, pictured above, is a vapor-tight fluorescent luminaire built for high efficiency and rugged service life under the most exacting conditions.

BURNED CLAY HOLLOW TILE IN MODERN CONSTRUCTION

(From page 24)

4. Combined with brick for exterior load-bearing or curtain walls.
5. In combination with non-structural masonry veneer materials.

The qualifications of burned clay tile for such applications are eminent:

1. High resistance to sound transmission.
2. Good heat insulation.
3. Absolute resistance to vermin, rats, termites, moisture and rot.
4. Unaffected by age.
5. Perfect bond for cement or plaster finishes.

With the development of today's glazed finishes, hollow tile gains important new qualifications to extend its applications. It offers an impervious finish that is sanitary, easily cleaned, virtually mar and scuff-proof, resistant to most acids and alkalis, and as ageless as the tile itself. The fired-on finish is available in clear and colored glazes, providing interesting textural effects, or in a com-

Partition Tile: With smooth natural brick red finish and wall tile wainscot (right).

plete array of colors to match any decorative scheme. The glazed structural wall unit thus provides both the structural wall and a superior finish, in a single material.

Types of glazed wall unit installations tend to follow the logical application of the principle features. The sanitary glazed surface, easily cleaned

and unaffected by steam, moisture or repeated scrubbing, make the glazed wall unit especially popular with food plant operators. Today, scores of dairies, canneries, meat packing plants, bakeries, breweries, bottling works and similar food processing plants utilize glazed wall units . . . typical installations are shown in the accompanying photographs.

LOADBEARING TILE

Thicknesses 4", 6"
and 8".

The durability of the glazed finish, its resistance to marring and scuffing, its low maintenance and cleaning costs appeal particularly to institutional and industrial building operators. Schools and other public buildings enjoy substantial maintenance economies where corridors, washrooms, stairwells and similar "heavy traffic" areas are walled with glazed structural units. The long-range economy of the glazed structural wall is finding increasing acceptance in general industry, particularly in rest rooms, cafeterias, laboratories, entries and corridors. In fact, these "walls that never need painting" offer multiple advantages to industry; not only do they reduce maintenance expense to a minimum, but also they provide clean, attractive surroundings to heighten worker morale and impress plant visitors.

Hundreds of young architects today doubtlessly realize the evolution of the traditional structural clay tile into today's combination structural-and-finish material, for it is their demand for a decorative structural material in contemporary design that helped bring it about!

BOOK REVIEWS PAMPHLETS AND CATALOGUES

HOW TO BUILD WALLS, WALKS, PATIO FLOORS. Lane Publishing Co., Menlo Park, California. Price \$1.50

"Walls, Walks, and Patio Floors," a Sunset Book, represents many answers to the challenge of those interested in outdoor living. Whether he has the work done or does it himself, the cost can be high for these items and satisfaction low if they are not properly planned.

The book is packed with literally hundreds of ideas and photographs. It tells in detail how to choose and use every imaginable material for walls, and patio floors, from concrete, stone, brick and adobe to tile, mosaic and redwood rounds.

ARCHITECTURAL AND ENGINEERING LAW. By Bernard Tomsen. Reinhold Publishing Corp., 330 W. 42nd Street, New York. Price \$7.00

This book cites 1300 cases that have come before the courts involving Architects and engineers in one way or another. It is designed to fill a long-felt need among members of the architectural, engineering, and law professions.

Contractors, sub-contractors, builders, suppliers and their individual and collective clients, as well as architectural and engineering, and law schools, will find this book extremely useful.

The author, Bernard Tomsen, has the ideal background to write such a book, having written for a number of years the feature "It's The Law" which appears in a national architectural publication, and practiced law in New York.

The book is divided into seven major parts, each dealing with a specific phase of the construction industry.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

346. VERMICULITE PLASTERING AND ACOUSTICAL LASTIC
New standard specifications for vermiculite plastering and acoustical plaster have been issued by Vermiculite Institute. The plastering specifications are in general agreement with American Standard Specifications for Gypsum Plastering, A.S.A. No. A42.1-1950. The booklet covers the application of vermiculite plaster base coats to all types of lath and masonry bases, solid partitions, and standard finish coats, including the new vermiculite trowel finish. Of general interest to architects and contractors is the fact that vermiculite acoustical plaster can be applied directly to monolithic concrete ceilings. In other words, no base coat is needed. Detailed suggestions for best results in plastering over masonry, solid partitions, and metal lath ceilings are given in the booklet. AIA S-A1, 12 pages, illus., 1/30/51.

347. HOME FINANCING CIRCULAR

For the average American family whose biggest lifetime investment is building or buying a home, the Small Homes Council at the University of Illinois offers practical advice in a revised and enlarged edition of its circular on "Financing the Home." "Home Financing is a mutual program as far as the homeowner and the lender are concerned," the circular emphasizes. "To avoid loss to either or both, the home must be financed on a sound basis." The new publication covers steps in financing a home, beginning with how much a family can afford to spend. Twenty to 30 per cent of the family budget goes into housing—either in rent or ownership, it points out. Interest, taxes, insurance, and upkeep all are a part of home costs and must be anticipated. Illustrating this, a table shows the annual outlay for each \$1,000 borrowed. This outlay varies according to interest rates and the number of years the loan runs. A1.3, 12 pages, illus., 1/52.

348. NEW PLYWOOD CATALOG

The new "Weldwood Catalog" has recently been published by United States Plywood Corporation, world's largest plywood company. The new booklet contains descriptions, photographs, specifications, and list prices of softwood and hardwood plywood, doors, plastics and the many specialties which comprise the Weldwood family of products. Form 1052, 43 pages illus., 1/52.

349. PHILIPPINE MAHOGANY FOR CHURCHES

A brochure has just been released showing the treatment of CHURCH interiors and altars with the use of Philippine Mahogany. Beautiful illustrations of paneling and pews are included as well as reproductions of recent altar installations using Philippine Mahogany. 14 pages illus., 1/51.

350. WHITEPRINTING BULLETIN

An informative new bulletin on low-cost, complete SPEE-DEE whiteprinting outfits used in plants, offices, and schools has just been issued by Peck & Harvey, manufacturers of whiteprint, blueprint, and photocopy equipment. This brochure illustrates and describes portable whiteprinting outfits that produce black, blue, maroon or sepia line positive prints by the moist-diazo (semi-dry) or the ammonia-fume (dry) method. This bulletin also gives helpful facts about the whiteprinting process and important suggestions about printing and developing for speed, economy, and utility. 127, 4 pages illus., 12/51.

351. ENGINEERING SERVICE

The engineering services offered by York Engineering & Construction Company are described in a folder just published. These services include the design of buildings, foundations, and equipment for industrial plants, as well as project coordination and control. 4 pages illus., 12/10/51.

352. INDUSTRIAL PIVOTED STEEL WINDOWS

Announcement has just been made by Nat L. Lehman, Vice-President of The Steelcraft Manufacturing Company, that Steelcraft's "Industrial Pivoted Steel Windows" catalog has just been completed, and is ready for distribution. It describes the features, types, sizes and specifications of the New Steelcraft Pivoted Steel Window. AIA 16E, 4 pages illus., 12/51.

353. CONTROLS FOR HEATING AND AIR CONDITIONING

A very complete and informative catalog of thermostats, motor-operated valves and accessories for heating, ventilating, and air conditioning applications is now available from the Barber-Colman Company. A handy reference for all architects, engineers, and contractors when selecting control equipment to meet most rigid specifications. A.I.A. 30 F, 46 pages illus., 10/51.

354. GAS SCRUBBER BULLETIN

Complete with a capacity curve sheet, cross section diagram and other technical data including typical installation pictures, Peabody's new bulletin is now available for distribution. 203-B, six pages illus., 11/51.

NEW INDUSTRIAL PLANT FOR PITTSBURG AREA

The Monsanto Chemical Company has announced construction will soon begin on a 250-ton sulphuric acid plant on a 86-acre site near Avon, California, which is in the Pittsburg industrial area.

The plant will utilize waste sludge and hydrogen sulphide piped from the adjacent Tide Water Associated Oil Company refinery and according to Irving C. Smith, general manager of Monsanto's western division, the new plant will be in operation by the end of 1952.

SCHOOL PLANNING

(From page 9)

"While the ideal of a self-contained classroom should be recognized in the elementary program, special space should be provided for pupil laboratory experiences—experiences that are impractical to carry out in the classroom," the report advises.

Aquariums, science exhibits and art displays in these rooms will encourage children's interest in these fields, and the rooms will serve as centers for equipment too expensive or impractical to be supplied for each classroom.

A number of smaller offices and conference rooms are needed for efficient administration, health and guidance programs, the report declares. Offices for these departments should be designed as one unit and planned to facilitate future changes.

"Since these suites need a great many relatively small rooms, and since a basic principle of school construction is to avoid inhibiting the program by freezing it with bricks and mortar, it would be wise to make none of the interior walls of these suites permanent or supporting walls," the report states.

Decoration of these rooms, particularly in the guidance department, should be informal, well lighted and show a minimum of clutter. Magazine and book racks, movable exhibits and comfortable

furniture should be installed in a joint reception room for these offices.

Both school and community needs must be kept in mind, the study urges, in planning auditoriums and gymnasiums. Adequate seating capacity, motion picture and amplifying equipment, and adjoining storage and dressing room are necessary in the future auditorium if it is to be used for both school and community programs.

Gymnasiums, too, should be designed for maximum use through space-saving devices, such as recessible bleachers and well-planned court markings. Folding doors for cutting the gym in two, for separate, simultaneous use are now being used in modern schools, the committee reports.

Libraries in the modern elementary school will become a center for audio-visual aids as well as for reading and research. Part of the audio-visual section may include a speech room equipped with full-length mirrors and recording facilities for speech-correction work.

The planning of custodial facilities, lunch rooms, recreation areas and rest rooms for teachers should receive attention as important areas in the overall effectiveness of the school's program, the report concludes.

AUSTRALIAN APARTMENT HOUSE

(From page 14)

Each floor has a laundry with washing machines, drying rooms, and electric rotary ironing machines. From oil-fuelled furnaces hot water heating is reticulated throughout the building by means of heating coils embedded in concrete floors and ceilings.

The suites are roomy and designed in some instances to combine office, studio, or professional rooms with living accommodation. About half have been leased to doctors. Three large suites on the upper floors are topped by penthouses and have their own private roof gardens for sun-bathing.

A standard suite in the building has an area of 1,325 square feet, two bedrooms, living room with an attached dinette, an all-electric kitchen, and bathroom with toilet and shower recess. A low dressing table in the bathrooms is a novel angle in some of the apartments.

The entire south walls of the three main rooms of each apartment are of plate glass, with venetian blinds and velvet curtains in a variety of shades. From all of these rooms there is a magnificent view of Melbourne's Albert Park, with its yachting lake, and of the shipping lanes of Port Phillip Bay. The lounge opens on to a small private balconette.

Color schemes make use of contrasting pastel

100 to 500 yards. 10.50
Over 500 yards. 10.30

* Delivered to site.

CONCRETE BLOCKS—

	Hay-dite	Be-salt
4 1/2x8 1/2-inches each	\$.17	\$.18
6 1/2x8 1/2-inches each	.22	.25
8 1/2x8 1/2-inches each	.26	.26
12 1/2x8 1/2-inches each	.34	.39
12 1/2x24-inches each	—	.60

Haydite Aggregates—

3/4-inch to 3/8-inch, per cu. yd. \$7.25
3/8-inch to 3/16-inch, per cu. yd. 7.25
No. 6 to 0-inch, per cu. yd. 7.25

DAMP-PROOFING and Waterproofing—

Two-coat work, \$9.00 per square.
Membrane waterproofing—4 layers of saturated felt, \$10.00 per square.
Hot coating work, \$5.00 per square.
Medusa Waterproofing, \$3.50 per lb. San Francisco Warehouse.

Tricoac concrete waterproofing, 60c a cubic yd. and up.

ELECTRIC WIRING—\$15 to \$20 per outlet for conduit work (including switches).

Knob and tube average \$6.00 per outlet.

ELEVATORS—

Prices vary according to capacity, speed and type. Consult elevator companies.
Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including excavation doors, about \$9,500.00.

EXCAVATION—

Sand, \$1.00 to clay or shale, \$1.50 per yard.
Trucks, \$30 to \$45 per day.
Above figures are an average without water. Steam shovel work in large quantities, less; hard material, such as rock, will run considerably more.

FIRE ESCAPES—

Ten-foot galvanized iron balcony, with stairs, \$250 installed on new buildings; \$300 on old buildings.

FLOORS—

Asphalt Tile, 1/8 in. gauge 18c to 35c per sq. ft.

Composition Floors, such as Magnesite, 40c-\$1.25 per sq. ft.

Linoleum, standard gauge, sq. yd. \$2.75
Mastipave—\$1.50 per sq. yd.

BattleShip Linoleum—1/8"—\$3.00 sq. yd.

Terazzo Floors—\$1.50 per sq. ft.

Marble Steps—\$2.50 per lin. ft.

Mastic Wear Coat—according to type—20c to 35c.

Hardwood Flooring—

Oak Flooring—T & G—Unfin.—

AUSTRALIAN APARTMENT HOUSE

(From page 38)

shades for walls and ceilings, varied from room to room.

One of the larger flats, furnished by the tenant, illustrates how the best features of modern decoration have been used. It includes a very large studio with two fluted columns, south and west walls entirely of glass and shaded with venetian blinds and alternating burgundy, green and blue curtains, and outside the windows, box gardens and a roof lawn.

A parquet floor is covered with loose mats. An alcove cocktail bar has an electric stove as well as a built-in refrigerator. Furniture consists of built-in settees and wrought iron chairs and tables with glass table tops. Concealed lighting comes from the top of the fluted columns and from fluorescent fixtures in the walls.

Otherwise this type of flat is similar to others in the building, the second bedroom being divided from the living room by folding doors to enable it to be used as additional living room space. The full south wall space of both rooms, as well as of the first bedroom, is of glass. The first bedroom has walls of pale pink and ceiling of light blue, with rust colored velvet curtains; the second bedroom cream walls, pale blue ceiling, gold quilted stain side curtains and white center curtains; and the lounge, pale blue walls and white ceiling with green, blue and silver velvet curtains.

For many Australians "Stanhill" is a tantalizing vision of the kind of living accommodation they may expect to become more common in the future —when there is less breathless urgency in the housing drive.

CALIFORNIA INTERNATIONAL HOME SHOW AND BUILDERS MARKET WEEK AT OAKLAND

Latest ideas in better living for Western families will feature the fourth annual California International Home Show and Builders Market Week in the Oakland (California) Exposition Building from March 8 to 16.

The Show is sponsored by the Associated Home Builders of the Eastbay, and will feature alternate materials for the building industry, and a Modu-flex home designed by Roger Lee, A.I.A., Berkeley architect, and built by Fred F. Chopin, president AHB, an outstanding example of teamwork between architect and builder, will be exhibited.

Builders from all parts of the West are expected to attend and it is expected public attendance will exceed last year's all time high of 65,000 persons.

HOLLYWOOD JUNIOR

Why built-in conduits and extra outlets win client satisfaction

Owners of new homes often need telephone extensions later on... in a bedroom, den or kitchen. When you plan built-in conduit and extra outlets for popular rooms, you're giving a service your client will appreciate. Then he can add extensions and not mar beauty of interiors through exposed wiring.

It's inexpensive to install facilities for concealed wiring during construction... the price of a few pieces of tubing. And your client's needs will be taken care of for now and the future. For free help in planning, call your local Pacific Telephone office today and ask for "Architects and Builders Service."

Put built-in telephone facilities in your plans

Pacific Telephone

IN THE NEWS

NEW WAREHOUSE IN LOS ANGELES

Said to be the largest plywood warehouse in the United States, a new structure has just been completed for the United States Plywood Corp. in Los Angeles, and Donald L. Braley, veteran West Coast plywood expert, has been named manager.

The new warehouse contains 60,000 ft. storage area, a 6,000 ft. office, showroom and sales room center, and a 30,000 ft. paved area for customer parking and truck maneuvering.

VETERANS HOSPITAL

The Veterans Administration, Washington, D. C., has announced plans for the construction of a 1,000 bed Neuro-Psychiatric hospital at Fort Funston in San Francisco.

Of reinforced concrete and structural steel construction the building will contain 12 inch walls, underground passageway and reinforced roof.

Estimated cost of the project has been set at \$25,000,000.

WORK BEGINS ON ORANGE ADDITION

Work has started on a \$150,000 wire mill as an addition to the Anaconda Wire & Cable Company's plant in Orange (California).

The one-story structure will be of precast concrete, with 160 x 220 feet of floor space.

APPOINTED NEW SALES AGENT

Harry M. Harris, Wichita, Kansas, has been named sales representative for the L. J. Mueller Furnace Co. of Milwaukee, and will represent parts of Missouri, Nebraska, Iowa, Kansas and Oklahoma.

U. S. MARINE PROJECT

Permanent construction has started on a \$3,500,000 development project for the U.S. Marine Corps at Camp Joseph H. Pendleton, Oceanside, and when completed will cover approximately 55 acres and consist of 10 barracks buildings, a mess hall, and administration building, two storage buildings, a recreation building and a boiler house.

The project has been developed by Perera & Luckman, Los Angeles firm of Architects and Engineers, and the construction is being done by the M. H. Golden Construction Co. of San Diego.

REALTY ASSOCIATION ANTI PUBLIC HOUSING

The Los Angeles public housing program was strongly attacked in a resolution adopted at a recent meeting of the Calif. Real Estate Association.

The resolution points out that the city's original plan to develop 10,000 dwelling units of public housing at a cost of \$100,000,000 (with no cost to the taxpayer) would actually result in a cost of some \$300,000,000 to the taxpayers of the city.

The resolution declared, "Federally subsidized public housing is a social experiment which has failed and instead of helping the needy, it has become a vehicle for special privilege and political patronage."

The entire program has been cancelled by the city council and will be submitted to the voters of Los Angeles at the June election.

NEW BLUEPRINT CABINET KEEPS PRINTS BETTER

The new DRAW-IN-DEX cabinet files blueprints safely and conveniently without wrinkles, creases or curled edges, and is designed for blueprints, photostats, charts and photo blow-ups, where a maximum of efficiency is desired. Each cabinet accommodates 1,000 prints; each print hangs smoothly; an index file locates prints instantly; each print is accessible and may be removed without disturbing others; suspension rods support drawings that are easily attached to manila hangers; aluminum hangers permit filing large number of drawings together.

Comes in 4 ft. high x 2 ft. 6 in. wide x 20 in. deep; 18-gauge steel top; 16-gauge reinforced steel sides; Card index and Lock. Colors Grey, Green, or Brown. Distributed by Berwin Trading Co., New York, N. Y.

NEW PLYWOOD MILL

The Long-Bell Lumber Co., are producing plywood from their new mill at Gardiner, Oregon, according to a recent announcement.

The new plant has a capacity of four and a half million square feet of $\frac{3}{4}$ in. basis per month.

PLANNING HEAD IS RENAMED

Dr. Walter L. Bingham of Laguna Beach has been re-elected chairman of the Orange County Planning Commission. H. Stanley Huntington of Villa Park has been named vice-chairman, and Harold St. Johns, secretary-treasurer.

MATERIAL DEALERS ELECT OFFICERS

The Building Material Dealers Association of Southern California recently elected E. E. Mauzey, Beverly Hills building material dealer, president of the organization for 1952, succeeding J. A. McKinnon.

Other officers named included J. A. McKinnon, vice-president; Harold B. Treasurer, and A. L. Clouse, Alhambra Building Material Co.; J. D. Eddy, Quality Materials Co.; W. D. Elting, Glendale Builders Sup-

ply; Sam Gordon, Atlas Building Materials Co.; Harold Green, E. Lockett & Son; Henry Kinland, Victory Materials Co.; B. E. Mauzey, Beverly Building Materials Co.; J. A. McKinnon, General Builders Supply Co.; William Movius, John & Wade, Inc.; Ray Schirm, Del Mar Building Supplies; Gordon Waterworth, L. A. Material & Supply Co., directors.

LOW RENT HOUSING PROJECT FOR EUREKA

The Housing Authority of the City of Eureka, California, is working on a 100-unit Low Rent Housing Project to be built in Eureka at a cost of \$750,000.

The project consists of 38 buildings, one and two story, frame, and stucco construction.

Frank T. Georgeson, Eureka, is the architect.

PERMANENT TROOP FACILITIES

The Corps of Engineers, U.S. Army, announced recently it would spend some \$12,614,800 in the construction of 42 buildings for troop spaces and supporting facilities at Fort Ord, Monterey county, California.

DUNCAN A. BROWNLEE JOINS UNISTRUT

Duncan A. Brownlee, Louisville, Ky., has been appointed as sales and service representative in the West Coast region for Unistrut Products Co. of Chicago, according to a recent announcement by John P. Heslin, vice-president in charge of the Western Division of the Company.

Brownlee will work with architects and engineers and Unistrut distributors in the coordinating of projects.

NAVY HOUSING FOR VALLEJO

The U. S. Navy, Bureau of Yards and Docks, has announced the construction of 358 housing units in Vallejo under the Wherry Act. Houses will be 2-story multi-family buildings of frame and stucco construction.

Barnett, Haynes & Barnett of San Francisco, are the architects.

NEW NEWSPAPER BUILDING

The Press Democrat Publishing Company of Santa Rosa, publishers of the daily Press-Democrat, are constructing a 1-story, 50x100, newspaper building.

H. M. O'Neal of Oakland is the structural engineer.

AWARDED ALASKA ARMY CONTRACT

Col. L. E. Seeman, Alaska District Engineer, Corps of Engineers, U. S. Army, reports that the Munter Construction Company of Seattle has been awarded a contract for the clearing of transmitter and receiver sites at the Elmendorf and Ft. Richardson air fields in Alaska.

The contract bid was \$199,139, and the government Fair Cost Estimate was \$233,334.

REDWOOD REGION CONSERVATION COUNCIL ELECTS WOHLBERG

E. T. Wohlberg has been re-elected president of the Redwood Region Conservation Council for 1952 at the Council's annual meeting recently held in San Francisco.

Other officers named included Sherman

A. Bishop, executive vice-president; Ben S. Allen, secretary; and Jack Fairhurst, treasurer. Named to the Board of Directors were R. J. Blitch, The Pacific Lumber Co.; R. W. Matthews, Brizard-Matthews Machinery Co., Eureka; A. O. Lelors, Hammond Lumber Co.; and Russell Ellis, Willits Redwood Products Company.

**RECORD BUILDING
PERMITS ISSUED**

In the last 10 years, Los Angeles has issued more than \$2,000,000,000 worth of building permits, according to G. E. Morris, superintendent of building and general manager of the Los Angeles Department of Building and Safety.

The report points out that the ten year period also covers the war years when much construction, particularly housing, was being geared to the war emergency.

**NEW WALL VENTS
PRESERVE PAINT**

A new type of wall vent tube efficient in preventing the lifting, peeling and blistering of paint, and one that can be locked in place has been announced by The Morell Cap & Tube Vent Co., Inc., of Cleveland, Ohio.

Known as the MORELL TUBE VENT, it has a domed cap that sheds water; fits flush against the siding; may be painted with house; and an almost invisible 1/16 in. slot in the home provides maximum efficiency in relieving pressure, circulating air, releases pocketed moisture and reducing the condensation in inner walls of tightly constructed houses.

Made of strong, lightweight non-rusting alloy, it is available in two models—serrated and threaded; is 2 in. long. Obtainable through jobbers.

**PLANT ENGINEER APPOINTED
TO REAL ESTATE DIVISION**

K. M. Paulson, for the past seven years Plant Engineer at Bethlehem Pacific's San Francisco yard, has been appointed manager of real estate according to S. L. Cray, company secretary treasurer.

Paulson is a graduate of the University of Oregon and has been with the San Francisco Bethlehem plant since 1936.

**ELDON SECHLER PROMOTED
TO ASSISTANT MANAGER**

Eldon Sechler has been promoted to assistant manager of the Los Angeles district for Detroit Steel Products and will serve directly under T. R. Wareham, district manager.

Wareham, in addition to his Los Angeles district duties, will serve in the newly created position of Regional Sales Manager for the Pacific Coast Division of the company.

LOS ANGELES COUNTY built 9% of the new homes built in America during 1950.

Captain Raymond Harvey Medal of Honor

THE 17TH INFANTRY REGIMENT was attacking Hill 1232 near Taemi-Doug, Korea. Able and Baker Companies became split by a Red-held ridge. Charlie Company, Captain Harvey commanding, was moving up to fill the gap when the dug-in Red guns pinned it down. Calling for covering fire, Captain Harvey advanced

alone through a hail of enemy bullets. One by one, he personally wiped out four emplacements of machine guns and automatic weapons. Then he caught a bullet through the lung. But he stayed on, refusing evacuation, until sure the objective had been won.

"In Korea," says Captain Harvey, "we stopped aggression by *united* strength. You were helping—every time you bought a Defense Bond. Because your Defense Bonds were doing more than just helping keep you, and your family, and your country financially stable. They were backing us up in the field with *American production power*, the surest support any fighting man can have!"

"I hope you'll go on buying Bonds—many, many of them. For your Bonds—and our bayonets—are making America strong. And in today's cold-warring world, *peace is only for the strong.*"

★ ★ ★

Remember that when you're buying bonds for national defense, you're also building a personal reserve of cash savings. Remember, too, that if you don't save *regularly*, you generally don't save at all. Money you take home usually is money spent. So sign up today in the Payroll Savings Plan where you work, or the Bond-A-Month Plan where you bank. For your country's security, and your own, buy U.S. Defense Bonds now!

Peace is for the strong...
Buy U.S. Defense Bonds now!

EDITORIAL NOTES

PUBLIC ? WELFARE

The Federal Security Agency has just released some startling figures on the costs of financing some three-hundred public welfare programs for the fiscal 1950 year, the last one for which figures are available.

One-third of all the money spent by federal, state and local governments went to maintain Public Welfare programs. It represents some \$23-billion tax dollars or 34.2 of all government spending. Put in another way; this represents a cost of \$575 for every taxpaying American family per year.

One person out of every thirteen receives a monthly income payment through governmental sources, other than as salary for federal employment, and if farm and other benefit programs were included, one in nine persons would be on the receiving end.

Social legislation is big, complicated, and costly. The problem should be primarily a local consideration—only as a last resort and in a very limited number of cases can federal action be justified.

It is true that Welfare Programs are necessary and desirable. It is not, however, necessary nor desirable for federal bureaus to seize upon various human needs as an excuse to extend federal control of and intervention into the lives of individual citizens.

You may think it is not your problem. You may think you are able to provide for yourself and your family. But the point is that the federal bureaus want to take over everybody's security, including yours, and they want you to help pay the whole bill. If you allow this you aren't going to have enough left to provide security for yourself and your own family.

This is one of the things to think about as you approach this year's all important elections—local, state, national.

Architect Registration in California began in 1901 when the State Legislature enacted the first laws providing for registration of architects.

EUROPEAN HOUSING

Housing conditions in Europe today prove that the only way to provide housing at a price the average person can afford is through private enterprise, unhampered by government controls.

In England, for example, the housing goal of 200,000 units for 1951 fell almost 80 per cent short. Private building of apartments for rent has gone forever and even the future of any private home

ownership is in grave doubt.

Thousands of people wait for homes. One private permit may be issued for every four of government housing, such permit is permissible and not mandatory with the result in many localities no private permits to build are issued at all.

Home ownership in America has always been a way of life, it's your responsibility to keep it that way.

The 1953 Federal Budget of \$85.4-billion is greater than ALL THE INCOMES of ALL THE PEOPLE west of the Mississippi.

A WISE PROGRAM

"If business is to be saved, it must be explained." In recognition of the simple fact that "business" either goes ahead or goes behind and that under present, rapidly changing and expanding worldwide economic conditions, it takes a lot of forward motion and effort for the average enterprise to maintain a status quo position, a vast new educational program has been launched in America to solve one of the very important problems of modern business complexities.

Sponsored by business, industrial, and financial leaders who recognize the acute need of acquainting many of their own employees and the public in general with some of the basic factors of American business procedures, this new educational effort is designed to eliminate the misconceptions of the true relationships between all phases of private enterprise.

This might be an excellent time and opportunity for those in Professional enterprise to launch a nation-wide educational program also.

Professional enterprise needs to be explained to the public just as fully as does any other enterprise. The average Mr. and Mrs. Public and the average Professional practitioner have too little understanding of each other.

Architects, Engineers, Contractors and allied interests are obviously faced with clearly discernible social and governmental trends, which if allowed to develop unhampered, could easily lead to a program of unnecessary and undesired bureaucratic controls.

Any educational campaign intended to explain a Profession, or business, is not an easy project to stimulate, even within the membership of the particular group affected, however, difficult as it may be it is still easier than trying to adjust yourself to compliance with arbitrary directives, or to conduct a public educational program seeking relief from an unfavorable situation already in existence.

LUMBER GRADES and INSPECTIONS

WEST COAST LUMBER INDUSTRY'S SCOTLAND-YARD BOASTS ENVIABLE RECORD OF MAINTAINING HIGH STANDARDS AND MEMBERSHIP PARTICIPATION

Out in the West Coast Douglas fir industry, apparently everybody loves honesty. How else account for the fact that the lumber industry's remarkable "Scotland Yard"—the West Coast Bureau of Lumber Grades and Inspections—today boasts its all-time high membership of supporting mills.

On January 1, 1952, this unique organization had 501 members whose combined output of West Coast species accounted for 75% of all lumber manufactured in the Douglas fir region; an all-time high—as ten years ago only 254 mills were supporting the grading and inspection program.

What has caused this rather astounding growth? During the war years, when grade-marked lumber brought a premium and many mills wanted and needed the service of this bureau, membership held about even. The big growth then has been in the past half a dozen years.

To Howard L. Brown, veteran of 32 years in the lumber business and general superintendent of WCBLGI, the increasing popularity of the Bureau is a mystery to be solved, but to H. V. Simpson, manager, the growth of the Bureau represents an increasing acceptance of the integrity of the Bureau grade-mark throughout the nation and continuing confidence in the hand-picked 180 inspectors and supervisors who make up the staff.

Simpson pays Brown credit for the Bureau's uniformly high standing throughout the lumber manufacturing and consuming areas.

"Brown has the ideal temperament for this most difficult post," Simpson pointed out. "He has the highest personal integrity and demands the same unassailable traits in his men. He is fair."

Best evidence of the high esteem in which this grading and inspection Bureau is held, Simpson observes, is the fact that mills find it easier to sell lumber which is under the supervision of the inspection bureau. Both buyer and seller accept the final decisions of this unique organization without question. The government recognizes its grade-mark integrity.

The Bureau has seven main functions, and to finance these activities West Coast sawmills last year spent \$1,331,722.67. In addition, mills in the same region spent another large sum in 1951 in support of the Pacific Lumber Inspection Bureau

whose inspection work is largely in cargo for export.

Few other industries in the nation approach this monumental effort of the West Coast lumber industry to guarantee the uniform quality of its products. The expenditure of nearly \$3,000,000 annually by this region to insure and maintain quality product controls is one of the high-water marks in industrial honesty.

Main purposes of the Bureau are: (1) to write, adopt and make available grading rules for West Coast species; (2) to interpret these rules; (3) to supervise the grading practices at the member mills so as to insure that the correct standard of grades is maintained at all times; (4) to educate and instruct people in correct grades and grading procedure; (5) to maintain and supervise the correct grade-marking of lumber when its official grade-marks are used; (6) to inspect and certify any shipment of West Coast species upon request; and, (7) to reinspect any shipment of West Coast species upon request.

Any manufacturer of West Coast species in the producing area can be a member of this Bureau. Ninety per cent of all lumber manufactured in the area is under the supervision of a qualified grading bureau. If not a member, any producer in the producing area or user of West Coast species can have use of any of the Bureau's services at a reasonable charge. All services of the Bureau are furnished at estimated cost. Grade-mark stamps are guarded zealously and use of these U. S. Government registered symbols is closely supervised for in their proper use lies the strength of this most unique of all industry-financed police forces.

First efforts to create a uniform system of grading on the Pacific Coast was undertaken in 1901 and rules adopted at that time became the basis for rules later enlarged and expanded by the West Coast Lumbermen's Association grading department when it was founded in 1911. There still exists a grading rule book dated 1898 and issued by California buyers of West Coast species.

Superintendent Brown has a "Little Scotland Yard" organization, even to the names of his staff members. Directly beneath him is H. H. Bethell,

AMERICAN INSTITUTE OF ARCHITECTS EMPHASIZES IMPORTANCE OF DESIGN

ANNUAL CONVENTION IN NEW YORK CITY JUNE 24-27
OF INTERNATIONAL IMPORT

The importance of the design of buildings in forming environments for human activity will provide the theme of the 84th annual convention of the American Institute of Architects, Glenn Stanton, president of the architects national professional organization has announced. The architects will meet in New York City, June 24 to 27.

The theme of the convention will be developed in its program to illustrate the formative influence of the architect's work, whether in the design of a modest individual house or of an entire city. The meeting will be addressed by leading members of the profession and guests especially chosen for their ability to contribute to the theme. A final program with the names and subjects of all speakers will be sent all A.I.A. members in the near future.

Arthur C. Holden, New York architect and convention committee chairman, heads a group that is arranging visits to buildings in New York, tours, inspections of architectural offices and other activities that will further illustrate the idea of architecture as a factor in man-made environment.

The great gain in building technology which has given today's architects unparalleled resources with which to create new environments, will receive special emphasis. The theme of the building products exhibit, "Structural Resources for Architectural Design," will carry out this idea. Executive arrangements for the exhibition have been undertaken by the Producer's Council, national headquarters in Washington, D. C.

(See Page 34)

REPORT OF AMENDED FAIR LABOR STANDARDS ACT AS APPLIED TO CONSTRUCTION INDUSTRY

BASED UPON STATISTICS OF THE U. S. LABOR DEPARTMENT'S
WAGE AND HOUR PUBLIC CONTRACTS DIVISION

Are employers in the construction industry generally complying with the amended Fair Labor Standards Act? Does the record indicate that management has a firm grasp of the Fair Labor Standards Amendments that went into effect on January 25, 1950? Recently released statistics on the first full year of operations under the amended Federal Wage and Hour Law show that there is room for improvement.

According to the 1951 annual report of the U. S. Labor Department's Wage and Hour and Public Contracts Divisions, 62 per cent of the establish-

ments investigated in this industry during the past fiscal year were found to have violated the Act's minimum wage, overtime pay or child-labor provisions.

"The 1951 record makes it clear that greater efforts on the part of some members of the construction industry would pay off in reduced liabilities for back wages owed employees," points out Wm. R. McComb, the Divisions' Administrator. His report shows that a total of \$331,229 in back wages was paid to 5,092 employees, as a result of the Divisions' activities. This sum does not include amounts awarded by courts to employees who exercised their statutory right to sue for back pay and liquidated damages.

"Although most employers know that the amendments raised the minimum wage to 75 cents an hour from 40 cents, the Divisions found that a sizeable minority of establishments—14 per cent of those investigated—had failed to observe this requirement when paying some of their employees," states McComb.

(See Page 31)

NOTICE!

Extended consideration of recent recommendations of A.I.A. and Producers Council national committeemen representing the "Joint Information Committee" has delayed release of further reports of A.I.A.-P.C. consideration of "uniform specifications" procedures.

This national program, which was inaugurated at the local A.I.A. Chapter level, will be further reported by ARCHITECT & ENGINEER as information on committee consideration, recommendations and action becomes available.

—A&E, Editor.

NEWS and COMMENT ON ART

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, has scheduled the following special exhibitions and events for the month of March:

Exhibitions: Fifth Annual of the Association of San Francisco Potters; Paintings and Sculpture by Barbara Herbert; Pacifica, an exhibition of Furniture, Textiles and Ceramics; Abstractions in Thread by Mariska Karasz; Chinese Paintings by Tseng Yu-Ho; Paintings and Watercolors by Harry Krell; and a group of Paintings by V. Douglas Snow.

The Museum also offers Permanent Exhibitions in the fine and applied arts and historical collections.

Among educational facilities and special events are lectures and Gallery tours, study rooms, art classes (for adult and children) and an art reference library.

PORTLAND ART MUSEUM

Thomas C. Colt, Jr., director of the Portland Art Museum, West Park and Madison, announces the following special events and exhibitions for March.

Pre-Historic Stone Sculpture of the Pacific Northwest; Work of Charles Heaney, Portland Painter and Printmaker; and a special showing of Photographs of Indians of the United States (1907-1930) which has been prepared by Edward S. Curtis. It is his second series of such photographs.

A number of Museum activities are also scheduled.

ART COLLECTION FOR RENT BY UNIVERSITY OF CALIFORNIA

The University of California Extension at Berkeley has made a circulating art exhibit available to the public.

The exhibit consists of 16 sets of prints, collected from art galleries throughout the world. Providing an unusual opportunity for the study and enjoyment of outstanding works of art, the sets may be used as gallery displays, for club programs, school and classroom exhibits, or for individual study.

Each set contains from 40 to 60 prints mounted on neutral gray matting board. An illustrated catalog giving information about the artists and their times is included.

The 16 groups are: Pre-Renaissance; Italian Renaissance (Florentine-Roman); Italian Renaissance (Venetian); Flemish-Dutch (Parts I and II); Rembrandt, Rubens, and Hals; Spanish; German; English-American; French (before impressionism); Impressionists; Van Gogh and Cezanne.

Contemporary French Painting; Picasso; Braque and Matisse; Contemporary American Painting; and Contemporary Painting of England, Italy, Germany, Norway, Cuba, South America, and Mexico.

MILLS ART GALLERY

The Mills Art Museum, Mills College, Oakland, is showing a special Centennial Exhibition of the best of its permanent collections, including painting, the graphic arts, sculpture, photography and the applied arts.

The work includes the Orient, America, and the Occident.

The exhibition will be open each Wednesday and Friday and Sundays from 2 to 5 p.m., March 6 to May 10.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, offers a variety of special exhibitions and events for March.

Exhibitions: 71st Annual Exhibition of Painting and Sculpture of the San Francisco Art Association; Contemporary Pottery and Jewelry; Paintings by Helene Schjerfbeck of Finland and an American Federation of Arts Exhibition; Contemporary Mexican Art; Prints by Podowski and Mrozewski of Poland; and Art Makes Contact, an offering prepared by the California School of Fine Arts.

A number of special events are scheduled including concerts and lectures and free classes in painting for adults and children.

CITY OF PARIS

The Rotunda Art Gallery of the City of Paris, San Francisco, under the direction of Beatrice

J. W. ROBINSON COMPANY

NEW DEPARTMENT STORE

BEVERLY HILLS, CALIFORNIA

The strikingly handsome J. W. Robinson Company's new six-million-dollar complete department store is an outstanding example of contemporary architecture and interior planning. It offers a lavish setting for fine quality merchandise ranging from women's high-fashion apparel to pots and pans.

Situated on a seven-and-a-half acre site in the heart of Beverly Hills, the new store is flanked by Wilshire and Santa Monica Boulevards, two of Southern California's major traffic arteries and the site is adjacent to the Los Angeles Country Club.

"The new companion store to Robinson's Downtown Los Angeles store," stated Edward R. Valentine, president, "meticulously follows the dictates of progressive merchandising practices and good taste for which the company has been known for more than sixty-nine years, and from the first sketch by the store designers to the completed building, no effort has been spared to accomplish the motive of creating one of the country's finest department stores."

From terrazzo paving to roof top, the new struc-

J. W. ROBINSON'S DEPARTMENT STORE

ture embodies the work of a multitude of creative craftsmen. Deep, soft-toned carpets, specially designed fixtures, the subtle use of color—all contribute to the atmosphere of smart luxury throughout the building's four stories. Proving that a structure can be both beautiful and functional in the overall design, for beneath the contemporary exterior lie architectural and engineering concepts that are based upon the most modern store planning methods.

Architecturally the new department store represents a number of innovations for the Pacific Coast:

It is the largest field-welded structure on the West Coast, with approximately 1700 tons of steel going into its construction; It contains one of the largest unobstructed areas with the center section of the first floor being 64 feet wide by 180 feet long without supporting columns; The building utilizes the largest amount of white marble ever used on a West Coast structure; and the parking area is one of the largest of any West Coast store, providing for the handling of 1100 automobiles at one time.

In addition to these features, the six-million-dollar store represents advanced architectural design and aesthetic beauty, and yet is based upon merchandising and customer requirements.

The frame of the building is welded steel, in which approximately 1700 tons of giant beams and girders were fused together to form the building's

skeleton. The interior arrangement decreed that the first floor should be unencumbered with columns or supports, with the result that a huge open vista area offers extreme accessibility, spaciousness and fluidity of store traffic. In addition, a high degree of flexibility permits for departmental rearrangement without costly structural work, and without changing lighting and sprinkler installations.

The building's exterior has been handsomely faced in Imperial white Donby marble from Vermont, black Andes granite from Brazil and architectural concrete. The marble has a honed finish and comprises the largest amount of white marble ever used on a Pacific Coast building. Alternate panels of black granite and large glass sections are used on the exterior of the first level, permitting window shoppers to view the entire floor. Above and beyond the marble, granite and glass is architectural concrete. The concrete is painted with a special surfacing that gives it a third-dimensional quality. Anodized aluminum provides the metal trim.

Of interest to visitors is the unique Garden Level, which has one wall entirely of glass, looking out on exotic California landscaping. In addition to the charm of the adjacent garden, surrounded by olive and palm trees and which has a focal point comprising statuary created by Bernard Rosenthal of Malibu Beach, the Garden Level is devoted to

ARCHITECTURAL DESIGNERS

William Pereira and Charles Luckman, senior partners in the architectural firm of Pereira & Luckman, and Charles

CHARLES O. MATCHAM

O. Matcham, a veteran Los Angeles architect, worked jointly in developing the new J. W. Robinson Department Store in Beverly Hills, Calif.

WM. PEREIRA & CHAS. LUCKMAN

ROBINSON'S DEPARTMENT STORE . . .

home furnishings from domestic and foreign markets. Here is found furniture, china, glass, lamps, curtains, draperies, gifts, appliances, radios, television, housewares, toys and an interior decorating studio. At night the view from this floor is greatly enhanced by the colorfully illuminated garden.

Private driveways to the store entrances lead from both Wilshire and Santa Monica Boulevards. The driveways continue to the two-level parking structure that accommodates 1100 cars. This area was developed by utilizing the slight slope of the site, with an upper deck built to park cars on the same grade as the first floor on the Wilshire side of the building. The lower level parking area is on the same grade as Santa Monica Boulevard. A private drive, 40-feet wide, connects both parking levels. This is one of the largest parking areas provided by any West Coast store.

Because the store-planners oriented the structure to merchandising requirements, use of long steel girders provide an unobstructed area of 64 by 180 feet on the first floor. Merchandise is offered on the "open vista" plan, so that patrons can view all departments and shops on this floor from any point in the large main floor area.

The first floor contains a group of related high-fashion shops known as "The Beverly Shops" in which patrons find women's sportswear, coats and suits, gowns, including the Adrian collection, furs, Bridal Shop, millinery, shoes and a Boutique. Silverware has been included among the departments on the Wilshire level, as have luggage, jewelry, hosiery, gloves, bags, cosmetics, blouses, stationery and candy.

The men's store occupies nearly one-fourth of the space on the first floor, and has its own entrance

Detail showing magnificent sweep of first floor interior arrangement and several Beverly Shops flanking the Adrian Shop. Richness of walls and floors and women's shoe department at left is indicative of the entire building which represents an investment of \$6,000,000.

... ROBINSON'S DEPARTMENT STORE

from Wilshire Boulevard. In this area are men's suits, overcoats, sportswear, furnishings, shoes and hats.

The second floor contains the "Robinaire Shops," which feature women's and misses' fashions at budget prices, the Young Californian shop, intimate apparel, the "Children's World," yard goods, notions and art needlework. The third floor, although designed to be expanded into selling areas, will be occupied by personnel offices, employees' cafeteria, terrace, rest rooms and hospital, as well as "The Pink Tent," an unusually attractive quick-luncheon facility for shoppers, which will be in operation in the near future, when strategic materials are available to permit installation of necessary equipment.

In the center of the building, two elevators and two moving stairways form a vertical transportation core. The moving stairways, four feet wide,

will each accommodate 8,000 persons per hour.

The entire lighting throughout the building provides the best features of both fluorescent and incandescent lighting and were scientifically developed for specific use.

The building is set back 80 feet from Wilshire Boulevard, providing room for attractive landscaping, as well as ample sidewalks. Old olive trees, with dark green shrubbery, extend across the face of the building to contrast with green lawns. Landscaping in the garden will follow season trends.

The actual planning of the new store goes back to 1947, when Raymond Loewy Associates commenced a study for the project. This study followed a previous economic study, made by George J. Eberle, which predicted the continuous growth of Beverly Hills and the western part of the Los Angeles area. In the Loewy study, directed by William T. Snaith, partner of the group, it was

A section of the second floor shows the "Robinaire" shops in which women's budget-priced merchandise is offered. Floor are fully carpeted in subtle tones and scientific lighting and attractive colors and designs add to store's beauty.

ROBINSON'S DEPARTMENT STORE . . .

determined that a complete department store was needed in Beverly Hills, and because of the buying habits of residents of the area, the store should be of the inverted type. In this concept, the store would offer on its first floor a series of high-fashion shops, conveniently related. A version of "arcade" shopping amid sophisticated specialty shop surroundings was the result.

Interior design has been concerned with the imaginative use of color, lighting and decoration along with such essential factors as customer-traffic flow. All floors are completely carpeted, to make shopping physically pleasant. Lighting combines incandescent with fluorescent illumination, and specially-created chandeliers and wall-fixtures enhance the atmosphere of each area. Decoration includes the use of both new and old materials in a pleasing manner for wall, panels

and floating shadow-boxes. Hand-painted murals, in simulated primitive techniques, grace the walls of shops and fitting rooms.

Customer services, in addition to comfortable carpeting, scientific lighting techniques and imaginative decoration, include time-saving package chutes that permit packages to be wrapped in a central room and quickly delivered by mechanical means to the package desk at the carriage entrance.

Just as a jewel demands a superb setting, so does the store deserve the finest in exterior arrangements.

Florence Yoch, landscape architect, selected old olive trees with ground work lacy Philodendrons, dark green Aucubas and other tropical plants for planting across the front of the building, with bands of grass for contrast in greens.

The attractive Garden Level offers a complete home furnishing floor. Entire area is floodlighted by daylight from the richly planted garden seen through the glass wall. Beyond the garden are parking facilities for 1100 cars on a two-level parking structure.

... ROBINSON'S DEPARTMENT STORE

The garden, which provides the tropical verdure associated with fine California establishments, also offers facilities for occasional exhibitions, fashion shows and similar events. The garden has been planted with full-grown trees of historical California types, including Mission olives, Canary pines, tropical palms and jacarandas.

Two stairways from the driveway and upper parking deck give access to the garden, and wide-paved walks lead to the doors of the ground floor departments. These walks are separated from the center of the garden by raised beds, which are planted with flowering shrubs giving seasonal color. During the winter season the beds will have large camellias and Chinese magnolias; in spring, wisteria, azalea and coral trees; in summer, hibiscus and blue jacaranda; and in the autumn, a hint of autumn foliage.

A focal point of the garden is a sculptured unit, created by Bernard Rosenthal, distinguished California sculptor. His design, executed in bronze and brass, is developed around an aquatic theme, interpreted through underseas plant and animal forms. Mr. Rosenthal integrated his design with

the architectural concept of the building.

Parking of cars without crowding was a prime consideration in the location and design of the store. Following an analysis, adequate parking facilities for 1100 cars simultaneously is provided. Allowing for an anticipated turnover of three and a half times per day, a total of 3500 cars can be accommodated on the two-level area.

The upper parking level is at the grade of the first floor on the Wilshire Boulevard side of the building, while the lower level is at the grade of Santa Monica Boulevard and the garden floor. Both levels are connected by a private drive forty feet wide.

Architects-engineers for the building were Pereira & Luckman, with Charles O. Matcham, architect. William T. Snaith of the Raymond Loewy Corporation was the store designer. Page Edward was project manager for the general contractors, the William Simpson Company. Landscape architects were Florence Yoch and Lucile Council, while other personnel included Paul Jeffers, structural engineer; Samuel E. Kaye, mechanical engineer; and Chauncey E. Mauk, electrical engineer.

"Open-Vista" sales space at the first floor provides ideal merchandise display.

FRONT ELEVATION OF THE NEW W. W. ROBERTSON BUILDING

STREAMLINED NEWSPAPER PLANT

DESIGNED WITH AN EYE ON TOMORROW

YAKIMA, WASHINGTON

By **ARTHUR W. PRIAULX**

Architect: **JOHN W. MALONEY**

General Contractor: **HOWARD S. WRIGHT**

In the sleek, streamlined W. W. Robertson Building, home of Yakima, Washington's two daily newspapers, Architect John W. Maloney has come up with a dream publishing plant.

Simplicity is the key note of the structure throughout. The pale, tan exterior walls of Indiana limestone blend well with the eastern Washington desert country. Only one story appears above ground, with the exception of a small second floor which houses refrigeration and ven-

tilating equipment. A basement, larger than the ground floor, reaches to the street line.

Architect Maloney had the problem of developing a publishing plant which would be weather-constant inside to facilitate proper printing conditions as well as to create healthy working conditions throughout the building. He wanted a sound-proofed structure where fatigue from noise could be kept to a minimum. He needed to create lighting, as near to natural light as possible.

. . . NEWSPAPER PLANT

Those problems were not too difficult to solve.

Interior weather control was accomplished with the installation of a combination heating system which works as a cooling system in summer. Most of the heating and ventilating machinery is in the second-floor at the rear. Sound proofing was accomplished by covering all ceilings and one third of all office walls from the ceiling down with acoustical tile and noise has been pretty well licked.

Daylight comes from the even glow of recessed fluorescent lighting fixtures installed throughout the two floors.

The real problem confronting Architect Maloney was to design a building which would combine the peculiar requirements of a modern newspaper's manufacturing plant with the news and business offices without conflict. For maximum efficiency a production flow must be maintained. News and advertising copy must flow smoothly to composing rooms, pictures to photo-engraving, then type and engravings must flow on to stereotype rooms and then stereotype plates must move quickly to pressroom and finished papers must hustle on to mailing and distribution rooms.

Maloney started his basic floor plan by separating the main divisions of the newspaper with sound proof walls of glass brick. Even the main

PRIVATE OFFICES: Easily available to public. Small reception desk is provided for reporters to interview callers.

BUSINESS OFFICE: Showing Public counter at left center. Acoustical tile ceiling reduces noise and recessed lighting eliminates eye strain.

NEWSPAPER PLANT . . .

newspaper press room was cut off from the composing room.

Across the front of the main floor, on either side of the imposing entrance and lobby, stretch a row of private offices which house the publisher and other executives of the two newspapers.

The general public is greeted by the combination receptionist and PBX operator when they step into the lobby and from there can be directed to any part of the sprawling publishing plant. A bank-type counter opens from a hallway to the business office where customers can be served by any department.

All business offices are to the right from the lobby. Here in an office-within-an-office are housed circulation, accounting, business and advertising offices with special rooms around this larger space for bookkeeping machines, addressograph machine, vault and manager.

Copy from the advertising department goes directly to the composing room. A door connects the two departments.

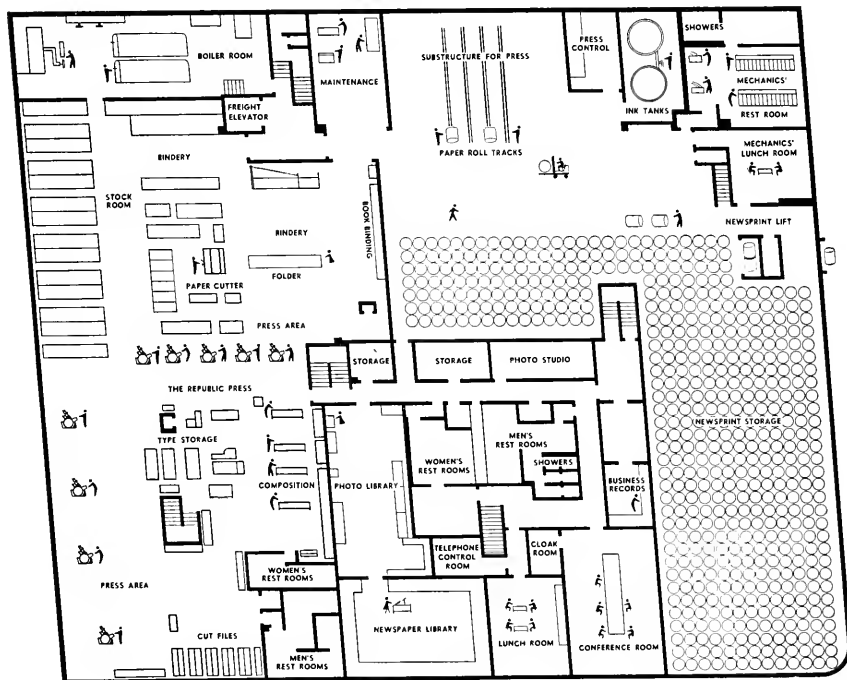

The news department opens from the left of the lobby. This is a streamlined office with copy from reporters and teletypes feeding to copy desk and finished copy going by pneumatic tube to composing room. Galley proofs come back to the copy desk by the same method. Photo engraving and offset plate making is done in a special department—a series of rooms—which adjoin the news room.

Composing room, stereotyping, press room occupy about a fourth of the ground floor. Press controls, newsprint storage and substructure for the new 64-page Goss news press occupy space in the basement directly beneath the composing room.

The commercial printing plant, separate entity from the newspapers, occupies one corner of both floors and has its own entrance at one corner of the front of the building.

Every effort has been expended to achieve a building which combines eye appeal and complete utility as well. Following the general scheme

Press Room: One that has plenty of light and is so designed that workmen have easy access to every unit.

of refined simplicity which a straight-lined building seems to give, a base of gray-black granite, streaked with coral pink, runs the full length of the building at sidewalk level and the same material makes up the imposing entrance to the structure. Pale green windows set off the tan and pink coloring.

Walnut panelling for counters, railing and trim make an attractive vista for the visitor as does the terrazzo flooring and the gay color scheme of the offices which are restful to the eye. Employee comfort has been the dominant factor behind much of the planning in this building.

The structure has been designed to carry two additional floors, in the event the community develops to the point where such expansion is needed. The overall size of the building is 140 by 175 feet on the ground floor and the slightly larger basement gives a combined floor space of 64,000 square feet. The building is deceptive in appearance and doesn't look as large as its actual size because of the usable space below ground level.

The building is reinforced concrete. The walls of the press room are built of glazed block to facilitate cleaning in this department.

ANNUAL CONVENTION CALIFORNIA COUNCIL OF ARCHITECTS

The 1952 Annual Convention of The California Council of Architects has been set for October 8-9-10, in Yosemite Park, according to an announcement by Fred A. Chase, executive secretary of the Council.

"Space is limited in Yosemite, so we are an-

nouncing the 1952 convention dates in plenty of time for every architect to make plans to attend," stated Chase.

SOUTHERN CALIFORNIA CHAPTER

Bryant Essick, president of the Essick Manufacturing Company of Los Angeles, and prominent in many civic affairs, addressed the March meeting on the subject "A Business Man Takes a Look at South America."

Essick is president of the Merchants and Manufacturers Association, the largest regional employer's association in the United States.

Also speaking at the meeting on the activities of the Board of Public Works, was C. Don Field, president of the Board of Public Works for the City and County of Los Angeles.

SAN FRANCISCO ARCHITECTURAL CLUB ANNOUNCES ANNUAL SEMINAR

The San Francisco Architectural Club is again offering an architectural seminar, or review course, for those who plan to take the examination of the California State Board of Architectural Examiners this year.

The seminar will consist of twenty lectures given by well qualified men of the architectural and engineering profession and will cover all the divisions of the examination.

With a few exceptions, the seminar lectures will be given only once a week, thus affording an opportunity to read reference material between class meetings. Each lecture will last approximately two hours on the following subjects:

Design and Supervision of Mechanical Equipment, I, II, III, and IV; Architectural History, I, II, III, and IV; Materials and Specifications; Architectural Engineering I, II, III, IV, V, VI, and VII;

Architectural Practice and Supervision I, and II; Architectural Planning; and Architectural Design.

The course is designed for those who are ready to take the State examinations this year, and are not designed or intended for beginners. Complete information is available from Club headquarters, 507 Howard Street, San Francisco.

WASHINGTON STATE CHAPTER

Robert Jones, member of the City Council of Seattle, spoke at the March meeting on the subject of "Architecture in Europe," having just returned from an extensive trip abroad. Also attending the meeting were William F. Devin, Mayor of Seattle, and Allan C. Pomeroy, who spoke briefly on the subject of building codes.

Edward L. Turner, Associate, and Chester L. Brown, Junior Associate, were welcomed as new Chapter members.

ARCHITECT LECTURES AT PORTLAND ART MUSEUM

Marion Ross, assistant professor of architecture at the University of Oregon, gave a lecture recently at the Portland Art Museum in conjunction with the Museum's outstanding exhibit of Portland Architecture, 1860-1890.

The lecture dealt with architecture of that period in the Portland area.

ARIZONA CHAPTER

The annual meeting of the Arizona Chapter of The American Institute of Architects was held March 1 in the Student Union Memorial Building on the campus of the University of Arizona.

Richard Drover of Phoenix was elected Presi-

dent, and chosen to serve as officers of the Chapter with him were Lew Place of Tucson, vice President; Martin Ray Young, Jr., of Mesa, secretary, and Fred O. Kniep of Tucson, treasurer.

The Executive Committee of the Chapter for the new year includes Richard Drover, Martin Ray

Clement T. Wiskocil, President; John S. Longwell, Vice-president; J. G. Wright, Vice-president; H. C. Medbery, Treasurer; R. D. Dewell, Secretary. Secretary's Office, 604 Mission St., San Francisco.

STRUCTURAL ENGINEERS ASSOCIATION SOUTHERN CALIFORNIA

Donald F. Moran, structural engineer with the Pacific Fire Rating Bureau spoke at the March meeting on "Design Factors Affecting Earthquake Insurance Rates on Buildings," and on the same program were:

Inspector Donald G. Wilson of the Dangerous Chemical Detail of the Los Angeles Fire Department who spoke on "Methods of Segregating, storing, and Processing Dangerous Chemicals," and:

George Bundick, engineer of the Los Angeles City Department of Building and Safety who dis-

cussed the city's new "Dangerous Chemicals Code."

The Association has been invited to join with the American Society of Civil Engineers on May 14 to celebrate the 100th anniversary of that organization. The Los Angeles Engineering Council of Founder Society is joining with the ASCE in this celebration.

DONALD F. SHUGART ELECTED PRESIDENT STRUCTURAL ENGINEERS OF CALIFORNIA

Donald F. Shugart, immediate past president of the Structural Engineers Association of Southern California and consulting engineer with offices in Los Angeles, has been elected president of the Structural Engineers Association of California for the year 1952.

Graduating from the California Institute of Technology with a degree of B.S.C.E., Shugart served as a pilot in the U. S. Army during World War I, and during World War II served as Commander of Base, Group and Wing, U. S. Air Corps, holding the rank of Colonel.

With the close of the War, Shugart opened offices in Los Angeles for the private practice as a consulting engineer.

ANNUAL CONVENTION STRUCTURAL ENGINEERS ASSOCIATION OF CALIFORNIA

Ben Benioff, general chairman of the Annual Structural Engineers Association of California Convention, has announced that the 1952 meeting will be held in Riverside on October 16 to 18.

Annual conventions heretofore have been held at Yosemite Park and Coronado, alternating years, but the attendance has grown to such an extent

that the Riverside site was chosen for this year's annual convention, and according to chairman Benioff, "plenty advance notice is being given of this year's meetings, so we can expect even a greater attendance."

**JOHN J. GOULD ELECTED PRESIDENT
NORTHERN CALIFORNIA ENGINEERS**

John J. Gould, consulting structural engineer of San Francisco, has been elected president of the Structural Engineers Association of Northern California for the year 1952.

In taking office Gould announced a six-point program of activities including 1) assistance in the nation's Rearmament Program, encouragement of employment of professional engineers at equitable fees, oppose bids on alternate designs submitted by contractors, advise Armed Forces that preparation of standard plans for Western areas by Western designers will save money; 2) Collaborate with Civilian Defense Program based upon sound engineering principles, encourage exchange of views on long-term construction developments designed to furnish better bomb protection; 3) Give undivided support to Private Enterprise with minimum control by Government.

**JOHN J. GOULD
SEAN President**

Promote adoption of basic principles of the Field Bill of checks and balances to other laws dealing with construction and the engineering profession. Reject principle of discriminatory legislation by the State against engineers and architects in private practice. Demonstrate to industry that continued maintenance of the private enterprise system is dependent upon strong professional groups; 4) Promote better Employer-Employee relations. Encourage the betterment of working conditions and the paying of adequate wages both in Government and private employ, to eliminate any need

of unionism in the engineering profession. Analyze effects of centralized Government control on the security of civil service employed engineers; 5) Stimulate Research Programs for greater economy in construction. Explore the many possibilities of collaborative efforts with local universities; and 6):

Revise Building Codes where requirements are too stringent or do not meet present day conditions. Reduce conservative earthquake requirements of Appendix "A", San Francisco and Uniform Building Codes.

Other officers elected to serve with Gould included, G. A. Sedgwick, Vice-President; Art B. Smith, Jr., Secretary; Franklin P. Ulrich, Treasurer; Robert P. Moffett, Assistant Secretary; William K. Cloud, Assistant Treasurer; and Robert D. Dalton,

Edited by Phil Brown, OTIS ELEVATOR COMPANY.

On February 1 we had the pleasure of attending a dinner in honor of Mr. A. Naughtan Lane, National President of the Producers' Council, Inc., at the Sir Francis Drake Hotel in San Francisco.

The guests present included many prominent local architects and engineers.

After dinner, and prior to Mr. Lane's address, we received an announcement from Mr. Art Staat, San Francisco Chapter President, concerning the actors and technical directors of the 21st Annual Jinx Production, "Bells-A-Poppin," a comedy in two acts and various other interruptions. The entire operation of writing the script, organizing the details, preparing the stage settings, and the performance by the outstanding cast of producers and architects was dubbed with the title, "Operation Oswald."

It was only fitting that an award of achievement should be made in the presence of Mr. Lane and distinguished guests, and an appropriate statuette of "Oswald" was presented to everyone participating in the Xmos production.

The photograph of "Oswald" clearly shows that it is a product of true inspiration and architectural accomplishment, displaying a feeling and appreciation of the finer things of life. There was considerable discussion regarding the possibility that one of the producers or architects had actually modeled for "Oswald" but this was denied by the creator, Mr. Bill Corlett.

After the presentations, we had the pleasure of hearing Mr. Lane tell us about the difficulties that confront the building industry today. He pointed

out that the building industry was the largest industry in the country during the past year and that it is the only industry of its size that does not have the proper type of organization in Washington.

It is because of this that we are not getting our proper share of the restricted materials while other non-defense industries, which do have adequate representation in Washington, are getting adequate supplies.

Mr. Lane went on to point out that the Government agencies are completely confused and that they are continually releasing contradictory information which spreads the confusion to the construction industry.

Although the various branches of the construction industry are represented, it was Mr. Lane's opinion that the various associations and councils are not sufficiently organized to shout loudly enough at the Washington level to bring about a correction in the allocation of the few materials that are holding up the entire building program today.

In conclusion, Mr. Lane stated that we are trying to bring about an organization in Washington which will alleviate the problem and he stressed the point that the construction industry must be organized at the local level before it can effectively present its case at the Washington level.

Informational Meeting by Johns-Manville Sales Corporation

The second informational meeting of 1952 was held on February 11 at the Palace Hotel in San Francisco, at which time the Johns-Manville Corporation presented the "Relative Merits of Various Insulating Materials."

The introductory remarks were made by Mr. George Connolly, while the major portion of the program was presented by Mr. Max Barton.

Although the title of this presentation indicated an extremely broad field, the major portion of the

(Continued on opposite page)

"OPERATION OSWALD"
Art Staat

USE QUALITY PRODUCTS

CONSULT AN ARCHITECT

program was concerned with the benefits of mineral wool when used as an insulator.

Mr. Barton enumerated the advantages of mineral rock wool, which included its high insulation qualities, sound deadening and insulation effects and fire prevention when used in walls and ceilings which resulted in better health conditions, reduced redecorating expense due to the reduction in interior condensation, fire prevention and the reduction in furnace capacities for insulated structures.

Mr. Barton stressed the point that only mineral rock wool should be specified where fire protection is needed in schools and homes. It was pointed out that there were many substitute wools which will provide the same insulating characteristics but will not afford the same fire protection.

This meeting was different from others in that one material was considered in detail with the presentation of technical data and advantages. It is felt that this type of program will be of greater interest to the architects who specify this type of material.

The Council is very anxious to learn the reaction of both the architects and Producers' Council members to this type of informational meeting in lieu of the more general talks which have been presented in the past.

Hats Off Department

We offer our congratulations to Mr. Arthur C. Staat, President of the San Francisco Chapter of Producers' Council, who has been promoted to Manager of the San Francisco Office of the Natural Gas Equipment Company.

LABOR STANDARDS

(From Page 8)

"Even more extensive were overtime pay violations, found in 61 per cent of the investigated establishments. Employers should remember that the amended Act continues to require payment of at least time and one-half the employee's regular rate of pay for all hours worked in excess of 40 in the work-week, except where the Act specifically provides otherwise. What the amendments did was to define the regular rate to include all remuneration for employment except certain specified payments."

Failure to comply with the Act's child-labor provisions was disclosed in 2 per cent of the investigated establishments, McComb noted. The child-labor requirements set a minimum age of 16 for most jobs with 18 as the minimum for occupations designated hazardous by the Secretary of Labor. Employment of boys and girls of 14 and 15 years

of age is permitted in a few types of jobs—such as office and sales work—under strict restrictions on hours and working conditions.

The Administrator wants members of the industry to know that the violations found last year were not representative of the compliance record of all employers whose employees come within the provisions of the Act. The Divisions' policy is to make investigations where there is reason to believe that violations will probably be found. Moreover, experience demonstrates that the great majority of employers intend to comply with the Act; in most cases, failures are due to misunderstandings about the statutory provisions.

To assist the construction industry in attaining full compliance, McComb invites any employer who has questions about the Federal Wage and Hour Law to inquire of the nearest regional office of the Divisions. These offices are located in the following cities: Boston, New York, Philadelphia, Birmingham, Cleveland, Chicago, Kansas City, Dallas, San Francisco, and Nashville.

Young, Jr., Gordon Luepke of Tucson, Fred Weaver of Phoenix, and Ed Varney of Phoenix.

Wives of the architects and guests were taken on a conducted tour of the Union Building during the business session and later were shown a number of paintings donated to the University by the Kress family.

ARCHITECTURAL LEAGUE NEW YORK NATIONAL GOLD MEDAL EXHIBITION

The Architectural League of New York, organized in 1881, has held fifty-four annual exhibitions to honor the designers of work of high merit in the various arts, and has awarded gold and silver medals and honorable mention to many of those participating in these exhibitions.

Carrying on the spirit which has made these exhibitions such stimulating occasions, the League announces a series of exhibitions for 1952 of limited size and of potential Gold Medal quality. These exhibitions will be held in the League headquarters, 115 East 40th Street, New York, and will be under the management and direction of the National Gold Medal Exhibition Committee.

Five monthly exhibitions will be held for the following arts: Landscape Architecture; Mural Painting; Architectural Works; Design and Craftsmanship in Native Industrial Arts; Sculpture. These exhibits are to be limited to work executed since 1951, and work may be submitted as a single project or general in nature. Exhibitors must be citizens of the United States.

ARCHITECTURAL DESIGNS OF SCHOOLS PLACED ON DISPLAY

A preliminary exhibit of over 100 architects' designs for new school buildings throughout the United States and Canada, have been placed on display at Teachers College, Columbia University, New York.

The designs include site planning and blue prints, with many beautifully executed perspectives and miniature models.

The exhibit is to be shown in Los Angeles some time during the spring months.

A.I.A. NATIONAL COMMITTEE ASKS FOR CRITICAL MATERIALS

Seeking a fair share of critical materials for the construction industry, representatives of The American Institute of Architects recently met with Federal officials in Washington, D. C.

Appearing on behalf of school construction was Henry L. Wright, vice president of the Southern California Chapter, A.I.A., and C. Day Woodford, Chapter secretary.

Architect and Government committee representatives also met with NPA and presented a program of advanced planning based upon availability of materials.

CALIFORNIA COUNCIL OF ARCHITECTS

The first meeting of 1952 of the California Council of Architects was held the latter part of February at the Hotel Claremont, Berkeley, with a record number of Chapter representatives and guests present.

Devoting two days to consideration of professional matters, a large number of subjects vital to the practice of architecture in California and the West Coast were discussed.

Tentative plans were made to seek the national A.I.A. Annual Convention for California during 1955 or 1956.

John J. Gould, Leslie W. Graham, J. Albert Paquette, John E. Rinne, Hyman Rosenthal, and G. A. Sedgwick, Directors.

STRUCTURAL ENGINEERS ASSOCIATION NORTHERN CALIFORNIA

The March meeting was devoted to a three part discussion of current situations of particular interest: 1) "Addition to the Metropolitan Life Company Building," by Herbert L. Lyell, in which the new, modern structure being erected in San Francisco was thoroughly described; 2) a discussion of "Sheetrock as a Structural Material," by Robert R. Matheu; and 3) "After Lateral Forces — Then What? !."

New members recently welcomed included Lester C. Bush, Paul J. Cannell, and Richard J. Woodward. Merrill R. Neumann and Arnold Olitt, Affiliate Members; and John B. Jessup, Junior Member.

H. J. BRUNNIER, ENGINEER, NAMED ROTARY INTERNATIONAL PRESIDENT

H. J. Brunnier, San Francisco structural engineer, has been nominated for 1952-53 president of Rotary International, according to a recent announcement of the Club's nominating committee in Chicago.

Brunnier will become president when Rotary convenes for its annual international convention in Mexico City on May 25-29.

FEMINEERS

The March activities of The Femineers was centered around a "After Taxes Party" at the California Golf Club on the 15th.

Mrs. Art B. Smith, Jr., was in charge of arrangements which included a dinner and dance.

On March 19 the group held their regular meeting at the Elks Club, San Francisco.

NAMED ASSOCIATE DIRECTOR OF SOUTHWEST RESEARCH INSTITUTE

Dr. Louis Koenig, industrial research chemist and executive, has been named an associate director of Southwest Research Institute, San Antonio, Texas, according to an announcement by Dr. Harold Vagtborg, president.

Dr. Koenig goes to San Antonio from Palo Alto, California, where he was assistant director of research of Stanford Research Institute and was in charge of activities in chemistry, chemical engineering, air pollution, metallurgy, ceramics, food technology and applied biology.

Prior to his work on the Pacific Coast Dr. Koenig served as research executive and chairman of chemistry and chemical engineering at the Armour Research Foundation of Chicago.

Notes on Quality LIGHTING:

Here in the West the installation assuring maximum lighting efficiency with minimum service and maintenance is, by every standard of comparison, SMOOT-HOLMAN. The hallmark of quality in better buildings is the presence of SMOOT-HOLMAN equipment.

The New D-P Seal-Lux, pictured above, is a vapor-tight fluorescent luminaire built for high efficiency and rugged service life under the most exacting conditions.

SMOOT-HOLMAN COMPANY Registered Calif. Offices in Principal Western Cities - Branch and Warehouse in San Francisco

A.I.A. DESIGN

(From Page 8)

Technical sessions of the convention will follow the general theme, but with greater emphasis on structural resources of the architect. A major focus of interest this year is the relation of structure to materials conservation objectives required by the defense effort. The program will include material on pre-stressed concrete, thin shell vault and dome construction, prefabricated structural unit construction in concrete, reinforced brick masonry, aluminum as structural frame material, and trends in structural design theory applied to reinforced concrete and steel, including welded steel. The American Institute of Architects wishes to acknowledge the Centennial of the American Society of Civil Engineers, and will invite members of that society to present certain aspects of the theme.

"The quarter-century since the American Institute of Architects last met in New York City have been rich in illustrations of the architect's work in housing, redevelopment and city planning," Mr. Holden said.

"Our work in designing airports, terminals, shopping centers and similar types of modern buildings has required the development of the architect's

understanding of human activities, routines, and processes. Our buildings today are designed to strengthen and support activities. Today's architecture has become dynamic as it deals with the movement of people, the flow of traffic, or the requirements of people doing things. Whether we are designing a kitchen or a department store, our planning is responding to a new understanding of the importance of buildings as the place where things happen."

"In his analysis of such problems the architect enlists the contribution of many specialists—economists, engineers, analysts and experts of many sorts. These consultants are increasingly valuable. But in arriving at his solution and expressing it in design, the architect has to make his way pretty much alone. That is why architects are trying to strengthen and broaden their conception of their job."

"The idea of the organized man-made environment as a device for synthesizing and expressing the many functions of a building is one of our most productive concepts. It is equally important that our clients, those who build today, have a better appreciation of what is possible and desirable from the art of building in their own time."

The exhibition of building products will be the largest ever to be shown at an A.I.A. meeting, according to Mr. Holden. Over sixty leading manufacturers of building materials and equipment will show their products during the convention in an exhibition organized by A. Gordon Lorimer, New York City architect. The Producers' Council, an organization of manufacturers in the building field, is actively cooperating in the exhibition.

PARKSIDE LIBRARY

(From Page 24)

to seek knowledge," in that it appears a good deal like a refined night club with its gay turquoise, yellow, and natural brick color scheme. It has spacious floor-to-ceiling windows which are set at a 45-degree angle, and in one corner is a natural brick fireplace with a giant copper hooded chimney that offers only the warmth and friendliness given by an open fire.

Sleek modern furnishings specially designed give the feeling of a plush living room. Floors are covered with quiet cork base material and built into the floor is a radiant heating and cooling system which keeps the rooms at even temperature.

Wide, folding doors have been provided so that the area may be set aside for educational or cultural meetings.

The main reading room is designed to receive a maximum of natural daylight which comes from a north exposure through a long wall of glass.

Roof overhangs are engineered throughout so that no direct sunlight strikes the interiors where people are reading. Free standing bookstacks divide the room at eye level into adult, teen-age, and juvenile sections, and the arrangement permits supervision by a small staff from a central library deck, or control center. The youngsters space, decked out with lint sized stools and special reading tables has proven very popular. Adjacent to this area is an outdoor reading terrace where children and adults may relax and enjoy the comforts of the out-of-doors and a good book. Bright, informal, landscaping in the terrace lends the atmosphere of a home patio.

The attractive entrance inaugurates an innovation in library buildings, in that adjacent to the large glass doors are built in display windows where new or currently popular books, manuscripts, and other items of outstanding public interest may be displayed and easily viewed from the exterior of the building.

The entire appearance of the building, exterior and interior, is that of a community center and visiting professional librarians who have seen the building since its completion proclaim it "the finest branch library in the country."

NEWS & COMMENT ON ART

(From Page 9)

Judd Ryan, is featuring the 10th Annual Pacific Coast Textile Exhibition of hand woven and hand printed fabrics during March.

The special exhibit is the work of forty designers and presents a diversity of western originality.

Decorative Cocks and Horses inspired by Mexican and Folk Art and featuring the work of Jesus Reyes Ferreira is being shown as the "Pictures of the Month."

ELECTED PRESIDENT ASSOCIATED GENERAL CONTRACTORS

Arthur S. Horner of the A. S. Horner Construction Company, Denver, Colorado, is the newly elected president of The Associated General Contractors of America, Inc., representing more than 6,000 leading construction firms.

He succeeds Glen W. Maxon of the Maxon Construction Company of Dayton, Ohio, who served as association president during the past year.

Other officers elected included C. P. Street of McDevitt & Street Co., Charlotte, N. C.; W. Murray Werner, The Werner Co., Shreveport, La., Chairman Building Contractors' Division; F. W. Heldenfels, Jr., of Heldenfels Bros., Corpus Christi, Tex., chairman High Contractors' Division; Edward P. Coblentz, McLean Contracting Co., Baltimore, Md., chairman Heavy Construction and Railroad Contractors' Division.

BOOK REVIEWS PAMPHLETS AND CATALOGUES

TOOL STEEL HANDBOOK. By Allegheny Ludlum Steel Corp.,
2020 Oliver Building, Pittsburgh, 22, Pa.

A new 197 page book designed for engineers, teachers, metallurgists and others interested in tool, die and allied steels. It is intended also as companion literature to the previously published "Stainless Steel Handbook," and "Strength of Stainless Steel Structure Members as Function of Design" as well as other literature on silicon and electrical steels and other specialty steels.

Contains charts and tables giving specific and comparative data on properties of all important grades of tool steels, analyses and applications; also detailed description of grades, arranged alphabetically for easy reference, Heat treating and handling techniques and a complete set of weight tables and other useful reference material is included.

Copies available to qualified persons upon request to Allegheny Ludlum Steel Corp.

AN ESSAY TOWARD ARCHITECTURE. By Pierre C. Zoelly.
Publisher, Carnegie Press, Pittsburgh, Penn. Price \$2.50.

The book consists of a selection of graphic illustrations of some basic architectural ideas which the author first prepared in large poster form as teaching aids for beginning students. For the most part this series of drawings, and their accompanying notes, represent an approach to architectural design based upon Alberti's elements of architecture—the roof, the wall, the opening, etc., and the author has shown them with great clarity in their three basic stages of development.

The author has added a few illustrations of sample concepts which the freshman architectural student is asked to explore.

THE ENGINEERS ILLUSTRATED THESAURUS. By Herbert Herkimer. Publisher Chemical Publishing Co., Inc., 212 Fifth Ave., New York. Price \$6.00.

The book presents over 8,000 illustrations of machine elements and assembled machinery for the engineer, designer, draftsman and manufacturer to select the machine parts or equipment most suitable for his special purpose. It also serves as an efficient guide for students and beginners.

Every conceivable type of machine element is clearly reproduced and identified. Where necessary an explanation of the method by which it accomplishes its particular function is given, and for additional convenience there is an exhaustive index to save time.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

355. REVOLVING DOORS

International Steel Company, manufacturers of revolving doors, recently issued a book which gives a complete story of its products and facilities. Included in the book are several pages of typical installations of revolving doors in buildings across the nation. The book, entitled "This Is International Steel," serves as a catalog for purchasers of International products. 44 pages, illus., 1/51.

356. PROPELLER FAN STANDARDS

A reliable guide for buying, selling and specifying products is available to equipment dealers through the use of Commercial Standards published by the U. S. Department of Commerce. A Commercial Standard is a description of the characteristics of the article and covers the accepted methods of testing and rating. A Standard may also specify the installation deemed necessary for satisfactory service to the consumer. The development of these standards is not the result of orders from any governmental agency, but is due to the direct voluntary efforts and arrangements made by qualified representatives of the trade or industry involved. The Commodity Standards Division of the Department of Commerce, in cooperation with the U. S. Bureau of Standards, serves as an impartial fact-finding agency; establishing a clear basis for confidence and understanding between buyer and seller. Through voluntary guarantees made

by manufacturers subscribing to the Commercial Standard, the public is afforded a fair basis for judging competitive brands. Copies may be obtained by writing directly to the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. The cost is 5c each.

357. FUSION WELDING OF NICKEL

A new booklet on the fusion welding of nickel and the high nickel alloys has just been published by The International Nickel Company, Inc. It includes more than 30 tables and almost 50 drawings and photographic illustrations. A complete technical treatise on the subject, it covers various forms of electric arc welding as well as gas welding. There are over 20 chapters and sections covering, in addition to detailed welding instructions, such information of importance to production and welding engineers as the boiler code of the American Society of Mechanical Engineers, pickling, testing and inspection safety methods and associated topics. T-2, 44 pages illus., 10/51.

358. CEILING OUTLETS FOR AIR DISTRIBUTION

A new edition of the Venturi-Flu Air Distribution Catalog, F-4085-1, is now available. Announces the new Venturi-Flu-Lite representing the combination of engineered air distribution and interior lighting. Gives comprehensive engineering information. AIA-30E, 18 pages, 11/51.

359. NON SPARKING STATIC DISCHARGING TERRAFLOOR

A comprehensive specification guide for the NonSparking--Static Discharging--conductive Terra Floor is covered by the LeRoy Olson Company in their booklet. The booklet covers complete information covering electrical resistance specified by the U. S. Public Health Service, Hospital Facilities Division. Also are detail specs covering installations over all types of slabs and radiant heat. A further detail is the drawings included for assistance in specifying unitary bases. A.I.A. 23-D, 14 pages, illus., 10/51.

360. THRESHOLDS

Architects and designers concerned with threshold applications will find detailed information in this new file-size portfolio containing over 20 individual plates. Full size cross-sections, dimensions, typical installation drawings and specifications furnish quick information on Abrasive Cast, Extruded and Rolled Steel Thresholds. Various tread surfaces of Ferrogrit, Alumogrit, Bronzogrut and Nicklogrit are detailed in cast metal, and the aluminum and brass extruded are shown in the various corrugated, fluted and other types. A.I.A. 14-B, 2/18/52.

361. INVISIBLE WARMTH

Six types of National Aero Converters that produce a method of concealed heating for homes, stores, offices, schools and institutions are described and illustrated in Catalog No. 594 now being distributed by The National Radiator Co. The booklet states that convected and radiant heat are obtained from convactor installation. Convected heat is created, says the literature, by the cast iron convactor warming and distributing large volumes of moderately warmed air. Radiant heat is said to be created through the convactor warming the steel National Art Enclosure which covers the convactor. "Invisible Warmth," as the new literature is titled, shows both frequent and infrequent piping connections, rough-in dimensions, and convactor ratings for either steam or hot water use which have been determined in conformance with Commercial Standard CS 140-47. A.I.A. 30-C-14, 26 page illus., 2/21/52.

362. MOVABLE METAL WALLS

"Mobilized Interiors--the efficient, economical way to solve your space problems" is the theme of Mills new catalog. This book was designed specifically as a working tool for architects, engineers, contractors and building professionals--the men who deal directly with the problem of changing space requirements in offices, factories, schools, hospitals and laboratories, commercial, industrial and institutional buildings of every type. Besides numerous installation and construction photographs and detailed construction drawings, the book contains complete specifications data. Cat. 52, 48 pages illus., 1/52.

LUMBER GRADES

(From Page 7)

assistant general superintendent, who was raised with a two-by-four in one hand and a grading rule book in the other. Eight men serve as district supervisors at eight Bureau offices scattered up and down the Pacific Coast and into the principal consuming areas of the east. Thirty men, with a combined experience in lumber of more than 1,000 years, make up the supervisory staff. Still retaining the flavor of Scotland Yard is the next and most numerous bracket, the 150 inspectors who handle much of the on-the-spot work of the Bureau.

Brown picks these men from the cream of the crop. They have to be not only good, but superior.

Here's an idea of why the Bureau is so effective and well thought of generally by lumbermen. During 1951 the 30-man supervisory staff made 8,467 calls and visits to mills. One purpose of the calls was to educate mill employees. This is done through close personal supervision and intensive training. A training program for mill graders occupies some of their time. Graders are approved to use WCBLGI grade stamps only after they have checked out three different and consecutive times by a Bureau staff member and only after they have proven that they can maintain a grading efficiency

of at least 95% which is the allowable tolerance of human error permitted.

The lumber industry has taken every possible precaution to insure maximum service to the purchaser of West Coast species. Bureau offices are maintained at Seattle, Eugene, Medford, Los Angeles, Washington and New York, in addition to Portland headquarters. Resident supervisors are maintained the year around at Eureka, California; Kansas City, Missouri; San Francisco; and Chicago.

While the Bureau is the final and sole authority in interpretation of West Coast lumber grading rules, Bureau officials are constantly working to improve and perfect the rules. Bureau officials work with the U. S. Forest Products Laboratory at Madison in a constant series of tests and samplings to maintain stress and structural grade standards. They consult with architects and engineers when compiling grading rules.

What many people maybe don't know about modern-day grading rules is that they are based on intended use of the particular piece of lumber. There are still appearance grades in the finish and clear items, but now, structural and stress grades are developed on the basis of what they will do in a particular job. Today an engineer and designer or architect knows exactly how a given grade of Douglas fir or West Coast hemlock will perform, for impartial laboratories have made exhaustive tests. Thanks to these tests, lumber today is an engineering material.

The GI's obstacle-course tune-ups are kid's play compared to the mental gymnastics which Superintendent Brown puts his supervisors through at regular intervals. His inspectors and supervisors are hand-picked from industry, but they must submit to rigid training, frequent examinations, actual grading tests in front of their fellow supervisors. A 1,000 years of critical knowledge watches their every move in these nerve-shattering tests.

Probably the answer to this rapid increase in membership in the famed West Coast Bureau is that the grade-mark has become the Lumber Hall-Mark of integrity.

ARCHITECT NAMED TO HEAD RED CROSS DRIVE

William E. Hartman, partner in the firm of Skidmore, Owings & Merrill, has been appointed to head up solicitations within the architects groups of the 1952 Red Cross Fund campaign's business division, for Chicago.

The campaign which opened March 1, is being conducted among some 1000 architectural employees.

ESTIMATOR'S GUIDE

BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight charge, at least, must be added in figuring country work.

BONDS—Performance or Performance plus Labor and Material Bond(s), \$10 per \$1000 on contract price. Labor & Material Bond(s) only, \$5.00 per \$1000 on contract price.

BRICKWORK—MASONRY—

Common Brick—Per 1 M laid—\$100.00 up (according to class of work).
Face Brick—Per 1 M laid—\$200.00 end up (according to class of work).
Brick Steps—\$3.00 and up.
Common Brick Veneer on Frame Bldgs.—Approx. \$1.20 and up (according to class of work).
Face Brick Veneer on Frame Bldgs.—Approx. \$2.00 end up (according to class of work).
Common Brick—\$36.00 per M—truckload lots, delivered.
Face Brick—\$81.00 to \$106.00 per M, truckload lots, delivered.

Gleazed Structural—

Clear Gleazed—
2 x 6 x 12 Furring.....\$1.60 per sq. ft.
4 x 6 x 12 Partition.....1.70 per sq. ft.
4 x 6 x 12 Double Faced.....
Perftion.....2.25 per sq. ft.
For colored gleaze add.....30 per sq. ft.
Mantel Fire Brick—\$105.00 per M—F.O.B. Pittsburgh.

Fire Brick—Per M—\$111.00 to \$147.00.

Cartage—Approx. \$10.00 per M.

Paving—\$75.00.

Building Tiles—

8 1/2 x 12-inches, per M.....\$139.50
6 5/8 x 12-inches, per M.....105.00
4 5/8 x 12-inches, per M.....84.00
Hollow Tile—
12 x 12 1/2-inches, per M.....\$146.75
12 x 12 1/2-inches, per M.....156.85

Sheathing Papers—
Asphalt sheathing, 15 lb. roll.....\$2.00
30 lb. roll.....2.75
Dempcourse, 216 ft. roll.....2.95
Blue Plyboard, 60 lb. roll.....5.10

Felt Papers—

Deadening felt, 36 lb., 50-ft. roll.....\$3.23
Deadening felt, 1 lb.,.....3.79
Asphalt roofing, 15-lb.,.....2.00
Asphalt roofing, 30-lb.,.....2.79

Roofing Papers—

Asphalt Kfg., 15 lb.,.....\$2.09
Standard Grade, 108-ft. roll, Light.....1.87
Smooth Surface, Medium.....2.18
Heavy.....2.56
M. S. Extra Heavy.....2.76

BUILDING HARDWARE—

Sash cord com. No. 7.....\$2.65 per 100 ft.
Sash cord com. No. 8.....3.00 per 100 ft.
Sash cord spot No. 7.....3.65 per 100 ft.
Sash cord spot No. 8.....3.35 per 100 ft.
Sash weights, cast iron, \$100.00 ton.
1-ton lot, per 100 lbs.....\$3.75
Less than 1-ton lot, per 100 lbs.....\$4.75
Nails, per keg, heavy.....\$11.80
8-in. spikes.....11.80
Rim Knob lock sets.....1.60
Butts, dull brass plated on steel, 3/8 x 3/4......76

CONCRETE AGGREGATES—

The following prices net to Contractors unless otherwise shown. Carload lots only.

	Bunker per ton	Del'd per ton
Gravel, all sizes.....	\$2.38	\$2.90
Top Sand.....	2.38	3.13
Concrete Mix.....	2.38	3.06
Crushed Rock, 1/4" to 1/2".....	2.38	2.90
Crushed Rock, 3/4" to 1 1/2".....	2.38	2.90
Roofing Gravel.....	2.81	2.90
River Sand.....	2.50	3.00
Sand—		
Lepus (Nos. 2 & 4).....	3.56	3.94
Olympic (Nos. 1 & 2).....	3.56	3.88

Cement—

Common (all brands, paper sacks), carload lots, \$3.55 per bbl. f.o.b. car; delivered \$3.65.
Per Sack, small quantity (paper).....\$1.05
Carload lots, in bulk per ton.....2.79
Cesh discount on carload lots, 10c a bbl., 10th Prox., less then carload lots \$4.00 per bbl. f.o.b. warehouse or delivered.
Cesh discount 2% on L.C.L.

Trinity White { 1 to 100 sacks, \$3.13 sack
Medusa White { warehouse or del.; \$9.56
bbl. carload lots.

CONCRETE READY-MIX—

1-2-4 mix, to 10 yards*.....\$12.00
10 to 100* yards.....11.00
100 to 500 yards.....10.50
Over 500 yards.....10.30
* Delivered to site.

CONCRETE BLOCKS—

	Haydite	Be- all
4 1/2 x 8 1/2-inches each.....	\$1.17	1.18
8 1/2 x 8 1/2-inches, each.....	.72	.75
8 1/2 x 16-inches, each.....	.26	.26
12 1/2 x 16-inches, each.....	.34	.39
12 1/2 x 24-inches.....	—	.60
Haydite Aggregates—		
3/4-inch to 1/2-inch, per cu. yd.....	7.25	
1/2-inch to 3/8-inch, per cu. yd.....	7.25	
No. 6 to 0-inch, per cu. yd.....	7.25	

DAMPPOOFING and Waterproofing—

Two-coat work, \$9.00 per square.
Membrane waterproofing—4 layers of saturated felt, \$10.00 per square.
Hot coating work, \$5.00 per square.
Medusa Waterproofing, \$3.50 per lb. San Francisco Warehouse.
Tricoat concrete waterproofing, 60c a cubic yd. and up.

ELECTRIC WIRING—\$15 to \$20 per outlet for conduit work (including switches).
Knob and tube average \$6.00 per outlet.

ELEVATORS—

Prices vary according to capacity, speed and type. Consult elevator companies.
Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about \$9,500.00.

EXCAVATION—

Sand, \$1.00; clay or shale, \$1.50 per yard.
Trucks, \$30 to \$45 per day.
Above figures are an average without water. Steam shovel work in large quantities, less; hard material, such as rock, will run considerably more.

FIRE ESCAPES—

Ten-foot galvanized iron balcony, with stairs, \$250 installed on new buildings; \$300 on old buildings.

FLOORS—

Asphalt Tile, 1/8 in. guege 18c to 35c per sq. ft.
Composition Floors, such as Magnesite, 40c-1.25 per sq. ft.
Linoleum, standard guege, sq. yd.....\$2.75
Mastipave—\$1.50 per sq. yd.
BattleShip Linoleum—1/8"—\$3.00 sq. yd.
Terrazo Floors—\$1.50 per sq. ft.
Terrazo Steps—\$2.50 per lin. ft.
Mastic Waer Coat—according to type—20c to 35c.

Hardwood Flooring—

Oak Flooring—T & G—Unfin.—
Clear Old, White.....\$425 1/2 x 2 3/4 x 2
Clear Old, Red.....405 405 x 30
Select Old, Red or White.....340

3/32 x 2 1/4 2nd Grade.....	360.00
3/32 x 2 1/4 3rd Grade.....	320.00

Floor Layer Wage \$2.50 hr.

GLASS—

Single Strength Window Glass.....\$.30 per sq. ft.
Double Strength Window Glass......45 per sq. ft.
Plate Glass, 1/4 polished to 75.....1.60 per sq. ft.
75 to 100.....1.74 per sq. ft.
1/4 in. Polished Wire Plate Glass.....2.35 per sq. ft.
1/4 in. Rgh. Wire Glass......71 per sq. ft.
1/4 in. Polished Wire Plate Glass......20 per sq. ft.
1/4 in. Rgh. Wire Glass......44 per sq. ft.
1/4 in. Obscure Glass......40 per sq. ft.
1/4 in. Obscure Glass......44 per sq. ft.
1/4 in. Heat Absorbing Obscure......58 per sq. ft.
1/4 in. Heat Absorbing Wire......86 per sq. ft.
Glazing of above additional \$1.15 to 30 per sq. ft.
Glass Blocks, set in place.....3.50 per sq. ft.

HEATING—

Average, \$3.50 to \$4.00 per sq. ft. of radiation, according to conditions.
Warm air (gravity) average \$64 per register.
Forced air average \$91 per register.

INSULATION AND WALLBOARD—

Rockwool Insulation—	
(2") Less than 1,000 sq. ft.	\$64.00
(2") Over 1,000 sq. ft.	59.00
Cotton Insulation—Full thickness	
(3½")	\$95.50 per M sq. ft.
Sisalation Insulation—Aluminum coated on both sides	\$73.50 per M sq. ft.
Tileboard—4½" panel	\$9.00 per panel
Wellboard—½" thickness	\$55.00 per M sq. ft.
Finished Plank	\$69.00 per M sq. ft.
Ceiling Tileboard	\$49.00 per M sq. ft.

IRON—Cost of ornamental iron, cast iron, etc., depends on designs.

LUMBER—

S4S No. 2 and better common	
O.P. or D.F., per M f.b.m.	\$100.00
Rough, No. 2 common O.P. or	
D.F., per M f.b.m.	100.00

Flooring—

	Per M Delvd.
V.G.-D.F. 8 & Btr. 1 x 4 T & G Flooring—	\$225.00
"C" end better—	225.00
"D" end better—	225.00
Rwd. Rustic—"A" grade, medium dry	185.00
8 to 24 ft.	
Plywood, per M sq. ft.	
½-inch, 4.0x8 S-I-S	\$170.00
½-inch, 4.0x8 S-I-S	\$200.00
¾-inch, per M sq. ft.	315.00
Plywood	11½¢ per ft.
Plyform	25¢ per ft.

Shingles (Rwd. Not available)—

Red Cedar No. 1—\$9.50 per square; No. 2, \$7.00; No. 3, \$5.00.	
Average cost to lay shingles, \$6.00 per square.	
Cedar Shakes—½" to ¾" x 24/26 in. hand split tapered or split resawn, per square	\$15.25
¾" to 1½" x 24/26 in. split resawn, per square	17.00
Average cost to lay shakes, \$8.00 per square	
Pressure Treated Lumber—	
Wolminized—Add 35¢ per M to above	
Crescoted—	
8-lb. treatment—Add 45¢ per M to above	

MARBLE—(See Dealers)

METAL LATH EXPANDED—

Standard Diamond, 3/40, Copper Bearing, LCL, per 100 sq. yds.	\$43.50
Standard Ribbed, ditto	\$47.50

MILLWORK—Standard.

D. F. \$150 per 1000. R. W. Rustic \$175 per 1000 (delivered).	
Double hung box window frames, average with trim, \$12.50 and up, each.	
Complete door unit, \$15 to \$25.	
Screen doors, \$8.00 to \$12.00 each.	
Patent screen windows, \$1.25 a sq. ft.	
Cases for kitchen pantries seven ft. high, per lineal ft., upper \$9.00 to \$11.00; lower \$12.00 to \$13.00.	
Dining room cases, \$20.00 per lineal foot.	
Rough and finish about \$1.00 per sq. ft.	
Labor—Rough carpentry, warehouse heavy framing (average), \$75.00 per M.	
For smaller work average, \$85.00 to \$100. per 1000.	

PAINTING—

Two-coat work	per yard 85¢
Three-coat work	per yard \$1.10
Cold water painting	per yard 25¢
Whitewashing	per yard 15¢
Linseed Oil, Strictly Pure	
(8oz. 7½ lbs. per gal.)	Raw Boiled
Light iron drums	per gal. \$2.28
5-gallon cans	per gal. 2.40
1-gallon cans	each 2.52
Quart cans	each .71
Pint cans	each .38
½-pint cans	each .24
Turpentine	
(8oz. 7.2 lbs. per gal.)	Pure Gum Solvents
Light iron drums	per gal. \$1.65
5-gallon cans	per gal. 1.76
1-gallon cans	each 1.88
Quart cans	each .54
Pint cans	each .31
½-pint cans	each .20

ARCHITECT AND ENGINEER ESTIMATOR'S DIRECTORY

Building and Construction Materials

EXPLANATION—Building and construction materials are shown in major classified groups for general identification purposes with names and addresses of suppliers of materials listed in detail under group classification where name first appears—main offices are shown first with branch or district office following. The numeral appearing in listings refers to the major group classification where complete data on the dealer, or representative, may be found.

CENTRAL CALIFORNIA CHAPTER, ASSOCIATED GENERAL CONTRACTORS OF AMERICA, with the assistance and cooperation of secretaries of General Contractors Associations and Builders Exchanges of Northern California; and the above information for Southern California is furnished by the Labor Relations Department of the Southern California Chapter, ASSOCIATED GENERAL CONTRACTORS OF AMERICA.

NEWSPAPER PLANT

(From Page 22)

One feature which Architect Maloney has followed throughout the building is unique in newspaper offices. The private office of each department head is so constructed that this executive has a clear view of his entire department through properly installed glass windows.

Asphalt tile flooring has been installed in most of the offices, but wooden block flooring has been installed in the mechanical departments. Wooden block flooring is easier on the feet where men are standing all day long.

The new building, together with new 64-page Goss press, cost \$1,000,000.

So well designed is this structure that no noises from press room and composing room reach the quiet of the news room or the business offices. This is an accomplishment when so much noise-making equipment is housed in a relatively small structure right up next to offices where elimination of noise is an aid to fatigue reduction as well as to error reduction in copy.

Howard S. Wright, of Seattle, was general contractor on the W. W. Robertson Building. Assistant Architect James W. Maloney was Howard Jackson, architect's representative.

DIRECTIVE FORBIDS CONTRACTORS TO HIRE THROUGH EMPLOYMENT AGENCIES

A directive has been issued by the Army Corps of Engineers forbidding contractors on projects financed by the U. S. Government funds to hire workers through employment agencies "where a fee is charged to the employees."

This action is the result of a vigorous campaign waged by the Construction Men's Association, a mutual welfare organization of more than 10,000 construction specialists and technicians who make a career of working in foreign countries for American construction firms.

More than 183,000 men are currently working on 100 projects around the world, many of which are

defense bases.

The directive was issued by Charles R. Brodner, acting assistant District Engineer, Atlantic District, Corps of Engineers, New York City and includes a statement on "personnel recruitment policy on fixed fee contracts under the jurisdiction of the Corps of Engineers.

"In the future, it shall be a policy of the fixed fee contractors to avoid the use of private employment agencies where a fee is charged to the employees. The use of any such private agency is expressly prohibited until all other sources of supply have been exhausted and prior authority has been granted by the District Engineer for the use of the facilities of referenced agencies. It shall be the responsibility of each fixed fee contractor to strictly enforce the above stated policy."

PRODUCERS COUNCIL SOUTHERN CALIFORNIA

A joint meeting of the Southern California Chapters of the American Institute of Architects and The Producers Council, was recently held in Los Angeles with Charles Fry, president of the local A.I.A. Chapter and Harold Smith, president local Producers Council sharing presiding honors.

Speakers at the joint conference included Naughton Lane, National President of the Producers Council and Dr. Neil Jacoby, Dean of the School of Business Administration at UCLA.

Recent new members include Fred Smith of the Hunter Douglas Corp., and Donald Dunning of the Hollobilt Company.

AMERICAN SOCIETY FOR METALS

John F. Baisch, Research Engineer of the Boeing Airplane Company, presented a technical discussion on "Titanium" at a recent meeting of the Society, explaining that this new "wonder" metal is growing up the hard way but its strength-weight ratio and excellent corrosion resistance will give it a place with major structural materials.

All homes—large or small—need extra outlets, concealed wiring

All home owners may want to add extra telephone extensions sometime in the future—in the living room, bedroom, kitchen—wherever they're needed. That's why it's so important to include built-in conduit and outlets in your plans. The cost is small, but the convenience is great.

Wires won't be exposed when you install concealed raceways during construction. And your customer's telephone needs will be taken care of for now and the future. For free help in planning, call your local Pacific Telephone office and ask for "Architects and Builders Service."

Put built-in telephone facilities in your plans

All homes—large or small—need extra outlets, concealed wiring

All home owners may want to add extra telephone extensions sometime in the future—in the living room, bedroom, kitchen—wherever they're needed. That's why it's so important to include built-in conduit and outlets in your plans. The cost is small, but the convenience is great.

Wires won't be exposed when you install concealed raceways during construction. And your customer's telephone needs will be taken care of—for now and the future. For free help in planning, call your local Pacific Telephone office and ask for "Architects and Builders Service."

Put built-in telephone facilities in your plans

The Pacific Telephone and Telegraph Company

IN THE NEWS

AIR FORCE BASE EXPAND

Congress has allocated funds for expansion of the Travis Air Force Base near Fairfield to accommodate another Reconnaissance Wing.

According to U. S. Air Force officials in Washington, D. C., some \$18,800,000 will be expended for this purpose in the immediate future.

ARCHITECT SELECTED FOR HEALTH CENTER

The Board of Supervisors for the county of Marin have commissioned architect R. E. Hammond of San Rafael to draft plans and specifications for the construction of a new County Health Center Building.

The new building will be of 1-story, frame and stucco construction, and will represent an expenditure of some \$100,000.

ELECTRONIC LABORATORY

Architect Eric Mendelshon of San Francisco is the architect for a new Electronic Plant being constructed in Palo Alto for Varian Associates.

The project, costing \$500,000, will include a research laboratory, administration building, shops and a cafeteria.

NEW BUILDING SERVICE

The Ford J. Twaits Co., construction engineers and general contractors of Los Angeles, has formed a new development division which will be in charge of Mort Balogh.

The new activity will provide clients with a complete building service that includes construction, site selection, interim financing, and sale of the completed structure, according to Ford J. Twaits and Carl H. Willenberg, firm partners.

OPENS ARCHITECTURAL OFFICE ON WEST COAST

Isadore Rosenfield, architect and hospital consultant of New York City, has opened offices for the practice of architecture in association with Rex Whitaker Allen, architect, at San Francisco.

Offices for the new architectural association have been established at 566 Commercial Street.

SCHOOL BONDS VOTED

Voters of the Jackson Union High School District have approved a bond issue of \$189,000 for construction of an addition to the Jackson High School.

The addition will include science, home economics, shop, drawing room, locker rooms, and toilet rooms.

NEW DOWNEY AREA SCHOOL

Architects Allison & Rible of Los Angeles are completing details for the construction of the new \$1,000,000 North Junior High School in Downey which will be ready for occupancy in September of next year.

The school will be of steel and wood frame construction and will comprise 15 buildings to accommodate 900 to 1,000 children.

HAWTHORNE ADDS TO HIGH SCHOOL

The Mineral County High School Board

of Education, Hawthorne, Nevada, is completing plans with architect Russell Mills of Reno, for the construction of a 6-class room, administration, and shop addition to the local High School.

Of reinforced concrete and frame construction the project will cost \$200,000.

ARCHITECT CHOSEN FOR SCHOOL WORK

Charles E. Butler, architect of Salinas, has been commissioned by the Monterey Unified School District, Monterey, California, to design a new elementary school for the new Wherry Housing Project now under construction near Monterey.

The new school buildings will comprise 10 classrooms, administration offices, multipurpose rooms, kitchen, and toilet rooms, and will be built of frame and stucco construction.

NEW PUTTY-LESS SKYLIGHTS

A new type of extruded aluminum skylight has been developed by the O'Keefe Company of San Francisco, representing no putty seal and a minimum of maintenance.

The new skylight is simple to install at

low cost; lengths of heat absorbing, lightweight glass may be obtained in 12 ft. lengths if desired; bars are cut and bolt holes punched ready for installation. Strength tested at University of California Materials Testing Laboratory, and approved by Uniform Building Code Technical Committee.

ARMY HOUSING PROJECT

A plan has been announced for the construction of 500 housing units on the Presidio of San Francisco under terms and provisions of the Army Wherry Housing Act.

The project consists of 250 2-bedroom, multiple type houses and 250 3-bedroom multiple type houses, all of frame and stucco construction. Cost is estimated at \$4,498,900.

ARCHITECT CHOSEN FOR SCHOOL

The Sacramento Unified School District has selected architect Gordon Stafford of Sacramento to design an addition to the Mark Twain Elementary School.

The addition will consist of 4 classrooms.

WILL REMODEL RENO HOSPITAL

The Board of Regents of the University of Nevada have authorized architect Russell Mills of Reno, Nevada, to draft plans for remodel of Lincoln Hall and the Hospital Building on the University's campus in Reno.

The work will include a new heating plant and other interior and exterior alterations.

NEW DRUM PLANT FOR PITTSBURG

The Continental Can Company of Chicago, Ill., has announced the start of construction on a new \$2,000,000 Fibre Shipping Drum Manufacturing Plant in Pittsburg, Calif.

Of one-story construction, the building will contain some 300,000 sq. ft. of space, while a two-story steel frame building section containing office facilities will also be a part of the project.

NEW AIRCRAFT PLANT HAYWARD

The Transocean Air Lines, with general administrative offices at the Oakland Municipal Airport, have leased a substantial plot of ground near the Hayward Municipal Airport in Alameda County, for construction of a new aircraft plant.

LOW INCOME HOUSING PROJECT FOR MODESTO

The Housing Authority of Stanislaus county is sponsoring the construction of 150-low income housing units at Modesto.

Of concrete block and frame construction, with cement tile roofs, the project will cost \$1,250,000.

Donald Powers Smith of San Francisco is the architect.

JUVENILE HALL ADDITION

The Board of Supervisors of Tulare County recently authorized the construction of a \$120,000 addition to the Juvenile Hall building in Visalia.

A kitchen, dining room facilities, and remodel of security quarters is included in the plans being drafted by architect James P. Lockett.

LOW INCOME HOUSING

The Housing Authority of Stanislaus County is constructing a 150-unit low income housing project in Modesto, consisting of duplex residences; concrete block and frame construction with cement tile roofs.

Donald Powers Smith of San Francisco is the architect. Cost of the project is estimated at \$1,250,000.

SCHOOL BONDS ARE VOTED

Voters of the Santa Clara Elementary School District in Santa Clara, recently approved a bond issue of \$890,000 for construction of an addition to the Santa Clara Elementary School.

NAMED CONCRETE PRESIDENT

A. T. Goldbeck, engineering director, National Crushed Stone Association, Washington, D. C., was elected president of the American Concrete Institute at the group's 48th annual convention, recently held in Cincinnati, Ohio. He succeeds Harry F. Thomson of Chicago, Illinois.

Other officers elected included J. W. Kelly, Civil Engineering Department, University of California, Berkeley, California, and Bailey Tremper, Materials and Research Engineer, Washington State Highway Department, Olympia, Washington, Directors for a three year term.

NEW BUILDING FOR MEDICAL COLLEGE

A new library-administration building is being constructed on the Loma Linda campus of the College of Medical Evangelists,

Los Angeles, at a cost of \$300,000.

Designed by Architect Earl Heitschmidt the building will house 60,000 volumes, a museum, five tiers of stacks and reading rooms, and an administration section of offices and council room.

NEW MUSIC BUILDING FOR UC AT BERKELEY

The Board of Regents of the University of California have authorized preliminary plans for the construction of a \$1,600,000 Music Building on the Berkeley campus.

REMODEL GOLDEN HOTEL IN RENO

Architect Edward H. Fickett of Los Angeles has been commissioned to redesign the lobby, casino, lounges, restrooms, and a new snack bar for the Golden Hotel in Reno, Nevada.

JEWELRY STORE FOR PASADENA

Architects Pereira & Luckman have designed a new jewelry store for B. D. Howes & Son, Pasadena.

The new building will cost an estimated \$200,000 and will represent one of the latest to be built in Pasadena's rapidly developing shopping area.

LOW RENTAL HOUSING PROJECT AT SALINAS

The Housing Authority of Monterey county has commissioned architect Charles E. Butler of Salinas, to draft plans and specifications for a 100 low rental housing unit project to be constructed in Salinas.

The buildings will be one and two story construction of frame and stucco construction.

FOR VALLEJO

Elvin Van Ness and Charles A. Russell of Oakland are constructing 186 new homes in Vallejo (California) at an estimated cost of \$1,674,000. The residences are to be of frame and stucco construction and are designed for rental purposes.

ELEMENTARY SCHOOL

Architect H. L. Gogerty of Los Angeles has completed preliminary drawings for the construction of a 10-classroom central Elementary School in Corcoran for the Corcoran Elementary School District.

The building is to be of reinforced concrete and frame construction.

SWIMMING POOL

The City of Sanger, Fresno county, will construct a \$100,000 municipal swimming pool as the result of approval of voters to a recent bond issue.

Architect Walter Wagner of Fresno has been commissioned to design the reinforced concrete structure.

MILITARY HOUSING

FHA has insured mortgages totaling well over \$200 million on an estimated 80 projects scattered through 25 states which will provide homes for 25,000 families of military personnel.

GI HOME MARKET STILL GREAT

More than 13-million veterans of World War II have not used their GI loan privileges under the GI Bill of Rights.

IT TAKES an average of 1,420 man hours to build the average one family home, and at present average hourly wage rates this represents an amount of \$3,081.40.

CHURCHES CAN BE DIFFERENT

Ingenuous western architects have created a dramatic, modern Gothic style in church architecture that is commanding world-wide attention.

Partially made possible by modern construction materials, today's new style Churches are featured in this issue.

Architect Warren Weber, A.I.A., of Portland, Ore., has designed this unique Cedar Hills Community Congregational Church for his city. For complete story see Page 12.

EDITORIAL NOTES

ECONOMY BEGINS AT HOME

Progressive minded citizens have always sought ways and means of building their communities, cities and towns.

If a new postoffice was needed, if a larger courthouse was necessary, if a park was required the Chamber of Commerce and Planning Commission were found out in front working for the improvement desired.

As communities developed, many public projects were built solely from local funds, but in the years before Federal Budgets reached monumental proportions most communities also eagerly sought federal projects.

But the Tax Burden which all share today has had a sobering effect on local spenders. Citizens of communities everywhere are coming to realize that it is their money that Washington is spending. It is their own children and grandchildren who will carry the future public debt load.

Thus, it is logical that a nationwide movement has developed to minimize, during the defense emergency at least, the spending of Federal Funds for local projects. A sound policy of Public Economy begins at home.

The federal government has taken away from the general contracting industry the ability to give to public bodies and private investors in construction the reasonable assurance that projects can be completed on normal schedule and at estimated costs.—Glen W. Maxon. Pres. The Associated General Contractors of America.

WITHOUT BENEFIT OF ARCHITECT

One of the larger West Coast metropolitan daily newspapers recently published a special Sunday feature article, profusely illustrated and supported by a number of "allied" industry advertisements, on the advantages of remodeling an old house, rather than building a new one.

The material was well considered and most certainly presented in an interesting manner.

But, the element of this presentation to the general public that struck an immediate sour note was the glaring, large, black type headline stretching completely across the full page which placed emphasis on the remodeling of a home "without an architect."

As a magazine that has consistently advocated and devoted considerable time, effort and space to the many advantages of architectural and engineering services, ARCHITECT & ENGINEER can not agree with, or pass without this comment, the newspaper's position that architectural services

are not needed in the instances which are illustrated in the feature article.

The long hours of advance study and years of experience and practice in the field of architecture, new building materials, and construction methods, makes the services of any qualified Architect valuable to any home owner whether it be in the design of a new residence, or the remodel of an old one.

Architects CAN make any home more livable.

"Whether the men of the United Nations are engaged in combat or are standing on a truce line makes no fundamental change in the need for building strength for the defense of freedom throughout the world."—Charles E. Wilson, Director of Defense Mobilization.

HOUSING IN EUROPE

A special report disclosing results of a first-hand survey made last summer on "Housing in Europe" has just been published and released by the National Association of Home Builders of America

The fourteen page printed booklet is the result of an inspection in which a number of prominent American builders viewed first-hand the progress of postwar building programs in England, France, Germany, the Netherlands, Italy and Switzerland.

Conditions observed ran from good to very bad.

European land planning and so-called community living programs seen in Holland and Switzerland, the best housed countries visited, were excellent. The worst housing was observed in France and Italy, while the home building in England has been virtually stymied by government controls because only one-fifth of the housing built is for sale, the remainder is government built for occupancy by approved tenants.

The Committee was formed to examine critically everything new and different in house design, materials and construction methods. Primary objective being to study European housing trends which might produce new ideas on low cost housing for America's low income families.

The trip permitted conferences with foreign builders, architects, and housing officials, and field trips in the five nations visited.

Studying the European postwar housing experience gave the U. S. builders a new appreciation of the great progress made in this country, as conditions in Europe today prove that the only way to provide housing at prices the average person can afford is through private enterprise, unhampered by government controls.

NEWS and COMMENT ON ART

AWARD WINNERS ANNUAL PAINTING AND SCULPTURE ANNOUNCED

Some eighty-six works were selected by the juries for inclusion in the 71st Annual Painting and Sculpture Exhibition of the San Francisco Art Association which has been showing at the San Francisco Museum of Art.

First award in painting, the \$300 Anne Bremer Memorial went to Ralph Du Casse; and the \$300 San Francisco Art Association Emanuel Walter Purchase prize was won by James Lee Hansen.

Fifteen other cash awards were made totaling some \$1725.

CALIFORNIA PALACE OF THE LEGION OF HONOR

Thomas Carr Howe, Jr., Director of the California Palace of the Legion of Honor, Lincoln Park, San Francisco, has announced the following schedule of exhibitions and special events for April:

EXHIBITIONS: Paintings by Joseph Onato—San Francisco at Night; Paintings by Robert Watson; Paintings in Encaustic by Gilbert Steed; the Achenbach Foundation for Graphic Arts—Time and Man, and The Garden; and a special display of Loan Exhibitions at the San Francisco Public Library showing three Centuries of Botanical Prints, and The Church Year.

EVENTS: An Organ Recital is held each Satur-

day and Sunday at 3 p.m. featuring Richard Purvis and Ludwig Altman. Classes in painting for children, ages 6 through 14, are held each Saturday at 10:00 a.m. and Free Motion Pictures are shown each Saturday at 2:30 p.m.

CITY OF PARIS

The Rotunda Art Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, will offer an Exhibition of Paintings in Oil by D. Faralla, and an exhibition of Oils and Water colors by Theodore Polos and Alexander Nepote during the month of April.

The Pictures of the Month showing will feature Lucile Brokaw (Van Riemsdyk) work.

PORTLAND ART MUSEUM

Thomas C. Colt, Jr., director of the Portland Art Museum, West Park and Madison, announces a busy schedule of events and exhibitions for the Museum during April.

Included among Committee activities is consideration of the Committee of Selection; Committee of Selection for Artists of Oregon Exhibition, 1952; Artist Membership; and Art Committee.

A group of lectures will be held "Art of Primitive Peoples, by Theodore Stern, and "Prehistoric Stone Sculpture" by Priscilla Coft.

SAN FRANCISCO MUSEUM OF ART War Memorial Building

TO SAN FRANCISCO Oil, by TOM LEWIS

Collection of the San
Francisco Museum of Art,
GIFT of William Gerstle.

The featured Exhibitions of the month include Artists of Oregon—1952; "Report From New York"—contemporary paintings; and Photographs by Alta Jourdan.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is presenting a number of outstanding exhibitions during April.

EXHIBITS: Contemporary Mexican Art; Two Photography Exhibitions. Paris—an American Photographer's Impressions, and Photographs by Jasper Wood. New Collection Photographs by Alfred Stieglitz; A University Collects—an American Federation of Arts Exhibition; Marcel Breuer—Architect—a Museum of Modern Art Exhibition; and Art Makes Contact.

SPECIAL EVENTS will include the Composers' Forum, April 14; the California String Quartet, April 21; a Poetry Reading by Dylan Thomas, April 16; and a group of lectures on various art subjects each Sunday afternoon, Monday evening and Wednesday evening.

Classes in art include the Sketch Club and Painting Class each Friday evening, and the Children's Class on Saturday mornings.

SECOND ANNUAL TUCSON ART FESTIVAL

The second annual Tucson Festival, featuring a kaleidoscopic panorama of history and culture, Indian and folklore programs, and dramatic musical, and dance presentations is being observed in Tucson, Arizona, during April.

Mingled with the pageantry of a colorful past is an exhibit of arts and crafts created by many of the established artists of today who make Tucson their home.

Among those participating in the Festival are Yaqui Indian tribes, Tucson Symphony and Phoenix Symphony orchestras, Papago Indian tribes, University of Arizona, Tucson Fine Arts Association, Tucson Professional Photographers Association, Denver Art Museum, and a great number of local groups and individuals.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, has scheduled a number of special exhibitions and events for the month of April.

Featured among the Exhibits is a group of Paintings and Drawings by Gene McComas; Paintings

and Sculpture by Barbara Herbert; Pacifica—a display of furniture, textiles and ceramics; and the Fifth Annual of the San Francisco Pottery Association.

Professor Yukio Yashiro will present a lecture, April 2nd, on "Japanese Art."

The spring series of "Painting For Pleasure" and "Exercises In Perception" will start on April 19th and 23rd and continue for twelve weeks. The "Workshop," painting for appreciation, is held on Tuesday and Saturday afternoons, and "Drawing and Painting" for children 4 to 10 is held each Saturday morning. A class in Picture Making, for students 10 to 15 years old, is held each Wednesday, Thursday and Friday afternoon.

CALIFORNIA PALACE OF THE LEGION OF HONOR

The permanent collection of the California Palace of the Legion of Honor, Lincoln Park, San Francisco, has been enriched by the purchase of four important works of art, according to Thomas Carr Howe, Jr., director.

The new acquisitions include "Gabiello and Coco" painted in 1902 by Renoir; "Arabian Scene", a watercolor by Delacroix; "Romantic Landscape," by Alessandro Magnasco; and Byzantine, XI Century, fresco head.

STIEGLITZ COLLECTION OF PHOTOGRAPHS ON DISPLAY

A recently acquired collection of photographs by the American master-photographer, Alfred Stieglitz, is being shown at the San Francisco Museum of Art, War Memorial Building, Civic Center.

The collection consists of 58 prints and 4 gravures. Similar collections are in the National Art Gallery in Washington, D. C., the George Eastman House in Rochester, N. Y., Fisk University and other institutions.

HOLE ART COLLECTION IN NEW GALLERY

Permanent housing for the Willitts J. Hole art collection has been announced by art department officials on the Los Angeles campus of the University of California.

The collection of paintings of 56—European masters—including El Greco, Turner, and Peter Breughel, the elder—will be placed in the new U.C.L.A. Art Building. They have been in the Library.

The art masterpieces were collected over a twenty-five year period by the late Willitts J. Hole, pioneer Los Angeles real estate man, explorer, and patron of the arts.

UNIQUE FEDERAL CONSTRUCTION

"STREET OF RUINS"

BEING BUILT IN MARYLAND

One of the most unusual construction jobs ever to face a building contractor, the first rescue training "street" to be built in the United States, is under way at the Federal Civil Defense Staff College at Olney, Maryland.

Here an entire city street, complete with stores, a theatre, two-story dwellings, apartments and a five-story business structure, is being designed by the firm of McLeod & Farrara, Architects, under direction of the Federal Civil Defense Administration, Rescue Service Division, with construction in charge of Joseph B. Bahen, Construction Company, Inc., of Washington, D. C.

The Olney street will simulate ruins with store fronts blown out, floors of houses partly in basements, girders and beams twisted and contorted at odd angles, and with piles of rubble, dirt and broken concrete cluttering up all access to the buildings.

Yet the buildings are being constructed according to rigid engineering principles of stress, weight and the use of tested materials.

The advance rescue training course to be conducted there will afford realistic, first-hand experience in practical wartime disaster rescue operations. Civil defense rescue techniques are different from peacetime rescue operations which are largely concerned with the problems of resuscitation, saving people from drowning, gas effects and electric shock and with the removal of persons from buildings filled with smoke or on fire. An enormous task confronts the civil defense rescue service because of the lack of actual experienced rescue workers under conditions which will exist following enemy attack.

Designs of the structures were developed from studies made of high explosive bombings in Great Britain and Germany, as well as the effects of the atomic bombings of Nagasaki and Hiroshima.

The rescue "street" includes 1) an outdoor demonstration area for advanced training in the use of rescue tools, 2) two-story and basement wood-frame house, 3) two-story and basement row house, 4) two-story office, store, and theatre building, 5) three-story and basement office and apartment building, and 6) a five-story reinforced concrete building.

The outdoor demonstration area will have sec-

tions of brick walls and steel beam sections for practice in cutting concrete beam and slab sections for training in jacking and lifting; wall sections for shoring practice; debris piles, plaster, metal and wood lath and various types of building furnishings, arranged to provide practice in moving and handling debris.

The two-story and basement wood-frame house is one of the commonest types of dwellings found in the United States, particularly in the industrial areas of the East and Mid-west built between 1900 and 1915.

This set will provide the means for instruction in tunneling in earth and debris, requiring care and skill in removing victims without further injury.

This structure will have a simulated electric service in the basement, with voltage reduced to mildly "shock" the trainee if he is careless or mishandles the equipment.

The two-story and basement row house, is also found in most urban areas in the United States, particularly in cities of over 30,000. This is the familiar semi-detached, four-family flat, the two-story apartment or tenement house built in the period from 1890 to 1920, and generally found in the downtown areas of most older cities.

A great many of the city dwellings in Britain and Germany were of this type but were much older, and the mortar used in the brickwork not as strong as that used in the United States. FCDA experts conclude that these walls under bomb attack would not disintegrate into small bits, but would break up into large sections, with the side walls collapsing, or "pancaking" into horizontal layers, held apart by debris, furniture, etc. As a consequence another type of rescue technique will be required, and this the trainees will learn at Olney.

Water and gas services will be part of the equipment in the basement of this building. Water will pour out of simulated broken mains, flooding portions of the rescue area. Leaks in the gas pipes will saturate other areas, forcing the rescuer to don breathing apparatus and work his way to the asphyxiated victim. A harmless type of gas will be used.

The three-story and basement office and apart-

WAYFARERS CHAPEL — Portuguese Bend, Rancho Palos Verdes, California

CHURCHES

CAN BE DIFFERENT

By ARTHUR W. PRIAULX

Christian man for twenty centuries has held amazingly steadfast to forms of the pointed Gothic arch in his houses of worship. The spire, the stained glass window, the vaulted ceilings of the nave are traditional. Ecclesiastical buildings, like religion's forms and ceremonies, resist change as heretical.

For nearly a decade now, an ever-widening group of ingenious western architects has slowly but surely set about to develop what amounts to a dramatic, modern Gothic style in church construction. Quick to grasp the almost limitless possibilities of a new engineering material—the glue-laminated wooden arch and beam—these men are today doing things with wood, shaped to their

INTERIOR . . . Wayfarers Chapel
Frank Lloyd Wright, F.A.I.A., Architect.

... CHURCHES CAN BE DIFFERENT

imaginative requirements, which has opened up great new vistas in church design.

With these wooden arches and beams, which are literally "shop grown" to exact shape and dimension specified by the designer, architects may have astounding latitudes in design. With these shaped-to-measure arches, they can build a cozy chapel in the pattern of the small English rural church with its oaken beams and hammered wooden arches. Or, they can capture the towering impact of the vaulted cathedral with tapered arches of rare beauty and utility. They can design

The gracious exterior with impressive spire is forerunner of beautiful curved lines and parabolic arches to be found in the interior of the modern Western church structure.

short, sturdy arches to span a tiny nave for a community church or they can let their imagination run rampant and glorious and get man-made wooden beams which will span an area large enough to seat 1000 worshippers and still not need support posts.

Versatility is the word for these factory-shaped timbers. The designer can retain the classical styling in his arches, or he can be completely informal. He can, and generally does, leave the arches and beams exposed. The exposed, solid wooden beam has high fire resistance and is noted for its ability to stay in place and hold its position even when subjected to fire and heat for relatively long periods, for the timbers merely char.

Engineers have been able to retain the strength and beauty of the parallel grains of wood in these man-made arches. The full utilization of wood's natural strength is captured in the lamination of the large beams, made up from one- or two-inch

... CHURCHES CAN BE DIFFERENT

lumber. Curvature and taper are easily accomplished as the beams are built up in large presses and drying of glue line is assured with radio frequency arc driers which set the glue deep in the beam and all along the glue line at the same time.

Where arches will be exposed to weather, special penolic and exterior type glues have been perfected. Manufacturers use either one- or two-inch lumber, the thickness determined by the radius of the curvature required in the finished arch.

Most popular arches being designed by western architects are the variations of the modern Gothic, the Tudor or "boomerang," and the cathedral truss style. Traditional and classical arches can be matched with a faithfulness that is encouraging.

Western architects, in the past two years, have shown an inclination to depart rather daringly from the conventional and traditional ecclesiastical form. It must be admitted the effect is most pleasing and in every instance has been accomplished without any possible affront to man's traditional interpretation of what his house of worship should include.

SAN MARINO COMMUNITY CHURCH

San Marino, California

Allison & Rible, Architects

An outstanding Southern California Community Church group embodying modern exterior architectural design . . . with interesting use of the v-type glued arch in the interior main chapel.

CHURCHES CAN BE DIFFERENT . . .

Probably the most startling of the many new church buildings designed and built along the coast in the past two years, since our last report, and in which the laminated arch is the central theme of the structure, is Architect Frank Lloyd Wright's amazing Wayfarer's Chapel, at Portuguese Bend, California. (See page 12)

Here at Rancho Palos Verdes on a lookout perch or bench high above the Pacific is the church of the sun. It is a glass chapel, held together with ribs of laminated redwood. All the beauty of the outdoors is the varied fare of the worshipper as he listens to his sermon or chants his songs. It is eccentric, it is striking, yet it has a beauty and dignity which belongs to houses of worship of other lands.

It has remained for Portland's Warren Weber to design the most unique church structure built in the northwest in many years. This younger architect threw tradition almost out the window when he designed the Cedar Hills Community Church (Con-

MONTICLAIR METHODIST CHURCH

Oakland, California

David A. Wright, Designer

One of the more dramatic of the new Churches is the Montclair Methodist in Oakland, where David Archibald Wright has conceived something new and striking with its "open face" doorway and side, and wide floor-to-floor arching interior.

HOPE LUTHERN CHURCH

Bozeman, Montana

Oswald Berg, Jr., Architect

A feeling of friendliness has been obtained in this modern Montana Church as the liberal use of windows has stimulated a closeness to the out-of-doors. Simplicity of exterior and interior design contributes to the friendliness of the parishioners.

CHURCHES CAN BE DIFFERENT . . .

gregational) for Portland's rapidly expanding population in the west hills. The church property was on low ground. Funds were limited, as is usual in church jobs. Weber decided he could get needed height in his church and seating capacity by building a structure in a wedge or triangle shape, where walls become roof and roof serves the purpose of walls. Towering 40 feet above the low swale on which it stands, the structure is wedge-like. Straight laminated beams are anchored in the concrete slab and join in a V. They are covered with a

two-inch, tongue-and-groove hemlock over which red cedar shingles have been laid. This is what Weber is pleased to call the contemporary Gothic arch. Large footings were built to prevent the wind from blowing the wedge over. Diagonal tie rods to give added rigidity were used in one section at the rear of the church and have been left exposed. On the east side of the roof-that-is-a-church is a large glass window, six by twenty-seven feet in size which lights up the chancel, but lets in a side light which is not too bright for the worshippers. A clerestory light in the north end, facing the chancel and pulpit gives light to the other end of the remarkable church structure. Saw kerfs have been cut in the hemlock and give excellent acoustical results.

Barrett and Logan and associate Murtaugh, Portland architects, solved a difficult design problem in the St. Clair Catholic Church of Portland by creating laminated arches to support an extra heavy lantern and tower.

Unusual are the four boomerang-type arches which rise up from the four corners of the intersection of the nave and transept. Smaller arches have been used the length of the nave and transept and these four larger arches, styled to match the rest of the church interior, project upward into the lantern well. The lantern, which contains clere-

story lights on all four sides, rests atop the ribs of the arches. A post, joined where the four arches meet, becomes a support for the tower above the lantern which also fits into the roof member.

All arches in this structure have been chamfered to break any stiffness in square edges. The problem was to develop strength without undue increase in size of supporting members. The glue-laminated arches were the perfect solution for they enabled the designers to retain the beauty of the Gothic style found elsewhere in the church.

In the San Marino, California, Community Church, Allison & Rible, Los Angeles architects, have captured a very pleasing effect with a modified form of the Gothic arch. The heavy arches, which have been left exposed with satisfactory results, have been rounded at the peak to break the sharp juncture of the Gothic interior. There is an accentuation of great weight in these arches which matches well the full wall of smaller support arches along the nave. There is definitely a feeling of strength in this interior, a symbolism undoubtedly consciously striven for by the architects.

One of the northwest's most active church designers is Donald W. Edmundson, Portland architect, who numbers more than twenty-five such edifices among his works of the past five years, all built around the glue-laminated arch of wood. Selected for its rare beauty and distinctive variation was the Edmundson-designed Valley Com-

CHURCHES CAN BE DIFFERENT . . .

bolic arch. He calls the glue-laminated arch, a new, modern tool of the architect, whose only limitation is the extent of the designer's own imagination and daring.

Valley Community is the modern version of what Edmundson's predecessors designed for the small parishes of the English countryside. Here he has kept the exposed wooden beams, so much a part of most churches. The purlins have been stained to match the arches, all of which against the white background of the masonry walls and ceilings give a dignity and gracefulness that is soothing and restful. Edmundson defines the glue-

laminated arch as essentially a triangle anchored at two bottom points and at joining center. He likes the wide flexibility of this laminated arch which can be built up into so many shapes and sizes.

Oswald Berg, Jr., an outstanding architect of Bozeman, Montana, has added a refreshing note to his conception of the modern church building. His Hope Lutheran Church, of Bozeman, eliminates the solid confining walls of most churches, gives parishioners a full view of the outdoors with full-length windows along both sides of the nave. White-glazed windows behind the chancel light up that portion of the church structure with a pleas-

The wooden arch members (interior) have been covered giving pleasing and lofty cathedral quality.

*Deceased

... CHURCHES CAN BE DIFFERENT

ing warmth. Berg has departed from the stiffness and sternness of older church design and has achieved with the aid of boomerang-type arches a house of worship which has a welcome-home atmosphere.

Oakland, California's architectural designer, David Archibald Wright, has come up with one of the most remarkable church structures in the very different Montclair Methodist Church of Oakland.

The main nave has been built with parabolic glulam arches thirty-six feet in length. The graceful lines of the parabolic arch gives a roundness and a delightful fullness to the main church room. The solid wooden decking of the roof has been finished with the arches to retain much of the natural grain and beauty of the wood.

It is in the entrance that designer Wright has shown fine imagination. The entire front entrance of the church is glass so that one may stand on the concrete walkway entrance and see the full length of the church interior. A friendly pylon on one side and a low masking wall of brick on the opposite

break any naked effect. The result is charming and friendly.

Portland's Pietro Belluschi, who has recently become dean of Massachusetts Institute of Technology school of architecture, has created many a fine church structure in the Oregon country. Probably one of his most noteworthy is the Zion Lutheran Church which nestles just at the foot of Portland's upward sloping hills.

Simplicity is the keynote of this very distinctive house of worship. Belluschi has combined grace-

CHURCHES CAN BE DIFFERENT . . .

ful, reaching laminated arches with timbered ceilings and brick walls. A feature of the brick walls are the glass brick "windows" placed at odd spaced intervals along both walls of the nave. The glass bricks give a life to the otherwise solid brick wall which is most pleasing and comforting. Belluschi has made excellent use of native woods around the chancel with vertical wood paneling on the sides and across the end. The upsweeping arches give a marked feeling of strength as they blend into the natural wood ceiling and supporting purlins and bracing.

When C. A. Caulkins, Jr., was asked to design the First Presbyterian Church of Santa Rosa, California, he was confronted with the usual problem of economy, getting the most church building for the least money. He said he was never in doubt from the beginning that he would use the laminated arches. The arches, he says, add a great deal to the beauty of the church room as well as giving it a character. By eliminating truss members, rods and the usual metal fittings associated with non-fabricated arches, Caulkins said the general appearance of the church was improved.

The boomerang arches used at Santa Rosa demonstrate still another style of arch which can be built up with the glue-lamination technique. Here

the heel of the arch becomes a part of the wall frame.

The Community Congregational Church of Chula Vista, California, designed by Walter C. See, of San Diego, demonstrates a V-type arch with a parabolic curve. Architect See points out that this style of arch is ideal for the balcony-type nave height as well as the lower roof line. Laminated arches were selected for this church because of their acceptable appearance, See reports.

The Chula Vista Church has several outstanding architectural features. Radiant-convection heating has been provided in the solid cast concrete slab. The nave floor is a slab over a system of metal domes which permits the flow of warm air under the entire slab. Additional convection heating is also provided by ducts from below the slab to warm air registers in the side walls. Fresh air can also be introduced by this system. Cold-cathode indirect lighting has been installed in the nave.

The arches, purlins and two-inch, tongue-and-groove sheathing were left in their natural and original color as much as possible, and only a small quantity of stain was used. The contrast against the plaster is good. The distinctive mood of Christian worship has been faithfully retained in

ONEONTA CONGREGATIONAL CHURCH (See opposite page for details)

the splendid Oneonta Congregational Church of South Pasadena, designed by Marsh, Smith and Powell, of Los Angeles.

The striking beauty of the Gothic arch has been captured to a remarkable degree in this church. The architects used forty-six foot arches which are distinctive for their graceful lines and their depth. Features of the old English church have been achieved here, the combination of plaster walls and timber. Some prefer to call the design of this church American-California, disclaimed as modernistic, but holding strong to the heritage of the past. Actually, the Oneonta church is an exceptional building, combining many new features, such as direct and indirect lighting around the chancel and in the sanctuary. One thing we liked particularly is the ability of the architects to let some of the inner beauty of the building show through. This is true in the treatment of a solid concrete wall where small stained glass windows have been used so effectively they become as beautiful from without as from within.

The late Architect Harry L. Pierce has skillfully

ONEONTA CONGREGATIONAL CHURCH

One of the rarest of the new churches on the West Coast is the lovely Oneonta Congregational Church of South Pasadena. Recognized nationwide, it is a striking symbol of beauty from the exterior and the finished interior is complete.

COMMUNITY CONGREGATIONAL CHURCH Chula Vista, California

Walter C. See, Architect

Following the dignified lines of strength and character of the old English Gothic, the architect has utilized modern materials for interior design construction.

used the Gothic arch in his Gardena, California, Methodist Church, and has chosen to cover the timbered members. The beauty of the lines of the fabricated arches is there, but they have been plastered to achieve an unusual effect. Only a tracery of wood is visible against the ceiling whose stained surface shows to advantage against the white of the plastered walls and ceilings. This is a beautiful church and illustrates the wide variety of stylings being adopted to western church design.

Architect B. H. Anderson, of Pomona, has done some of California's better known church structures. The Riverside Immanuel Lutheran Church is one of his latest and comes close to being a replica of some of the centuries old English churches. Its heavy-timbered ceiling is supported by graceful laminated arches which show up in dark richness against the plaster walls of the nave. Here is a church building with a character and heritage identified in the minds of millions with the Christian religion.

William Woollett, Los Angeles architect, summarizes the feeling of many of his profession as he points out that laminated trusses, properly constructed, eliminate much worry for the designer. He can anticipate extremely heavy roof loads, such as slate shingles, without fear of damage from earthquake or high winds. A feature Woollett comments on is the opportunity to obtain arches and trusses of accurate workmanship which will not strain under uneven loading conditions or eccentric loads.

Several architects took pains to remind us of the wide variety in size, length and shape of arches which can be fabricated with ideal results today. Barrett and Logan called attention to their lovely St. Clair Catholic Church in Portland as an example of how structurally easy it is to blend laminated arches of varying sizes as you progress from the small narthex or sanctuary into the larger nave and transept and finally to the very large, cathedral high arches which support the lantern and tower.

So many churches retain the cruciated or cruciform floor plan that architects are constantly confronted with problems of designing roof sections with grace and form where nave and transept meet. The flexibility of the shop-grown laminated arch has opened up immense possibilities which western designers and architects by the hundreds are adapting to their needs.

A study of hundreds of western churches built within the past two years convinces us that the genius and imagination of the architect and designer are the only limiting factors. Lloyd Wright's breathtaking Wayfarer's Chapel; Warren Weber's extreme but functional Cedar Hills Church; and Wright and Craig's startlingly modern Montclair Methodist Church give us an idea of what great variations are possible in church design without offending tradition, heritage or religious mood.

A Luminous ceiling of egg-crate louverall construction, integrated with acoustical and ventilating treatment, was used to modernize the Bank of America's main Oakland branch. More than half a mile of 8-ft. slimline fluorescent tubing was installed above the louvers.

Illumination ranges 40 to 79 foot-candles.

TREND TO INTEGRATED CEILINGS TOLD AT LIGHTING CONFERENCE

ILLUMINATING ENGINEERING SOCIETY HOLDS FOUR-STATE REGIONAL LIGHTING MEETING IN SAN FRANCISCO

An increasing trend toward integrated ceilings, particularly in new construction, was forecast March 14 before a four-state regional conference of the Illuminating Engineering Society at the Hotel Sir Francis Drake, San Francisco.

H. L. Wollman, research engineer of the Capital Company, told the more than 200 delegates from Arizona, Utah, Nevada and numerous California cities that functional and structural integration of ceilings has several advantages. He pointed out that it not only provides all the services required—lighting, ventilation, air conditioning, insulation, acoustical control—but it also creates a cheerful, comfortable atmosphere. Supporting all the required facilities from a single suspension system affords the possibility of important cost reduction, he said.

The speaker reviewed the various types of "packaged" integrated ceiling units available from manufacturers. When the ceiling is built up from materials commonly available on the market, it is necessary to plan the integration from the beginning and to control costs, he said.

Wollman cited as an example of the latter sort an installation in the main Oakland branch of the Bank of America which was made for the Capital Company under his direction. The bank now is the best lighted of all Bank of America's 526 branches.

It features a louverall ceiling with continuous rows of 8-foot slimline fluorescent lamps mounted above on 14-inch centers. Acoustical material was applied above the lamps. The wells of the former skylights provided space for the installation of ducts for ventilation. Both ventilation and acoustical control are facilitated by the egg-crate louverall ceiling. The whole installation blends harmoniously with the Roman

Frank Hope, chairman of the Civic Design Committee, served as chairman of the March meeting which was devoted to a discussion of City Planning with Anderson Northwick, Stanley Grove, Aubrey Davis, O. W. Campbell, Glenn Rick, Jean DuPaul, Willis H. Miller, and Judge Edgar Luce, all prominent civic leaders in San Diego and Southern California, taking part.

The subjects discussed included Zoning, Archi-

tectural Control and the History of Planning in San Diego.

Jack Lewis was appointed chairman of a committee to prepare an Architectural Exhibit, with accompanying brochure, for display at the San Diego County Fair.

LeBRUN TRAVELING SCHOLARSHIP FOR ARCHITECTS IS ANNOUNCED

The annual nation-wide architectural LeBrun Traveling Scholarship competition, sponsored each year by the New York Chapter of The American Institute of Architects, will again be awarded this year according to J. Bruno Basil, chairman of the Chapter's scholarship committee.

The problem for this year's competition is a Library, with facilities for outdoor reading, informal lectures and small art exhibits suitable for a town of 30,000 population.

Contestants must be either an architect or draftsman between the ages of 23 and 30, a citizen of the United States, and must be nominated by a member of the A.I.A. The winner will receive \$2800 and is required to spend it for a minimum of six months travel in Europe.

earthquakes is faulting, where high mountains meet the sea. The coastal portion of California is drifting north at the rate of two inches a year. Inevitably the strain becomes so great that break-ages occur, and the resulting earthquake may be felt throughout the state."

Damage depends more upon the foundations and construction than on the proximity to the earthquake center, Dr. Byerly said.

John Lyon Reid, A.I.A., architect on San Francisco represented the California Council of Architects at the hearing and Arthur Sauer of Sacramento represented the Structural Engineers Association of California. State Architect Anson Boyd spoke in support of the safety act.

SOUTHERN CALIFORNIA CHAPTER

Colonel Edward S. Shattuck, Attorney and Engineer, addressed the April meeting on the subject "Architectural Law," and Harold Henry, president of the City Council spoke on "Civic Affairs."

Both discussions were of particular interest to members in view of recent legal developments in a number of instances elsewhere in the State wherein architects were involved, and with the possible leveling off of defense spending more thought is being given to civic situations.

SAN DIEGO WOMEN'S ARCHITECTURAL LEAGUE

The San Diego unit of the Women's Architectural League, recently heard an informative and interesting discussion of the use of colors.

Speaker for the occasion was Mrs. Margo Graham, Color Consultant of Hollywood.

Arrangements for the program were in charge of Mrs. Wm. Wilkinson.

CALIFORNIA COUNCIL OF ARCHITECTS

The next meeting of the Council will be held in June with the Pasadena Chapter serving as hosts, and important legislative and governmental reports will be presented by committee chairmen

John J. Gould, President; G. A. Sedgwick, Vice-President; Art B. Smith, Jr., Secretary; Franklin P. Ulrich, Treasurer; Robert P. Moffett, Ass't. Sec.; Wm. K. Cloud, Ass't. Treas.; Directors Robert P. Dalton, John J. Gould, Leslie W. Graham, J. Albert Paquette, John E.

Rinne, Hyman Rosenthal, and G. A. Sedgwick. Sec. Office, 417 Market St., San Francisco.

Structural Engineers Association of Central California

William H. Peterson, President; Walter S. Wassum, Vice-President; O. T. Illich, Sec.-Treas.; Ernest D. Francis, M. A. Ewing, and Arthur A. Sauer, directors. Office O. T. Illich, c/o Div. of Arch., Sacramento.

American Society of C. E. San Francisco Section

Clement T. Wiskocil, President; John S. Longwell, Vice-president; J. G. Wright, Vice-president; H. C. Medbery, Treasurer; R. D. Dewell, Secretary. Secretary's Office, 604 Mission St., San Francisco.

STRUCTURAL ENGINEERS ASSOCIATION SOUTHERN CALIFORNIA

Electric Strain Gages and Their Application was the subject of a talk by Dr. A. C. Ruge, of Ruge-de Forest, Inc. of Cambridge, Massachusetts, at the regular April meeting, held in the Alexandria Hotel, Los Angeles.

Dr. Ruge is the developer of the widely used SR-4 electric strain gage and was formerly with the Massachusetts Institute of Technology. He illustrated his talk with a number of slides.

New members include Harry Bieber, Arthur H. Cook, August John Glaser, Sigmund Levin, J. W. Meaderville, Murray Merrin and Rhodes E. Rule,

Associates; and William McEwen, John Majdick and Alexander W. Ronald, Junior Associates.

Announcement was made that the May meeting scheduled for the 14th would be a joint meeting with the ASCE.

NATIONAL SOCIETY OF PROFESSIONAL ENGINEERS ELECTS NEW OFFICERS

John D. Coleman of Dayton, Ohio, executive of the Frigidaire Division of General Motors Corp., has been elected President of the National Society of Professional Engineers for the ensuing year. He will take office on July 1.

The Society is composed of engineers who have met the requirements for registration in the state in which they reside and has more than 300 Chapters in thirty-eight states.

William D. Williams of Phoenix, Arizona, a sanitary engineer associated with the firm of Headman, Ferguson & Carollo, is vice president of the Western Area, and serves with live other regional vice presidents on the Board.

STRUCTURAL ENGINEERS ASSOCIATION NORTHERN CALIFORNIA

Jean Muller of the Freyssinet Company, New York City, spoke at the April meeting on "Prestressed Concrete" and described the application of prestressed concrete to construction of buildings, bridges, and water front structures in Europe. Educated in Paris, Muller is a designing engineer that came to the United States about a year ago and his comment on the construction industry abroad was very interesting.

New Affiliate members include John B. Harrington, superintendent of construction for the American Trust Company, and Burr H. Randolph, senior structural engineer for Pacific Island Engineers.

Spier, Treasurer; and Rear Admiral C. A. Trexel, CEC, USN (Ret.); Capt. Cushing Phillips, CEC, USN; Capt. H. F. Ransford, CEC, USN; Clyde Bentley; Lt. Col. James D. Strong, CE, USA; and J. G. Wright directors.

Council, spoke at the April meeting on the subject needed in 1960. The U. S. Office of Education reports only 17,000 will come out of the 1954 classes, while the Engineering Manpower Commission makes the more pessimistic prediction that the college output for 1954 will not total 12,400 engineering graduates.

Representing the nine counties bordering on San Francisco Bay, Marsh gave a report on his organizational efforts to stimulate business activities in the area.

A brief ceremony was observed during which presentation of the Colors was made to the Post, and among business considerations was the annual report of the president, which indicated membership in the group was increasing on a steady basis.

SCIENTIFIC RESEARCH SOCIETY ORGANIZES TEXAS CHAPTER

The Scientific Research Society of America opened a branch at the Southwest Research Institute in San Antonio, Texas, recently with Dr. Charles A. Culver, dean of professional development at the Institute being elected president.

Other officers named included Dr. John Loefer, research biologist of the Southwest Foundation for Research and Education, vice-president; Dr. John C. Cook, SwRI physicist, secretary; and Fred Koebel, SwRI mechanical engineer, treasurer.

Membership is based upon demonstrated research ability and published results while its primary purpose is to encourage original investigation in science, pure and applied.

CENTENNIAL OF ENGINEERING INSPIRATION TO YOUTH

One of the main objectives of the Centennial of Engineering to be celebrated in Chicago later this year, will be to inspire more young men and women to take up engineering as a career, according to Lenox R. Lohr, president of the Museum of Science and Industry, former head of the National Broadcasting Company, and president of the Centennial.

Student enrollment has dropped alarmingly below that needed to maintain the pace of American industry, and conservative estimates indicate that the requirements of industry in 1954 will be at least 32,000 new engineering graduates, with 64,000

only 17,000 will come out of the 1954 classes, while the Engineering Manpower Commission makes the more pessimistic prediction that the college output for 1954 will not total 12,400 engineering graduates.

It is pointed out that "if our industrial progress is to continue and we are to maintain our dominant position in world affairs, all constructive steps should be utilized to persuade young men to take a technical education."

The rapidly accelerating pace of the modern industrial world demands more technical knowledge, imagination, and resourcefulness.

Edited by Phil Brown, OTIS ELEVATOR COMPANY.

Edited by Phil Brown, Otis Elevator Company Regular Meeting

The Producers' Council held its monthly informational meeting at the Palace Hotel on Monday, March 17, at which time Panel No. 1 entitled, "Indoor Climate Control", was presented to a large audience of guests and members.

The program was in three parts consisting of automatic control presented by Mr. Ed Dill of the Minneapolis-Honeywell Regulator Company, insulation of structures by Alfred Bennett of the Owens-Corning Fiberglass Corporation, and insulation of the glass area by Mr. Roly MacNichol of the Libbey-Owens-Ford Glass Company.

The discussions dealt with each company's contribution toward the three factors of indoor climate control; namely, temperature, humidity and air motion.

It was pointed out by Ed Dill that the supply of heat to the structure should be subject to automatic control which could be either of the simple "on" and "off" type, or be of a modulating or continuous type of operation. It was pointed out that the floor heating plan arrangement now in use complicates the control due to the time lag involved in heating the large floor mass. With this type of heating and with the additional complications due to direct radiation from the sun's rays, it was Mr. Dill's suggestion that a thermostat and zone control be provided for each heating area of the home which would treat these areas individually and independently to accomplish an even and constant climate throughout the structure.

Mr. Bennett of Owens-Corning-Fiberglass Corporation pointed out the necessity of proper insulation with fibre glass of the walls and ceilings to provide reduced heating expenses and to furnish comfort for the occupants. We were shown that the insulation should provide a moisture barrier on

the warm side of the exterior walls to eliminate condensation within the walls and condensation on the room side. As advice to the architects, Mr. Bennett stressed the point that the insulating material should be specified as vapor-proof and not simply moisture proof when used as a vapor barrier.

As large window areas are now the accepted rule in home and school construction, the insulation of the glass area is of great importance to control heat loss through the glass area, elimination of down drafts from the glass surfaces, and condensation on the windows on the room side, as pointed out by Mr. MacNichol of Libbey-Owens-Ford Glass Company. Mr. MacNichol recommended Thermopane as the best solution and he pointed out that if the direct radiation of the sun is the particular problem in question that it can be more adequately solved by the use of a special type of heat absorbing Thermopane which more adequately controls this radiant energy than does the regular type of Thermopane installation.

Invited Guests

It is currently the practice of the Council to invite guests, two for each member company, to attend the informational meetings. A complete roster of the local architects and engineers is maintained and the selection of guests is made alphabetically and on a rotational basis. The invited guest receives a card as does the Council member who, in turn, checks with the guest to see if he will be able to attend. If the invited guest is unable or does not desire to attend the particular meeting, the member is asked to select another guest of his own choosing.

In the past, the request has been made by a number of architects regarding the possibility of attending some of the informational meetings, even though they did not receive an invitation to be a

(See opposite page)

USE QUALITY PRODUCTS

CONSULT AN ARCHITECT

guest of one of the member companies.

Ways and means are now being considered whereby we can enlarge the field of the attending architects and engineers when informational meetings are held. It is, of course, highly desirable to have as many attending guests as is practically possible, and the Council would appreciate any suggestions from either architects or producers along these lines. While it is our desire to reach as many architects as possible with these informational meetings, our facilities are limited and this must be taken into consideration so that sufficient time is available to prepare the reservations.

STREET OF RUINS

(From page 11)

ment building is typical of the period from 1920-1930, when steel skeleton construction began to replace wall-bearing structures, and structural steel floors and roofs were gaining in favor over wood-joint framing.

Many of the urban area buildings in American cities are of this type. This is equally true in Britain, Germany and Japan, where excellent opportunity for study of bomb damage was afforded. In America, the Texas City explosion in 1948, provided material for the examination of explosion

damage in this type of structure. Further, since the exterior walls in this structure are light, and serve merely as a covering, large quantities of rubble will be present. Floor panels will collapse and partitions and plaster will fill each level with debris.

In the basement, water, gas, electric, and sewer installations will confront the trainee with problems due to breakage of these services.

Another structure going up at Olney is quite familiar to most Americans—the office-store-theatre-type building, two stories high in front, with a high-ceilinged garage or workshop in the rear.

It is typical also of some of our city school buildings, as well as other places of public assembly, such as theatres, movies, meeting halls and bowling alleys. This type of structure is not well-suited to withstand the effects of an atom bomb explosion. The big danger is from disintegration or movement of the walls which would cause a collapse of the roof and floors and entrapment of its occupants.

The addition in the future of a driveway in the rear will provide a typical "back alley" situation, with its own peculiar rescue problems. Simulated fire and smoke hazards make up part of the exercises to be carried out in this structure.

be typical of most large business, institutional and public buildings today. Offices, banks, hospitals and schools are in this category. Columns, beams, floor slabs, roofs and sometimes exterior walls are of reinforced concrete.

This set will pose the problems apt to confront rescue workers in multi-storied structures. The problem of extricating trapped persons becomes complex in this type of structure because of the number of stories through which the rubble falls and accumulates.

Special equipment, such as mobile cranes and booms for lowering casualties will be employed. Special safeguards must be provided for the rescue crews simultaneously at different floor levels.

Similar Japanese reinforced concrete buildings designed to resist earthquake, withstood the atomic blasts reasonably well.

Damage to American buildings from atomic blast will consist mainly of twisted steel columns, dislocation of cross beams and the falling away of the walls between them. The outside frame would probably remain.

INTEGRATED CEILINGS

(From page 25)

classic architecture designed when the bank was built in 1906, and it provides a light intensity of 40 to 70 footcandles over the entire working space and lobby area.

Commenting on Wollman's address, Reuben E. Lagerstrom, a member of the Society, told the conference there are now about 6000 square feet of luminous ceilings using corrugated vinylite plastic in the San Francisco Bay Area. He cited one of these in the new library of the University of California as providing probably the best library illumination in the world today, with 3.8 watts of lighting installed per square foot, giving 120 footcandles of illumination on the working plane.

Banks always have presented a difficult relighting problem because of their high ceilings and ornamentation, Lagerstrom said. Luminous ceilings are an excellent solution. Such ceilings answer an objection of some architects that fluorescent light sources are too bulky. At higher levels of illumination, luminous ceilings cost less than other means of lighting, and they can be adapted to any type of light source that may be developed, he said.

The conference heard a strongly-voiced plea from George J. Taylor, widely-known New York illuminating engineer, for greater attention to brightness engineering in lighting design for offices. The speaker, eastern sales manager of Day-Brite Lighting, Inc., declared:

"Brightness engineering means we must have a thorough understanding of footcandles and foot-lamberts. We must know all about walls and their colors, the floors, the finishes and reflectances of furniture and desk tops, vertical reflectances as well as horizontal, and the reflectances of equipment — typewriters, accounting machines — that may be in the room."

The prospect of numerous architectural applications for a new light source developed from research into the phenomenon of photo-electric luminescence was held forth by William P. Lowell, Jr., manager of commercial engineering of Sylvania Electrical Products, Inc., Salem, Mass.

Lowell exhibited glass plates which were made to glow in several colors. Although still in the developmental stage, the process has been used to achieve light intensities which are adequate for many practical applications, he said. He suggested luminous stair risers, luminous side walls of escalators, lighted cocktail table tops, and decorative applications in homes. The sheets exhibited were 12 inches square but they could be made in any size desired.

Electroluminescence is produced by dispersing a film of a phosphor in a dielectric and placing it between two conducting plates, one of which is light transmitting, Lowell explained. The materials

Notes on Quality LIGHTING:

Here in the West the installation assuring maximum lighting efficiency with minimum service and maintenance is, by every standard of comparison, SMOOT-HOLMAN. The hallmark of quality in better buildings is the presence of SMOOT-HOLMAN equipment.

The New D-P Seal-Lux, pictured above, is a vapor-light fluorescent luminaire built for high efficiency and rugged service life under the most exacting conditions.

Glued Laminated CATHEDRAL ARCHES

*... A functional
application of a
beautiful material*

The picture above tells its own story of the beauty of the glued laminated cathedral arches of Timber Structures, Inc. It shows, too, the functional construction which not only provides the architectural motif, but also gives the congregation a better and more beautiful church at a substantial saving in cost.

Roof load is carried by the arches, so that walls need only to support themselves. The resulting construction made material and labor savings of \$60,000 over the contractor's estimate for a building of equal size and capacity previously designed for conventional construction.

A new booklet, "Enduringly Beautiful Churches", gives detailed information about glued laminated members, and a copy is yours for the asking.

luminesce directly under the influence of the electric field, which, however, must constantly be fluctuating in intensity. This apparently is a direct transformation of electric energy into light, and it opens up a new field of study with intriguing possibilities, both theoretical and practical, Lowell said.

The conference was opened by Samuel G. Hibben of New York, national president of the Illuminating Engineering Society and director of applied lighting of the Westinghouse lamp division at Bloomfield, New Jersey. Emphasizing the need of continuous improvement of lighting, Hibben said that more than 20 per cent of the best young manhood of America cannot see well enough to be qualified for full military service. The Society recognizes its responsibility for the preservation of human vision, he said.

"A Salute to Lighting Progress," a dramatic demonstration of the newest lighting equipment for every field of use, was presented by Alston Rodgers, illuminating engineer of the General Electric Company, Nela Park, Cleveland, Ohio. Americans are using approximately 60 per cent more electric light today than they used only five years ago, Rodgers said.

Willard C. Brown, manager of engineering at the General Electric Nela Park laboratories, told the conference a revolution in industrial lighting is under way. Since 1919 there has been no appreciable change in industrial lighting except the substitution of bare fluorescent lamps for bare incandescent lamps in the most usual installations. Now, however, several fixture manufacturers are designing fixtures for industrial use which will give workers protection for their eyes comparable to the protection afforded office workers.

Another speaker was Manno N. Harder of the California State Division of Architecture, who described the lighting of the new Capitol Annex building in Sacramento.

The conference was sponsored by the Northern California Section of the Society under the general chairmanship of H. H. Robison, supervisor of sales in the East Bay Division office of Public Gas and Electric Company in Oakland.

A.I.A. ACTIVITIES

(From page 27)

and members who have already pointed out the need for a strong cooperative program to meet encroachment by governmental bureaus on the private practice of architecture.

Plans for the 1952 annual convention in Yosemite on October 8-9-10 are being made and tentative schedule of program and events will soon be announced. In the meantime, William Koblik, council president, is urging that all architects make their plans now to be sure and attend.

NORTHERN CALIFORNIA CHAPTER

The Northern California Chapter Bulletin made its initial appearance during the past month and apparently was well received. Enlarged in physical size and scope of content the first issue was devoted to a special listing of a number of "allied interests," information which the new Bulletin editor F. Bourne Hayne felt would be of special interest to architects.

ARCHITECTS INVITED TO SUBMIT DESIGNS

Architects from all parts of the nation are being invited to submit designs for hanging in the "Hall of Church Design" at the International Churchmans Exposition scheduled for May 19-24 at Chicago's International Amphitheatre.

The Chicago Chapter A.I.A. is cooperating in the exhibit and securing architectural speakers for the convention which will be attended by an estimated thirty thousand persons.

Entry blanks for the exhibits may be obtained from the International Churchmans Exposition office 19 S. LaSalle Street, Chicago 3, Illinois.

SAN FRANCISCO CHAPTER WOMEN'S ARCHITECTURAL LEAGUE

Coinciding with the appearance of spring the San Francisco Chapter of the Women's Architectural League, in collaboration with the San Francisco Artists' Equity Association, recently conducted a tour of selected homes and artists' studios of the Bay Area.

Five selected homes were included, and four studio groups were chosen. The complete tour was conducted on two separate days.

Mrs. Wendell R. Spackman served as Tour Chairman; Mrs. Norman K. Blanchard was Ticket Chairman; and Mrs. Donald E. Olson was in charge of publicity.

ARCHITECTS AND ENGINEERS HOST SAN FRANCISCO OFFICIALS

The Northern California Chapter of the A.I.A., and the Consulting Engineers Association of California, met with presidents and managers of various San Francisco City commissions the latter part of March at an informal dinner at the Palace Hotel.

Thomas A. Brooks, Chief Administrative Officer of the City and County of San Francisco, discussed some of the construction projects now in progress and under future consideration.

Since World War II approximately 250 million dollars worth of construction has been performed for the city with the majority of structures being designed by local architects. Several million dollars more will be spent in the near future in the construction of additional City and County buildings, it was pointed out by Brooks.

BOOK REVIEWS PAMPHLETS AND CATALOGUES

EARLY AMERICAN ARCHITECTURE—From the First Colonial Settlements to the National Period. By Hugh Morrison. Oxford University Press, New York City. Price \$12.50.

A scholarly, readable study of architecture in the colonies from St. Augustine in 1565 to San Francisco in 1848, it covers colonial architecture in all its manifestations.

The author's primary emphasis is on the many architectural styles, and the various conditions that produced them. Each style is presented, both in text and illustrations, by a selection of typical examples, by monuments of particular historical importance, and especially by buildings that are dated with reasonable certainty. The remarkable collection of nearly five-hundred photographs and drawings of exteriors, plans, interiors, and details, with the substantial framework of facts, terms, and dates, makes the book a clearly organized and extensive work of interest to the layman as well as to the architect, student, and art historian.

THE RISE OF THE SKYSCRAPER. By Carl W. Condit. The University of Chicago Press, 5750 Ellis Ave., Chicago 37, Ill. Price \$5.00.

Following the great fire of 1871, Chicago became the leader in architectural renaissance which was to have its effect on cities throughout the world.

The author is Assistant Professor in Humanities at the Technical Institute, Northwestern University, and in this book has endeavored to present and evaluate the contribution of the "Chicago School" of architecture, not only in the modern techniques, but also in the creation of a new building form as well.

Such historic achievements as the Home Insurance Building, The Rookery, the Monadnock, the Auditorium, the Ashland Block, the Second Leiter, and the Gage, Tacoma, and Reliance buildings are described and included with inauguration of new design in architecture is the new use of building materials.

The author's research has brought to light many rare photographs and prints of Chicago's buildings many of which are no longer standing. The book is of great interest to anyone interested in architecture, design, or progress in building material uses.

HEATING VENTILATING AIR CONDITIONING GUIDE—1952. American Society of Heating and Ventilating Engineers, 62 Worth Street, New York 13. Price \$7.50.

An instrument of service prepared for the profession and containing extensive sections devoted to 1) Reference material on the design and specification of heating, ventilating and air conditioning, 2) Manufacturers' Catalog data section containing essential and reliable information concerning modern equipment.

The book contains 1496 pages of text, charts, maps, designs, and other illustrated material.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

363. INSULATED CAVITY WALL. A new brochure covering the development of the insulated cavity wall has been published by the Owens-Corning Fibre Glass Corporation. Pouring-type Fiberglass Cavity Wall insulation for use in the SCR (Structural Clay Research) Insulated Cavity Wall has been developed by Owens-Illinois Fiberglass Corporation. After extensive studies and tests conducted by the Structural Clay Products Research Foundation, Fiberglass pouring-type Cavity Wall insulation was found to be the only effective insulation in this type of economical cavity wall construction. The new-type Fiberglass insulation is used in the SCR Insulated Cavity Wall because it was found to have good thermal resistance, a low enough density to support its own weight without settling, and for its ability to resist moisture. 4 pages illus., 9/51.

364. MULSOMATIC FLOORING. The advantages of resilient asphalt mastic floors are discussed in Mulsomatic Flooring, an illustrated publication recently released by the Tremco Manufacturing Company. Mastic flooring provides warmth resilience

for employee comfort; is water, fire, acid and vermin resistant and wears for long periods at exceptionally low cost, according to Tremco. Although Mulsomatic is capable of withstanding heavy traffic over a considerable period of time, it is actually a lightweight topping that does not burden the underpinning, according to manufacturers. It is widely used as an inexpensive underlayment for asphalt tile and other resilient tile. A.I.A. 23-D, four pages illus., 10/51.

365. METAL PROTECTION & PAINT BONDING. A catalog published by the American Chemical Paint Company covers the processes they have developed to protect metals against corrosion. A complete index of the chemicals produced as to type and their applications to the commonly used industrial metals is shown. The purpose of the chemicals, characteristics, advantages and effectiveness are briefly described throughout the catalog. A.I.A. 15-E, eight pages illus., 9/51.

366. MASONITE HARDBOARDS. This catalog has been released by the Masonite Corporation as a guide for the application and finishing of Masonite Hardboards as they are used in building construction and remodeling. All of the more general or common applications have been covered. Some of the uses shown are for siding, underside of eaves, porch ceilings, shutters, cabinets, interiors, built-in furniture, floors, store fronts, displays, fair buildings, work surfaces, interior walls, wainscots, doors, portable partitioning. The divisions of the catalog also cover product description, physical properties, working, bending, fastening, cabinet details finishing, joint treatments, underlayment, exterior siding, conditioning, concrete form presdwood and architectural specifications. A.I.A. 23-L, twenty-four pages, 11/51.

367. RECTANGULAR STEEL BRIDGE FLOORING. Kerlow Steel Flooring Co. announces that its latest, up-to-the-minute, comprehensive folder on new IQ-35 Steel Bridge Flooring is just off the press and is available to bridge engineers and to others who wish information about this newest and most recent improvement in steel bridge flooring. This latest development by Kerlow, whether laid longitudinally or transversely on a bridge, will carry H20 loading (highway load of 20 tons) on a 15" circle (on an area this small to point up strength of flooring) up to a span of 48" and weighs approximately 19 lbs., (weight per square foot of grating). A special red paint, with which the grating is finished, was developed for use on IQ-35 by one of the largest paint companies in the United States. IQ-35, four pages illus., 10/51.

368. STAINLESS STEEL IN ARCHITECTURE. In answer to numerous requests from architects for further construction applications of stainless steel, a new booklet, "How and Where to Specify Stainless Steel in Architecture," has just been published by the Committee of Stainless Steel Producers of American Iron and Steel Institute. A companion book to the Committee's previous publication, "Architectural Uses of the Stainless Steels," released a year ago, the new booklet lists almost 300 different construction applications of stainless, ranging from air conditioning ducts to show windows. It also provides information on some 20 different groups of fabricated stainless products ready for installation, as well as data on the most usual types of stainless for architecture, and details on stainless forms and finishes available from steel mills. In addition to these technical facts on stainless, the new publication also includes for the architect and construction engineer a specification guide. This section discusses in detail recommendations for good practice in handling stainless by metal contractors. A.I.A. 15-H-1, twenty pages illus., 12/51.

369. REMOTAIRE ROOM CONDITIONER. A new remote type room air conditioner for multiple installation that provides both summer cooling and winter heating is described in a catalog by American Radiator & Standard Sanitary Corporation. Called the Remotaire, it is designed for installation in office buildings, apartment houses, hotels, motels, hospitals and residences. Connected to centrally located water heating and cooling plants, this new unit offers individual control of temperature in every room without affecting adjoining spaces. A.I.A. 30-F-1-2, twenty-four pages illus., 2/52.

ANNUAL EDUCATION LECTURES PRESENTED BY THE PUGET SOUND CHAPTER OF THE AMERICAN SOCIETY FOR METALS

Reported by L. F. Franz, Boeing Airplane Company

The Puget Sound Chapter of the American Society for Metals presented its second session of the Annual Educational Lectures recently. The lectures were presented in the form of an open panel discussion on "Surface Treatments and Finishes for Metals" with Professor J. A. Finley, University of Washington as Moderator.

The first speaker, C. B. Holder of Eagle Metals Company, spoke on "Copper and Nickel Base Alloys." Holder gave a short history of the production and development of nickel and the problems encountered by the early smelters who thought the ore was copper. Holder also discussed the properties of copper and nickel alloys, corrosion resistance being the most important, and the effect of various surface finishes on these properties. These metals are also used as coatings and cladding on other materials.

The second speaker, Dr. Earl T. Hayes, Chief, Physical Metallurgical Section, Bureau of Mines, Albany, Oregon, discussed "Surface Treatments and Finishes for Titanium and Zirconium and Their Alloys." Dr. Hayes first discussed the method of producing and purifying these metals and then discussed several of the problems involved in machining, grinding, drilling, cleaning, and welding these metals and their alloys. They have excellent corrosion resistance due to a very thin, colorless tight oxide film. Other materials cannot be plated onto titanium and zirconium because of this oxide film and titanium cannot be plated onto other metals. These metals can be welded by heliarc, butt welding, and spot and seam welding methods but cannot be welded by other standard welding methods.

REPRESENT J. R. SMITH MFG. CO.

The Jay R. Smith Mfg. Co. of Union, New Jersey, has announced the appointment of the Kiener Company, Los Angeles, as their West Coast representative.

Appointment of the Kiener Company makes representation of the J. R. Smith line of Chair Carriers, Drains, Grease Interceptors, Roof Couplings, Frost Proof Wall Hydrants, Deck Plugs, Slop Sink Accessories, and Floor Level Cleanouts national in scope.

ARCHITECTURAL PARTNERSHIP IS ANNOUNCED

Announcement has been made of the formation of the new architectural partnership of Charles E. Butner, A.I.A., Wallace J. Holm, A.I.A., and John

(See page 43)

ARCHITECT AND ENGINEER

ESTIMATOR'S GUIDE

BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight charge, at least, must be added in figuring country work.

BONDS—Performance or Performance plus Labor and Material Bond(s), \$10 per \$1000 on contract prices. Labor & Material Bond(s) only, \$5.00 per \$1000 on contract price.

BRICKWORK—MASONRY—

Common Brick—Per 1 M laid—\$100.00 up (according to class of work).
Face Brick—Per 1 M laid—\$200.00 up (according to class of work).
Brick Steps—\$3.00 and up.
Common Brick Veneer on Frame Bldgs.—Approx. \$1.20 and up (according to class of work).
Face Brick Veneer on Frame Bldgs.—Approx. \$2.00 and up (according to class of work).
Common Brick—\$38.00 per M—truckload lots, delivered.
Face Brick—\$81.00 per M—truckload lots, delivered.

Gleazed Structural Units—
Clear Gleazed—
2 x 6 x 12 Furring \$1.60 per sq. ft.
4 x 6 x 12 Partition 1.90 per sq. ft.
4 x 6 x 12 Double Faced
Partition 2.25 per sq. ft.
For colored glaze add .30 per sq. ft.
Mantel Fire Brick—\$105.00 per M—F.O.B. Pittsburgh.

Face Brick—Per M—\$111.00 to \$147.00.
Carriage—Approx. \$10.00 per M.
Paving—\$75.00.

Building Tile—
6 5/8" x 12-inches, per M \$139.50
6 5/8" x 12-inches, per M 105.00
6 5/8" x 12-inches, per M 84.00

Hollow Tile—
12 1/2" x 24-inches, per M \$146.75
12 1/2" x 24-inches, per M 156.85
12 1/2" x 24-inches, per M 177.10
12 1/2" x 24-inches, per M 235.30
F.O.B. Plant

BUILDING PAPER & FELTS

1 ply per 1000 ft. roll \$5.30
2 ply per 1000 ft. roll 7.80
3 ply per 1000 ft. roll 9.70
Brownstock, Standard 500 ft. roll 6.85
Sisalcraft, reinforced, 36 in. by 500 ft. roll 7.00

Sheathing Papers—
Asphalt sheathing, 15-lb. roll \$2.00
30-lb. roll 2.79
Dampcourse, 216-ft. roll 2.95
Blue Plateboard, 60-lb. roll 5.10

Felt Papers—
Deadening felt, 3/4-lb., 50-ft. roll \$3.23
Deadening felt, 1-lb. 3.79
Asphalt roofing, 15-lb. 2.00
Asphalt roofing, 30-lb. 2.79

Roofing Papers—
Asphalt Flg., 15-lb. \$2.09
Standard Grade, 108-ft. roll, Light 1.87
Smooth Surface, Medium 2.18
Heavy 2.56
M. S. Extra Heavy 2.76

BUILDING HARDWARE—

Sash cord com. No. 7 \$2.65 per 100 ft.
Sash cord com. No. 8 3.80 per 100 ft.
Sash cord spot No. 7 3.45 per 100 ft.
Sash cord spot No. 8 3.35 per 100 ft.
Sash weights, cast iron, \$100.00 ton \$3.75
1-lb. lots, per 100 lbs. \$4.75
Nails, per keg, base \$11.80
6-in. spikes 11.20
Rim Knob lock sets 1.80
Butts, dull brass plated on steel, 3/4 x 3/2 76

CONCRETE AGGREGATES—

The following prices net to Contractors unless otherwise shown. Carload lots only.

	Bunker per ton	Del'd per ton
Gravel, all sizes	\$2.44	\$2.90
Top Sand	2.38	3.13
Concrete Mix	2.38	3.06
Crushed Rock, 1/4" to 3/4"	2.38	2.90
Crushed Rock, 3/4" to 1 1/2"	2.38	2.90
Roofing Gravel	2.81	3.00
River Sand	2.50	3.00
Sand—		
Lapis (Nos. 2 & 4)	3.56	3.94
Olympia (Nos. 1 & 2)	3.56	3.88

Common (all brands, paper sacks), carload lots, \$3.55 per bbl. F.O.B.; delivered \$3.60.
Per Sack, small quantity (paper) \$1.65
Carload lots, in bulk per bbl 1.79
Cash discount on carload lots, 10c a bbl., 10%
Prox., less than carload lots \$4.00 per bbl. F.O.B. warehouse or delivered.
Cash discount 2% on L.C.I.
Trinity White { 1 to 100 sacks, \$3.13 sack
warehouse or del.; \$7.56
Medusa White { bbl. carload lots.

CONCRETE READY-MIX—

1-2-4 mix, to 10 yards* \$12.00
10 to 100* yards 11.00
100 to 500* yards 10.50
Over 500 yards 10.30
* Delivered to site.

CONCRETE BLOCKS—

	Hay-dite	Ba-sell
48x16-inches, each	\$1.17	\$1.18
68x16-inches, each	.22	.225
88x16-inches, each	.26	.26
128x16-inches, each	.34	.39
128x24-inches, each		.60

Haydite Aggregates—
3/4-inch to 3/8-inch, per cu. yd. \$7.25
3/8-inch to 3/4-inch, per cu. yd. 7.25
No. 8 to 4-inch, per cu. yd. 7.25

DAMP-PROOFING and Waterproofing—

Two-coat work, \$9.00 per square.
Membrane waterproofing—4 layers of saturated felt, \$10.00 per square.
Hot coating work, \$5.00 per square.
Medusa Waterproofing, \$3.50 per lb. San Francisco Warehouse.

Tricalco concrete waterproofing. 60c a cubic yd. and up.

**ELECTRIC WIRING—\$15 to \$20 per outlet for conduit work (including switches).
Knob and tube average \$6.00 per outlet.**

ELEVATORS—

Prices vary according to capacity, speed and type. Consult elevator companies.
Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about \$7,500.00.

EXCAVATION—

Sand, \$1.00; clay or shale, \$1.50 per yard.
Trucks, \$30 to \$45 per day.
Above figures are an average without water. Steam shovel work in large quantities, less; hand material, such as rock, will run considerably more.

FIRE ESCAPES—

Ten-foot galvanized iron balcony, with stairs, \$250 installed on new buildings; \$300 on old buildings.

FLOORS—

Asphalt Tile, 1/8 in. gauge 18c to 35c per sq. ft.

Composition Floors, such as Magnesite, 40c-\$1.25 per sq. ft.

Linoleum, standard gauge, sq. yd. \$2.75

Mastipave—\$1.50 per sq. yd.

Battleship Linoleum—1/8"—\$3.00 sq. yd.

Terazzo Floors—\$1.50 per sq. ft.

Terazzo Steps—\$2.50 per lin. ft.

Mastic Wear Coat—according to type—
20c to 35c.

Hardwood Flooring—

Oak Flooring—T & G—Unfin. \$12.24 1/2 2 3/4 4 5 6

(From page 38)

H. Waterman into the firm of Butner, Holm & Waterman.

Offices of the new firm are located at 1112 Pajaro Street, Salinas, California. They will engage in the general practice of architecture.

ARCHITECTURAL FIRM OPENS SEATTLE OFFICE

Gilbert H. Mandeville, Seattle, has been appointed manager of the new Leo A. Daly Company, Architects & Engineers, offices recently opened in the Securities Building in Seattle. He formerly served in a civilian capacity as Chief Engineer in charge of design for a Navy Engineering Office in Seattle.

Activities of the Daly Company embrace all building fields from industrial, commercial, churches, schools, hospitals, and other types of institutional buildings to heavy engineering projects and radio installations. Headquarters of the firm are in Omaha, Nebraska.

NINE BUILDING PROJECTS FOR U. C. CAMPUSES

Nine University of California building projects, two at Berkeley, two at Davis, and five at Riverside, have been approved by the Federal Office of Education, assuring issuance of construction

permits and allocation of critical materials.

Approval of the five Riverside projects, which it is expected will go out for bids soon, assures rapid development of the new College of Letters and Science which will cost in excess of \$4,855,000.

REMODEL NEWSPAPER BUILDING

The Stockton Daily Record is spending \$210,000 for the remodel and addition of facilities to their newspaper publishing plant.

Clarence W. Mayhew of San Francisco is the architect.

CLASSIFIED ADVERTISING

Do YOU want to hire, buy, sell, rent, find, lose, and otherwise transact business with others in the Construction Industry? If so, your best bet is a CLASSIFIED ad in ARCHITECT & ENGINEER magazine.

SELL that used equipment at a good price; secure competent employees; buy good used equipment; obtain information on wanted materials, etc.

Rates are low 20 cents per word—cash with order—minimum 3 lines. "Position Wanted" ads are half-rate. Forms close 20th of month preceding date of publication.

How to plan telephone facilities for best year-around living . . .

Preferred locations for telephones often vary with seasons—for example, you may want to plan for a portable telephone outlet on the terrace in summer. So home owners find extra convenience in having telephones where and when they need them. Flexibility is assured by thoughtful builders who provide for additional outlets in their blueprints.

Home owners appreciate built-in conduit and outlets and the cost of installing them during building is small. These extra facilities make it easy to add telephones later, without marring the beauty of interiors through exposed wiring. For free help in planning, call your local Pacific Telephone office and ask for "Architects and Builders Service."

Put built-in telephone facilities in your plans

Pacific Telephone

IN THE NEWS

FACTORY SITE PURCHASED

The Screw Conveyor Corporation of Hammond, Indiana, has acquired a new site in the Posetta Industrial Tract near the city of Santa Clara.

According to Russell B. Maas, president of the company, a new factory will be constructed on the property in the immediate future.

NEW HOSPITAL FOR EUREKA

Architect Frank T. Georgeson, San Francisco, has completed drawings for the construction of a new 75-bed hospital at Eureka, California.

Constructed for the Sisters of St. Joseph, Orange, California, the new hospital is to be a three story building with basement and is estimated to cost \$1,250,000.

LOS ANGELES FIRM GRANTED FRANCHISE

The firm o McClure & Erickson Corp., Los Angeles, has been granted a franchise to manufacture Permalite products, according to a recent announcement by Edward A. Harris, operation manager of the Perlite Division, Great Lakes Carbon Corp., Los Angeles.

Installation of furnaces and other equipment is being completed and finished products will soon be available, for distribution in the Southern California areas.

ARCHITECT SELECTED

The architectural firm of Mayo & Johnson, Stockton, have been commissioned by the Lodi (California) Elementary School District to draft plans for a three classroom addition to the Meedham Elementary School in Lodi.

The addition will be of frame and stucco construction.

LOW INCOME HOUSING

The Housing Authority for the City of Richmond, California, have received plans and specifications for the construction of a 300 unit Low Income Housing Project, and contemplate the start of construction immediately.

Architect Donald L. Hardison, Oakland, was commissioned to design the project which will cost approximately \$2,000,000.

SCHOOL BONDS VOTED

The Anoly Union High School District of Sebastopol (California) has chosen Architect J. Clarence Feliciano of Santa Rosa, to draft plans and specifications for the construction of an addition to the Sebastopol High School.

Some \$990,000 has been made available for the project by passage of a bond election.

ARCHITECTS HOLD OPEN HOUSE

David H. Horn, A.I.A., and Marshall D. Mortland, A.I.A., associate architects of Fresno (California), recently held an open house in conjunction with the opening of their new offices at 1256 Fulton Street in Fresno.

A special exhibit entitled "Fine Arts Gallery" was shown which emphasized edu-

cational and public buildings, residences, and architectural and allied arts.

The exhibit remained open to public inspection for four days following observation of the "open house" festivities.

DESIGNER ADDRESSES LOS ANGELES ART CLASS

William Mitchell, director of design for the Harley Earl Corp., of Detroit, industrial designers, was the principal speaker at the recent graduating class of the Los Angeles Art Center School.

Speaking to more than 300 students, Mitchell sketched a picture of unlimited opportunities prevailing in the field of industrial design, illustration and fine arts.

"The role of a designer is one of constantly increasing importance to industry," Mitchell declared, "and the opportunity for achievement for those with design talents appears to be greater than those afforded by almost any other skilled profession."

Mitchell further pointed out that graduates of such art schools are dispersed throughout leading industries throughout the nation.

GENERAL CONTRACTORS DISSENT FROM WSB POLICY

The Associated General Contractors of America have registered public disapproval of the recent Wage Stabilization Board approved policy governing health and welfare regulations for the construction industry.

Contractor officials claim any policy by the federal government which offers welfare and health payments above allowable wage increases tends to destroy local collective bargaining, and to force upon the industry in all areas unknown welfare plans regardless of the burdens or impracticabilities encountered.

PASADENA PLANT ENLARGES CAPACITY

Construction of a 5,000 sq. ft. addition to the Associated Mfg. Co. plant at Pasadena, California has been announced by Harry Naiman, production manager and co-owner of the plant.

Total area of the plant will be 27,000 sq. ft. with completion of the addition.

ENGINEER JOINS PHOENIX FIRM

Arthur H. Beard, Jr., has resigned as district engineer of the Pima County (Arizona) Sanitary District No. 1, to become associated with Headman, Ferguson & Carollo, Phoenix consulting engineers.

YOUTH AUTHORITY RECEPTION CENTER

Architect Claud Beelman of Los Angeles has completed drawings for the construction of a new California Youth Authority Reception Center to be built near Sacramento.

The project will comprise thirteen buildings and will cost an estimated \$2,500,000.

FIRST WEST COAST MBA CONFERENCE

For the first time in its educational program, the Mortgage Bankers Association of America will sponsor a mortgage banking seminar on the West Coast with a meeting at Stanford University, August 18-22. Aubrey M. Costa, Association president, has announced.

The seminar will take the student through all the operations and procedures in the mortgage banking field, including the various lending and appraising processes.

California committees in charge of ar-

rangements will be headed by Willis R. Bryant, assistant vice president American Trust Company, San Francisco, and Dr. J. Hugh Jackson, dean of the Graduate School of Business Administration at Stanford University.

ELECTRONIC FIRM IN NEW PLANT

The West Coast Electronics Co., Los Angeles, is constructing a new building for immediate occupancy.

The two-story, reinforced concrete structure has been designed by Robert H. Gwynn, structural engineer.

NEW PLANT FOR RICHMOND

The Standard Oil Company of California has announced plans for the construction of a new Synthetic Phenol Plant at Richmond.

Cost of the new plant will exceed \$4,000,000 according to company officials.

NAMED DIRECTOR OF RESEARCH INSTITUTE

Dr. Judson Swearingen, nationally known for his work in uranium plant construction during the war, has been named Director of Petroleum Technology for Southwest Research Institute, San Antonio, Texas, according to a recent announcement by Dr. Harold Vengborg, institute president.

Both a chemical and mechanical engineer, he has had experience in sanitary engineering, linnage oxygen units, evaluation of processes, development programs in the fields of petrochemicals, special cements for oil well purposes, and adaptation of processes and equipment to conditions in foreign countries.

ARIZONA GENERAL CONTRACTORS MEET

At the recent Annual meeting of the Arizona Chapter of the Associated General Contractors of America, R. M. Makemson of Wallace & Wallace, contractors, Phoenix, was elected president; W. E. Naumann, M. M. Sundt Construction Co., Tucson, vice-president; E. O. Earl of the San Xavier Rock & Sand Company, Tucson, was re-elected director for a three year term, and R. W. Markam, Phoenix-Tempe Stone Co., and W. J. Henson were named directors.

ARCHITECT OPENS NEW OFFICES

William Corlett, A.I.A., and Peter H. Skerf, architect associates, recently announced the opening of offices at 347 Clay Street, San Francisco, for the general practice of Architecture.

BUILDING CONCERN IN NEW QUARTERS

The J. A. McNeil Company, Inc., general contractors, have moved into their new building on West Mission Road in Alhambra. The structure is of reinforced concrete and concrete masonry and contains 6000 sq. ft. with executive and administrative offices and conference room.

McNeil, past president of the Southern California Chapter, Associated General Contractors of America, is a member of the California State License Board.

NEW VENTURA HIGH SCHOOL

The architectural firm of Daniel, Mann, Johnson & Mendenhall of Los Angeles, have been named by the Ventura Union High School, board of trustees, to design a new Anacapa Junior High School to be built in Ventura at a cost of \$1,300,000.

Thinking of Building?

From our cost records and experience, an advance estimate may be made from decidedly general information. Based on our knowledge of labor and material costs, gained on current jobs, such an estimate may be helpful in determining your construction program.

NATIONAL BUREAU OF STANDARDS NEW PLANT

Plans for new laboratories especially designed for advanced research in the field of electronics and radio have been prepared for the National Board of Standards by Pereira and Luckman and J. E. Stanton, Los Angeles, architects and engineers, with Robert W. Ditzgen of Boulder, associate architect.

A Congressional appropriation of \$4,955,000 has been allocated for the new facility which is to be located at Boulder, Colorado. In addition to laboratories, the unit will cover 191,611 sq. ft.

SPRING MEETING SET FOR UNIVERSITY OF ARIZONA

The Arizona Section of the American Society of Civil Engineers will hold their spring meeting in the new Student Memorial Union Building on the University of Arizona campus on April 26th.

Scheduled for the meeting is a discussion of structural features of the building, irrigation development along the Colorado River, and three student papers.

RICHMOND VOTES HIGH SCHOOL BONDS

Voters of the Richmond Union High School District recently approved a school bond issue of \$7,000,000 for the construction of a new Junior High School and a new Senior High School.

The two new high schools are to be constructed in the city of Richmond.

At the same time another project of \$5,000,000 for construction of a new Elementary School and additions to the present elementary schools was approved by the voters and school bonds will be issued.

ARCHITECT HONORED

Pietro Belluschi, dean of the School of Architecture and Planning at Cambridge, Mass., and prominent Portland, Oregon, architect, has been chosen one of the outstanding, authoritative contributors to the American Publishers Encyclopedia Year Book for 1951.

NAMED PRESIDENT NEW ORGANIZATION

Warren Gram, Pasadena, has been elected president of the newly organized California Shake and Shingle Association.

Other officers named include Hugh Mason, South Pasadena, vice-president; and Will Freeny of Los Angeles, secretary-treasurer.

ARCHITECTURAL SCALE MODEL FIRM ENLARGES

Stuart D. King, formerly of the Cowlesville Mfg. Co., has joined with Harry C. Kline Associates of Buffalo, New York.

The firm specializes in the manufacture of architectural scale models.

LOW BIDDER ON ALASKA PROJECT

J. B. Warrack of Seattle was low bidder on construction of a cold storage building for the Alaska Defense at Elmendorf Air Force Base.

The bid was \$177,000.

CUPID HITTING JACK POT

Marriage licenses issued thus far this year in cities of 100,000 population, or more, are 35% more than last year.

NEW PRIVATE HOMES

Barring unforeseen factors which would alter the present trend, it is predicted that more than 800,000 new private homes will be built throughout the nation this year, representing a slight decline over both 1950 and 1951.

Shifting in types of construction and variations in the defense program as relates to use of metals and materials and points of development, will be the major factors determining the location and extent of residential construction.

The West Coast is looked upon as a favorable area. Many large manufacturing concerns are looking to the West for expanded activities and in a number of instances are selecting new plant locations that automatically result in extensive new home construction projects.

Numerous Federal projects and a continued expansion of governmental and commercial activities in the Pacific Area, will also tend to stimulate private home building on the West Coast.

* * *

For the first time in U. S. history, home owners outnumber renters, the National Association of Home Builders reports. The mid-century mark reveals owners occupying over half—53%—of all homes. In 1890, only one-third of the homes were owner occupied.

* * *

TIME TO DO SOMETHING

There is an old saying that every American citizen faces two certainties, one is death and the other is taxes.

Considerable progress has been, and is being made by the scientist and the medical profession to prolong the span of life of the individual, and to such progress we are all thankful.

But taxes seem to be a different matter.

There is no progress in reducing the amount of taxes to be paid. On the contrary the tax burden becomes greater year after year until now the amount of taxes paid by every individual is an amount so large that few people are able to comprehend the situation, nor its seriousness.

The following, taken from the annual report of but one of the nation's leading industrial firms is quite revealing information of the present tax situation:

During 1951, the taxes extracted from industry and individuals alike reached the danger point. Corporate income and excess profit taxes have become a matter of grave concern to all stockholders. There is bleak significance in the fact that in 1951 the consolidated income tax of your Company was more than two and one half times (\$50,000,000 tax this year as

against a \$30,000,000 tax last year) the amount paid to stockholders in dividends.

Government has extended its controls and restrictions to the point that all phases of American business operate under severe handicaps of rules and regulations. Some controls may be necessary in time of war. Unfortunately, the tendency is to continue so-called temporary controls long after the need for them has passed, until they acquire the aspect of permanency.

Government contributes no capital, no working tools. It accepts no risks—but demands and receives an ever-mounting portion of business earnings. Stockholders are expected to venture their capital though confronted by diminishing rewards. If there are losses the stockholder must shoulder them. Unless this trend is stopped and reversed, the entire economic system of this country faces destruction.

Yes! It IS time to DO something about taxes, and this being "an election year" it is YOUR OPPORTUNITY to make sure that those you elect into local, state and federal office have a true understanding of the absolute need for economy, including the reduction in taxes.

* * *

In five days in March, the U. S. Treasury took away from the American people in taxes more than all the taxes it collected during the entire year of 1940—the five-day collections totalled \$5,269-millions, while the entire 1940 year produced \$5,264-million.

* * *

REBUILDING EUROPE

When ECA started operations in April, 1948, its objectives were to rebuild the economies of the war-ravaged countries, and to restrain the advance of Communism in Western Europe.

A look at a portion of the record now shows, according to Dr. E. E. Pratt of New York University, that a great modern railway station a mile long has been built in Rome (into which you could put the Pennsylvania Station, Grand Central Station, and all the railroad stations of Chicago and have a few acres left over);

In another town of 40,000, a railway station that would dwarf the stations of Albany, Rochester, and Syracuse. On the Isle of Capri, a new luxurious hotel was erected while many other older, but perfectly suitable, hotels are empty.

On the outskirts of Milan, Rome and Naples are literally hundreds of new apartment houses that would put Park Avenue to shame. Since the average Italian cannot afford to live in these, they have become the source of considerable discontent among the populace.

We wonder how this sort of program aids the productive capacity of the countries involved and repels Communism? * * *

NEWS and COMMENT ON ART

ALBERT M. BENDER MEMORIAL FUND GRANT

Trustees of the Albert M. Bender Memorial Fund have announced that the present awards under consideration, representing the tenth year, are the last to be awarded.

Six awards, carrying a stipend of \$1,500 each, are being granted—two in Art, two in Literature, and two in Photography. The Jury studying entries in Art, which has been limited to painting and sculpture, are Ray Faulkner, Leon Goldin, Leah Rinne Hamilton, Adaline Kent, and Stephen C. Pepper. The Jury in Literature is composed of Joseph Henry Jackson, James D. Hart, Elizabeth Pope, and Robert C. North. The Jury in Photography consists of Ansel Adams, Ellen Bransten, Dorothea Lange, and Minor White, with Edward Weston serving as consultant.

DEDICATION OF NEW ART BUILDING

Dedication of the new Art Building on the Los Angeles campus of the University of California was held April 25-27, with Dr. David F. Jackey, dean of the College of Applied Arts in charge.

The three day celebration was designed to give everyone interested an opportunity to inspect the beautiful \$1,000,000 building, of which Paul R. Hunter of Los Angeles was the architect.

U-shaped in plan, with a large attractively landscaped patio between the projecting wings, the building is of modern design in reinforced concrete and brick, roofed with tile to harmonize with other buildings on the campus. The building features well lighted studios, specialized studios for ceramics, weaving, metal crafts, bookbinding and industrial design, library, seminar rooms, staff offices, large lecture hall, a comfortable lounge, and attractive art galleries.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, announces it will be closed on Friday, May 30th.

During the balance of the month the following exhibits and special events will be observed:

EXHIBITIONS: A special Museum of Modern Art Exhibition by Marcel Breuer, architect; Textiles from Cleveland; Teaching Art—The California School of Fine Arts 16th Annual Drawing and Print Exhibition of the San Francisco Art Associa-

tion; Brooklyn Print Annual; Art Makes Contact; the Alfred Steiglitz Collection; and the Art of Henri Matisse.

SPECIAL EVENTS: Museum Lectures will be held each Sunday afternoon at 3:15 p.m. and Wednesday evening at 8 o'clock under direction of Museum; classes in Painting each Friday evening at 7:30; the Sketch Club meets each Friday at 7:30; and the regular Children's Class on Saturday mornings at 10 o'clock. Motion picture films on Henri Matisse and related French art will be shown each Saturday afternoon at 3:30.

TERRY NATIONAL ART EXHIBITION

A large number of Bay Area artists are being represented in the Terry National Art Exhibition being held in Miami, Florida, this year.

The exhibit carries a number of awards, some of which have been won by West Coast exhibitors.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, will feature a number of outstanding Exhibitions during the month of May, including Father and Son Paintings by Louis B. Siegfried and Lundy Siegfried; Thirteen Watercolorists—18th Annual; Guild of Book Workers of the American Institute of Graphic Arts; and Paintings and Drawings by Gene McComas.

The usual Museum activities and educational programs will also be conducted during the month.

CITY OF PARIS

The Rotunda Art Gallery of the City of Paris, San Francisco, will feature the Eleventh Annual Pacific Coast Ceramic Exhibition and Sale of Pottery and Sculpture, May 6 to June 7. This exhibition is sponsored each year by the City of Paris and is organized by Beatrice Judd Ryan to stimulate artists in production of high standards in ceramic sculpture and pottery.

PORTLAND ART MUSEUM

The Portland Art Museum, West Park and Madison, will again feature one of the most popular art exhibits on the West Coast with the annual exhibition of Artists of Oregon.

Indications are that this year's event will surpass any previously held in variety of subjects and number of participating artists.

RECENT WORK FROM THE OFFICE OF ARTHUR D. JANSSEN, A. I. A. ARCHITECT

WILLIAM H. DASEKING, A.I.A., ARCHITECT, Associate
WALTER L. KELLER, ARCHITECT, Associate

In the fourteen years since Arthur D. Janssen severed his professional connections in Oakland and San Francisco and moved with his family to Atherton, his part in the development of San Mateo County has extended from Sharp Park to Pescadero on the coast, and from Hillsborough to Menlo Park, where his office is located.

"Work originating in the office," Janssen relates, "includes most classifications: schools, churches, stores, office buildings, residences and industrial buildings. Each project is undertaken with the idea that the client's requirements will be met in the simplest and most direct fashion. Constant research is maintained in order that design may be developed to suit the pattern of Peninsula living.

"With each staff member living in the area there is a unified spirit in the group. The office is organized on the atelier system in which each member of the staff may be called upon to contribute to the evolution of the project at any point, from initial planning to final detailing. On many occasions the successful solution of a difficult problem has been possible only through the fusion of several points of view into one coherent scheme," he continued.

Janssen's graduation in Architecture from Wilmerding School of Industrial Arts was followed by architectural design courses with the Beaux Arts Society of New York through the San Francisco Architectural Club, and engineering design courses with the University of California. His experience in the offices of Bliss and Faville, Bakewell and Brown, Arthur Brown, Albert

Lansburgh and W. H. Weeks, included work on the San Francisco Opera House, the San Francisco Veterans Memorial Building, the Pasadena City Hall, and numerous school buildings. His work on the Alameda County Court House was carried on under the direction of the architects for that project.

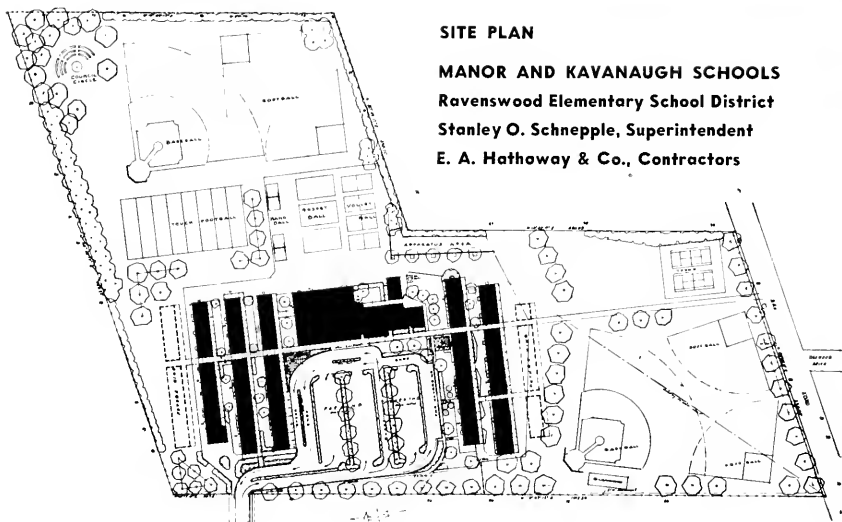

After receiving his certificate in 1929, he was associated in practice with Charles McCall in Oakland. From his own office in San Francisco came the designs for many apartment and commercial buildings, as well as large residences. In an official capacity, Janssen served as architect for the State Harbor Commission. As a member of the San Mateo County Board of Architects, he collaborated with Hervey Parke Clark, James Mitchell and Harry A. Thomsen on the County Relief Home and "Hillcrest", the County Juvenile Home.

Janssen's associates, William H. Daseking, A.I.A., and Walter L. Keller, are an integral part of the organization. Daseking has been associated with Janssen since January 1, 1948. He brings to his work a complete familiarity with the spirit of Peninsula living. A native of Atherton, he attended San Mateo Junior College and was graduated in Architecture from the University of California. During the war he served as a Major in the U. S. Corps of Engineers. Since January 1st of this year, Keller has been an associate of Janssen. A graduate in Architecture of the University of Oregon, he was engaged in architectural work in Honolulu, Portland and Sacramento before coming to the Peninsula. During the war he served as a Captain in the U. S. Army Air Corps. Both men served in the office for several years prior to the date of their association.

SITE PLAN

MANOR AND KAVANAUGH SCHOOLS

Ravenswood Elementary School District

Stanley O. Schneppe, Superintendent

E. A. Hathaway & Co., Contractors

A number of schools have been designed by the office in the last three years in answer to the need of school boards for adequate housing for the rapidly increasing number of children in the area.

"No other current type of building presents a greater challenge, architecturally speaking, than schools. To provide the proper facilities and equipment for comfort and safety, and at the same time to surround the children with a pleasant and effective environment for learning, at a price that will not over-tax the community, demands the utmost ingenuity and flexibility of thinking. To have a part in such a program brings satisfaction and a sense of service that cannot be measured."

Certain important elements are brought into Janassen's preliminary plans for schools. Off-street parking must be located to serve the school during the day and the public whenever school facilities are used by the community. Outdoor athletic areas, such as basket ball and volley ball courts and exercise fields must be related closely to indoor gymnasium facilities. Outdoor reading terraces in conjunction with libraries, and outdoor eating areas adjacent to Multi-purpose rooms are other developments in site planning which have brought the architect and landscape architect into close cooperation. The site plan above is the result of collaboration between Janassen and Arthur Cobbleddick, Landscape Architect, of Menlo Park.

Ravenswood Elementary School District

Stanley O. Schneppe, Superintendent

E. A. Hathaway & Co., Contractors

BELLE HAVEN ELEMENTARY SCHOOL

Ravenswood Elementary School District

Stanley O. Schneppe, Superintendent

Vance M. Brown & Sons, Inc., Contractors

"In fact, coordination is necessary among all concerned with school planning. The successful development of any school depends upon complete cooperation between architect, school board, and school administrators.

"The opportunity to work with such groups is most stimulating. Without exception, our experience has proved that school boards and administrators are eager to include as many improvements as possible in the schools for which they are responsible. Every detail which may simplify the operation of school plants or effect a saving of time and money, is studied, and constant thought is given to improving the standards of health and comfort of the children in the district."

The great assistance given architects by the State Departments concerned with problems of school planning, construction and finance, should be mentioned as a further example of the broad integration of effort directed toward the problem of providing proper school facilities for all communities.

SHARP PARK ELEMENTARY SCHOOL

Laguna Salada Union Elementary School District

A. C. Erickson, Superintendent

Cannon Construction Co., Contractors

A noteworthy feature of Janssen school designs is bilateral lighting with large windows oriented due north. The solution of the problem of screening the clerestory windows on the south has been conditioned by the financial limitations set by the various school boards. Aluminum louvers, shown in the photograph below, light deflecting screens and light control curtains have all been used.

Another solution to the problem of sky glare has been to continue the roof without interruption over the south corridor and high classroom windows. The photograph of Hillview School on page 8 and

the visualizations of Manor and Belle Haven Elementary Schools on pages 10 and 11 show this treatment.

The structural engineering design for the office has been done by I. Thompson, Structural Engineer, of San Francisco, who has most effectively developed the structural elements within the spirit of the architectural design.

An element of design not conveyed by black and white illustration is the emphasis on color in school interiors. The use of plywood wainscots stained in light gray, green, tan or yellow; chalk-

boards in light green, light brown, light blue or coral; white fiberboard upper walls and acoustic tile ceilings, all in complete conformity with recommended standards of light reflectance, have changed materially the atmosphere of school rooms from those done ten years ago.

The view of the classroom (left) shows typical finish materials, (1) acoustic tile ceilings, (2) fiberboard upper walls providing additional tack space, (3) teacher height chalkboards at front, child height boards at side, (4) plywood wainscot, (5) asphalt tile

floor and matching cove rubber base.

The photograph above shows the rear of the same classroom with provision for coat hanging, storage for students and teachers and sink case.

To the office of George Erskine, Associates, Menlo Park, has been given the task of designing mechanical, electrical and sanitary facilities in Janssen schools. Working within the cost limitation set by the school boards, they have provided the maximum in equipment for comfort, safety and utility.

Multi-purpose buildings have been developed in the last few years as a solution to the problem of uneconomic use of space. For many years, gymnasiums have been utilized as auditoriums by the simple device of adding a stage at one end of the room, and using movable chairs on the playing floor. The recent development has been to locate the kitchen adjacent so that the gymnasium-auditorium may also function as a lunch room. The elimination of the separate lunchroom, a large area used only for a short time during the day, has been facilitated by the development of patented tables and benches which fold up into the wall of the Multi-purpose rooms as illustrated below.

The same photograph shows a Multi-purpose room rising platform. To Janssen goes the credit for the design of the platform as a space-saving device. When the room is not in use as an audi-

torium, the platform lowers to become part of the playing floor. George Erskine, Associates, and Bob Hipp perfected the mechanical details and manufacture of the platform mechanism. Chain driven, acme thread screws in each corner of the platform are powered by a $\frac{3}{4}$ H.P. motor and gear reduction box to raise or lower the platform. The platform rises and falls at a uniform rate of about three and one-half inches per minute.

The maximum height is 18 inches but the platform may be used at any level. It is shown below at full height with movable steps in front. Immediately at the right of platform in the photograph, is the soiled dish port and door to the kitchen.

The exterior view above shows a Multi-purpose building and portion of a classroom wing built as an addition to an existing school.

EL PORTAL DEL SOL SCHOOL

San Mateo County Schools

James R. Tormey, County Superintendent of Schools

Earl W. Emley & Son, Contractors

One of the most interesting school problems handled in the past several years is El Portal del Sol, a school for the San Mateo County Department of Special Education, under the San Mateo County Superintendent of Schools. The school, designed for children with cerebral palsy, was built on the property of the George Hall School in the city of San Mateo. Except for the substitute of ramps for steps and the use of an enclosed corridor and connecting wing instead of the open corridor circulation, the exterior conforms to the adjacent buildings.

The Department of Special Education conceived of the project as an environment for orientation as well as learning, and the school plant includes, in addition to three classrooms, multi-use room and service facilities, rooms for speech therapy, occupational therapy, and physical therapy. Except for safety precautions, such as railings on porches and ramps, and grab bars in toilet rooms, the school was developed to reproduce public school facilities into which it is planned to move those children whose response to prescribed therapy indicates that such a transfer can be effected without detriment.

The exterior view above shows the porch outside the physical therapy room and the ramp to the play yard. Supports for the pipe railings are offset to minimize chances of interference with walking aids.

A portion of the physical therapy room is shown below. The special platform shown in use provides exercise in walking and climbing steps on one piece of apparatus. One end is placed against the wall to facilitate turning. The height of the hand rails is adjustable.

being able to work with leaders in the field of construction locally, who are playing an important part in the development of the area. They are keeping pace with the most advanced methods of

construction without sacrificing past standards of excellence and will continue to serve the expanding communities of San Mateo County."

ANNUAL EDUCATION LECTURES Surface Treatments and Finishes for Metals

Puget Sound Chapter, American Society for Metals

Reported by L. F. FRANZ, Boeing Airplane Company

The Puget Sound Chapter of the American Society for Metals, Seattle, Washington, presented its third and final session of the Annual Educational Lectures this month. The lectures were presented in the form of an open panel discussion on "Surface Treatments and Finishes for Metals," with Wm. H. Turner of Pacific Metals Co. as Moderator.

The main topic for discussion was "Aluminum and Aluminum Alloys." The first speaker, J. W. Sweet, Chief Metallurgist, Boeing Airplane Company, spoke on "Surface Finishes Resulting from Machining, Heat Treating, and Abrasive Cleaning." Sweet discussed in some detail the surface conditions found on as-received raw stock and surface conditions developed during processing of parts, and the methods used to reveal and evaluate these surface conditions. The processing of parts including machining and heat treating. The speaker also discussed several of the abrasive and mechanical means for improving the surface appearance of aluminum alloys and gave several definitions of terms used by the trade.

The second speaker, R. N. Page, Research Advisor, Boeing Airplane Company, discussed "Chemical and Mechanical Cleaning and Chemical Coatings of Aluminum and Aluminum Alloys." Page discussed in some detail vapor degreasing, particularly alkaline vapor, and the problems involved in this method of cleaning. The removal of the natural oxide, which is about .01 micron thick, was discussed with the reasons for its removal, among which is to obtain certain chemical finishes. Chemical finishes have several functions, such as corrosion protection, paint base, and a decorative finish.

The third speaker, G. H. Kissin, Finishing Department Head, Kaiser Research Laboratory, Kaiser Aluminum and Chemical Corporation, discussed "Metal Coatings." Two principal methods of obtaining metal coatings were discussed by Kissin. These methods are cladding and electroplating. Cladding is a fabricating process rather than a finishing process, but does provide a finishing

area.**

Top lighting for school classrooms has long been recognized as the most satisfactory. We note in a recent architectural magazine that the realization of top lighting is conceded to be too expensive to achieve.

We are glad to report that we have not only been using top lighting for the past five years, but we are saving money by so doing. Two years previous to any installations were spent in experimentation. Briefly, the system is not only lighting, but ventilation, cooling, heating and a distinct aid to audio-visual education.

Approximately 60 per cent of the ceiling area is covered with skylight with an adjustable ceiling ventilator the full length of the classroom, and glazed with a heat absorbing wire glass. Eight inches below the skylight is a specially designed louver arrangement which will allow as much light as desired to enter the room, but stops all direct rays of the sun for 365 days of the year.

At first we recognized the high north windows and merely used the top lighting to rectify that portion of the room not up to requirements. This system resulted, after many adjustments, in a nearly perfect lighting system. The intensity of light at the desk top was practically uniform throughout the room at all times of day in any kind of weather.

We experimented in the beginning with various depths of louvers, but the results were always the same. The louvers had to be so close together in order to eliminate the direct rays of the sun, that the light penetration was insufficient. We dropped the project for some time, believing that a solution was impossible. Finally we experimented again with louvers of various shapes. Among others we tried "L" shape louvers, trying various depths, with the narrow aperture at the top. The dimension of the aperture at the top of the "L" shaped louver was the same as the distance between the original straight louvers. However, the distance between the "L" shaped louvers was considerably greater, thereby allowing a light play between the louvers. This seemed to solve the problem perfectly after certain minor adjustments were made.

The Board of Trustees of the Eucalyptus School near Sebastopol, California, were sufficiently impressed with our models and facts that they allowed us to incorporate our top lighting system into their new one-room school building. The results were more than satisfactory. Everyone who visited the school commented on the light, airy, and cheerful atmosphere of the room.

This top lighting system was incorporated in 15 schools in rapid succession.

We then decided to eliminate lighting from the

Elevation of the East wall of a typical Class Room, overhead lighting augments windows at left. Curtains provide regulation of light concentration from windows.

north windows and depend entirely on the top lighting as illustrated in the accompanying sketch. We have completed two such schools, one is now under construction and several more are on the drawing boards.

This new arrangement places the skylight equally on each side of the center ridge with the ventilator at the top as before. In this way the top plates are lowered to 8'-6" above the floor and the

north windows are used only for psychological reasons and an aid in ventilation.

Incidentally, we have eliminated all steel from construction, also all pipe columns from open corridors, thus it will be seen that this section eliminates approximately 25% of the volume from most school sections, thereby lowering the cost far more than enough to pay for the extra skylights.

In states outside of California where corrugated

DOUBLE SKYLIGHT TYPICAL CLASS ROOM

. . . TOP LIGHTING

Alsynite can be used in place of glass skylights, the saving will be even greater. The problems of ventilation, heating, cooling and audio-visual education are all solved to a remarkable degree in this design. There is a space of 10 inches between the heat absorbing glass of the skylight and top of the louvers. When the weather is hot, the heat generated under the glass rushes out the ventilator, creating a circulation of air in the classroom and lowering the temperature as much as 4 degrees by thermostatic tests. The action is best described as stack action used in coolers. In cold weather the ceiling ventilator can be closed and the room will then be heated by solar heat. Even though the sun is not shining on a cold day, many times there is enough solar heat to turn off the artificial thermostat. Obviously, this lowers the artificial heat bills considerably.

Darkening for audio-visual education is accomplished by means of curtains between the skylight and the top of the louvers. Since the apertures between the louvers are only 6 inches, the shade is pulled easily. The whole area can be quickly darkened and still provide ample ventilation. The cost of the shades is less than half the cost of darkening curtains at the usual clearstory windows.

We believe we have achieved as near perfect lighting as it is possible to achieve. We have improved the ventilating, cooling, heating and visual education. All this has been accomplished with less cost because of the simplicity in construction and elimination of unnecessary cubage. We believe that this is the greatest advance in schoolhouse design for many years.

The 36" girder beam and the stub columns between which hydraulic jacks were applied as a lateral load.

LATERAL DIAPHRAGMS of Light Gauge CELLULAR STEEL

By JOHN A. BOLL,

Building Panel Division, Detroit Steel
Products Company.

The use of light gauge sheet steel in structural capacities has become increasingly popular in the past thirty years. First used in short span steel roof decks in 1920, the material has since been used as floor forms, long span cellular floors, combination acoustical-structural ceiling-roof decks and insulated steel curtain walls.

Data gathered from a recent lateral diaphragm research program now provides the architects and engineers of the country with a method of designing buildings to resist earthquake damage when using light gauge panels. The results of the tests are also applicable to wind loads and lateral loads from bomb or other explosive shock waves.

Recognizing the need of a practical method of lateral diaphragm design with light gauge structural steel, the Building Panel Division in cooperation with S. B. Barnes, Los Angeles Consulting Engineer, and under the supervision of Professor Fred J. Converse of the California Institute of Technology conducted exhaustive tests at the Bethlehem Shipyards, Terminal Island, Los Angeles.

The Division of Architecture of the State of California and the Building Departments of the City and County of Los Angeles helped develop the data which is now available. At the suggestion of these agencies, the panel diaphragms were tested with 6 to 1 and 3 to 1 length-width ratios in order

*Photo's Courtesy
Detroit Steel
Products Company*

to observe the relation of the effects resulting from these changes.

The actual test was conducted on a panel 48' x 8' (6:1), changeable to 48' x 16' (3:1), with the Fenestra deck reversible in direction. A heavy concrete slab formed a solid, constant foundation from which deflection could be calculated. The panels were erected on a steel framework.

Loads were applied at third points by hydraulic jacking between the stub columns of the test specimen and a 36" girder beam. Reaction ties at the corner stub columns were attached to the girder beam, and rollers under all columns minimized friction. Electric strain gauges and check transit readings were recorded.

The results of the test program are applicable only to the light gauge structural steel panels

Electric strain gauges were used to check stress imposed on Fenestra Building Panels by the lateral load.

manufactured by the Fenestra Building Panel Division.

No shear connections were found necessary to develop proper diaphragm qualities since, with flat surface down, the panel performs as the diaphragm in the plane of the beam flanges to which it is welded.

When used in accordance with the manufacturer's specifications, the X pattern of welding provides a diagonal bracing tie action.

Butt plate and weld design.

The 48'x8' test panel being erected at Bethlehem Shipyards, Terminal Island, Las Angeles.

84TH ANNUAL CONVENTION OF THE AMERICAN INSTITUTE OF ARCHITECTS

Major speakers at the technical sessions of the 84th annual convention of The American Institute of Architects, June 23-27, New York City, have been announced by Arthur C. Holden, New York architect and chairman of the convention committee.

Six major speakers will develop various aspects of this year's technical theme, "Structural Resources for Architectural Design," including Architectural Concrete with Walter A. Taylor, A.I.A. Director of Research and Education, moderator. Speakers include Roger Corbetts, New York

WOMEN'S ARCHITECTURAL LEAGUE OF THE EAST BAY

The East Bay Chapter of the Women's Architectural League held their annual Home Tour on May 15th, with six outstanding homes in the Oakland area being shown. All of the houses were of contemporary design and constructed within the past three years, and represented the work of architects Vernon De Mars, Kitchen & Hunt, Anshen & Allen, Campbell & Wong, Andrew P. Anderson, Jr., and Confer & Ostwald.

In charge of this year's event were Mrs. Walter Olds, Chairman; Mrs. John Zerkle, Mrs. Roger Lee, Mrs. Irwin Johnson, Mrs. George Simonds, Mrs. Andrew Anderson, and Mrs. Harry Clausen.

C. H. SAWYER DIES IN PALO ALTO HOME

Charles H. Sawyer, at one time City Architect for the City and County of San Francisco, and retired from practice since 1938, died at his home in Palo Alto on April 21 at the age of 83.

A native of San Francisco, Sawyer took an active part in much of the city's early construction.

SUMNER MAURICE SPAULDING DIES IN LOS ANGELES

Sumner M. Spaulding, 59, nationally known architect and city planner, died at the California Hospital in Los Angeles on April 10, following an illness of three months.

He was instrumental in the design of the Los Angeles Civic Center and was associated with J. C. Austin in planning the Los Angeles Municipal Airport.

A director, delegate, vice-president, president, Fellow-AIA, and active in The American Institute of Architects, Spaulding was recognized throughout Southern California as one of the nation's great architects.

FRANK JAMES, ARCHITECT, DIES AT IDAHO HOME

Frank L. James, 74, one of the nation's foremost golf course architects, died at his Moscow, Idaho, home on April 10.

A veteran golf professional and builder of more than 100 courses in the United States, he had been in charge of the University of Idaho's course since its construction in 1936.

SOUTHERN CALIFORNIA JOINT CONFERENCE AND EXHIBIT

A conference of the several planning agencies of Southern California was held this month in Los Angeles to discuss latest developments in the growth and expansion of the area.

Participating in the conference were the Los Angeles City and County Regional Planning Offices, the California Chapter of the American Institute of Planners, the American Society of Landscape Architects, and the Southern California Chapter A.I.A.

coat. Many problems are encountered in electroplating metals onto aluminum because of the oxide coating. Kissin discussed some of the methods used, such as the fusion method and the zinc immersion process. Several other methods have been and are being developed, some of which require the removal of the oxide film while others take advantage of it. Some platings are used as a base for further plating or as a strike for banding methods.

ALBERT FARWELL BEMIS ARCHITECTURAL FELLOWSHIP

The Albert Farwell Bemis Foundation of the Massachusetts Institute of Technology is offering for the second year a Bemis Foundation Fellowship of up to \$2500 for a program of graduate research in housing during 1952-53, according to an announcement by Burnham Kelly, director of the Foundation.

Any significant aspect of housing, from broad studies to specific problems, may be the basis for

research. Candidates will be selected on the basis of their qualifications and of the contributions which they may be expected to make in the field of "shelter for mankind."

WASHINGTON STATE CHAPTER

The annual Joint Student-Alumni-A.I.A. meeting on May 8th, at the Seattle Yacht Club, was another outstanding success with Charles T. Pearson acting as master of ceremonies.

Highlight of the program was an address by Glenn Stanton, president of The American Institute of Architects, on architecture and the architectural profession.

An exhibit of work by students and practicing architects at the School of Architecture, University of Washington, and awarding of a number of merit recognition to students including the A.I.A. Gold Medal and Second Award, the A.I.A. Scholarship, the Alpha Rho Chi Medal, the Faculty Awards and the Alumni Traveling Scholarship completed the program.

The program for the Third Annual A.I.A. Honor Awards Competition which is open to Chapter members, Corporate, Associate, Junior and Student Associates was announced and includes a Single Family residential unit to cost \$20,000 and under; Single Family residence to cost over \$20,000; Commercial and Industrial structures; and Institutional and Public Buildings.

SOUTHERN CALIFORNIA CHAPTER

N. Bradford Trenham, general manager of the California Tax Payers' Association, addressed the May meeting on the subject "The Architect is Interested in Taxes." The speaker emphasized the importance of rising taxes to every type of business and profession and urged architects to give serious consideration to the effect of taxation upon their profession.

Appearing on the same program and speaking
on the subject of "The County Superintendent and
the Architects" was Dr. C. C. Carpenter, Assistant
Superintendent of County Schools, Prof. in Educa-
tional Administration at the University of Southern
California.

The meeting was also the annual meeting with
the Student Chapter at the University of Southern
California and a number of awards and recog-
nition of merit were presented students.

Until further notice the office of the Chapter will
be open Monday through Thursday and will be
closed the balance of the week.

CALIFORNIA COUNCIL OF ARCHITECTS

The California State Chamber of Commerce has
called a conference in San Francisco on June 12
to discuss the problem of distressed school districts
including proposed legislation, procedures, and
other important phases of the state's school con-
struction program in which architects have a vital
interest.

Architects of California will be represented at
the meeting by officers of the California Council
of Architects.

NORTHERN CALIFORNIA CHAPTER

Through the concerted efforts of the Chapter and
Francis Joseph McCarthy, president, an item was
recently reinstated in the annual budget of the
City and County of San Francisco, calling for the
development of a Civic Center Plan. The project
was a part of the original budget but was in dan-
ger of being postponed as an economy act until
given final approval by Mayor Elmer Robinson
following a number of conferences with McCarthy.

SAN DIEGO CHAPTER

The regular April meeting was a joint confer-
ence with the Producers' Council at which time the
members were given an opportunity of viewing
many new products being offered by Council
members. An interesting and educational exhibit

cupation forces. He began his military career with the U. S. Army in 1925 as company officer of the 13th Engineers at Fort Humphreys, Virginia.

THE FEMEINERS

Nerice Fugate, director of the House of Charm in San Francisco, recently presented a program on "Charm" with spring hats for the occasion being furnished by the H. Liebes Company.

Mrs. H. S. Kellem was the hostess of the day. Mrs. A. C. Horner is president of the group which comprises wives of members of the American Society of Civil Engineers, and the Structural Engineers Association of Northern California.

NATIONAL SOCIETY OF PROFESSIONAL ENGINEERS

The National Society of Professional Engineers, an organization of 27,000 registered engineers in 38 states, having 300 chapters, will hold its annual meeting in Tulsa, Oklahoma, June 5-7.

The two day conference will be presided over by L. L. Dresser of Tulsa, President of the association.

ENGINEERS EXAMINATION FOR CALIFORNIA LICENSE

Of the 104 candidates taking the examination for license to practice in California, 22 per cent passed successfully and thereby set a new all time high record. Twenty three of the successful candidates passed with a grade of 70 per cent or more. Ralph Gordon Dean and Paul Hugo Winter tied for high grade with a 88 per cent, while the lowest grade of all candidates was 10.5 per cent.

Among the new Structural Engineers are: Reuben R. Alvey Eugene D. Birnbaum, Bernhard Cardan, and Arthur W. Parker of Los Angeles; Thomas G. Atkinson, La Jolla; Jack S. Barrish, Sacramento; Truland H. Carter, Reseda; Wm. D. Crouch, Jr., Woodland Hills; Ralph G. Dean, Colma; J. M. Fratt, and Paul H. Winter, Pasadena; Bradley B. Garrettson, W. C. Hamilton, and Christopher Y. Lau, Oakland; W. Howard Gerfen, San Marino; C. D. Hoover, Whittier; Milton G. Leong, San Francisco;

John E. Soehrens, Altadena; James L. Stratta, San Mateo; Wayne Taul, Fresno; Howard G. Taylor; Compton; Robert H. Weight, Rivera; and Ralph A. Wiese, Bakersfield.

UNIVERSITY OF CALIFORNIA COLLEGES OF ENGINEERING

Qualifying examinations for the University of California's colleges of engineering at Berkeley and Los Angeles were held early this month in some twenty-three cities scattered throughout the state.

The Engineering Examinations, Lower Division, were taken by students wishing to enter the col-

ANNUAL TABLE TOP EXHIBIT

The Producers' Council of San Francisco is scheduling their Annual Table Top Exhibit for Wednesday, May 21, in the Terrace Room of the Fairmont Hotel in San Francisco.

The Exhibit this year will include about fifty participating members of the Producer's Council and there will be on display the latest developments in a wide range of building materials.

The Exhibit will open at 3:30 p.m. and will be attended by a large group of architects, engineers, contractors and Federal, State and Municipal representatives from the Bay Area.

Cocktails will be served between the hours of 5:00 p.m. and 7:00 p.m.

This occasion always proves to be a very successful one, both from the informational as well as the social standpoint.

THE DAVENPORT STORY

At our last regular informational meeting held at noontime, April 14, at the Palace Hotel, the Aluminum Company of America presented their latest film entitled, "THE DAVENPORT STORY" which showed the latest developments in design and construction with aluminum.

This was truly a fine film and we are sure that the entire Producers' Council joins us in offering our congratulations to the Aluminum Company of America and to Mr. Al West who officiated at the meeting.

For those who had the pleasure of seeing and hearing this film, it is quite evident that the Council's efforts to improve the type of presentation at our informational luncheons is bearing fine fruit.

GUESTS AT INFORMATIONAL MEETINGS

Last month we discussed the rotational system by which architects and engineers are invited as

guests of member companies of the Producer's Council to attend the various informational meetings. Due to the large number of architects and engineers, it is impossible to attempt to screen these guests to determine who would be interested in any one particular informational meeting and not another.

As it is our desire to have all interested parties attend these informational meetings, we are listing below the meetings which will be presented during the remaining part of this year and the Producers' Council wishes to extend an invitation on a Dutch Treat basis to all architects and engineers who would be interested in hearing the program and who, due to the rotational system of selecting guests, did not receive an invitation to attend as a guest of one of the members of the Council. Invitations to guests are generally in the mail about two (2) weeks before the meeting.

The charge for these luncheons is \$2.25 per person, and we ask that reservations be made sufficiently in advance so that we can properly prepare the accommodations. For reservations call A. L. West, Jr., YU. 6-6484.

INFORMATIONAL MEETINGS SCHEDULE

PALACE HOTEL, SAN FRANCISCO

July 14—"Radiant Baseboard Heating," by Bastian Morley Company, Inc.

August 4—"Protective Treatment of Lumber," by American Lumber & Treating Company.

September 8—"The Story of a House," By Kimberly-Clark Corp.

October 6—"Classroom Daylighting," by Detroit Steel Products Company.

November 5—"Steel Double-Hung Windows for the Modern Residence," by Truscon Steel Co.

leges of engineering at the freshman or sophomore level, and included aptitude tests for measuring abilities necessary for success in engineering training.

The Upper Division Examination was taken by students wishing to enter at the junior or senior level and included achievement tests in English usage, engineering drawing, mathematics, chemistry, and physics.

NOTED DESIGNER VISITS UNITED STATES

Maurizio Tempestini, Florentine architect and designer, arrived in New York early this month for an extensive visit to the United States.

Tempestini is noted for his designs in wrought iron furniture, decorative accessories and interiors and comes to this country for a study of American home furnishing trends.

CALIFORNIA STATE BOARD OF ARCHITECTURAL EXAMINERS

The California State Board of Architectural Examiners met in Los Angeles early this month to discuss the examinations to be held at the University of Southern California and University of California in June and to act on other routine matters.

According to reports some 320 applicants sat for the December examination with 63 qualifying for the oral examination to be held this month. Twenty-four of the successful candidates were from northern California and 39 from southern California.

Earl T. Heitschmidt, F.A.I.A., Los Angeles, was elected president of the Board for the ensuing year succeeding C. J. Paderewski of San Diego who is now serving as secretary.

Other members of the Board include Herbert J. Powell, F.A.I.A., Los Angeles; Norman K. Blanchard, A.I.A.; and William Clement Ambrose, A.I.A., San Francisco.

TELEPHONE COMPANY RESTRICTS PHONE BOOK LISTINGS

The Pacific Telephone and Telegraph Company is subscribing to the policy that no person except a licensed architect can have a listing under the Classification of Home Plans in the Classified Telephone Directory.

Future listings in the Directory will be in conformity with an opinion of the Attorney General which points out that no person except an architect can have a listing under such classification.

A.I.A. ACTIVITIES

(From page 31)

had been prepared by the Producers' Council.

Chapter members have gone on record as supporting an Oklahoma Chapter resolution favoring motion picture propaganda as the most effective way of showing architects' activities.

A "Glen Stanton for Second Term" is being being advocated by a number of members who feel the present President of the AIA should be retained for a second term.

WILL PRESENT PAPER AT ANNUAL AIA CONVENTION

Architect Henry L. Wright of Los Angeles has been selected to present a paper on "Conservation in School Buildings" at the Annual Convention of The American Institute of Architects which is being held in New York City June 23-27.

The general theme of the meeting is to be "Structural Resources for Architectural Design."

HIGHWAY OFFICIALS MEET IN SEATTLE IN JUNE

The 31st annual conference of the Western Association of State Highway Officials will be held in Seattle, Washington, on June 5, 6, and 7.

William C. Pedersen, Washington Department of Highways, is general chairman of the conference and will coordinate the programmed activities.

Among subjects scheduled for discussion will be the problems facing highway programs in various states and efforts being made to solve them.

SOUTHERN CALIFORNIA CHAPTER PRODUCERS' COUNCIL MEETING

A joint meeting of the San Diego Chapter of the American Institute of Architects and the Producers' Council at San Diego recently afforded architects an opportunity to view a table-top display of the newest products of Council members.

Arrangements for the event were in charge of Harry Bennett and Bob Sandwick representing the Producers' and Dick Pennell and Louis Dean for the architects.

SOUTHERN CALIFORNIA OBSERVES ANNUAL MODERN HOMES TOUR

The Radcliffe Club of Southern California will sponsor the 1952 Modern Homes Tour which will feature the City of Pasadena.

A number of architects are participating in the event and include Harry Aarens, Gregory Ain, Henry L. Eggers, Robert Faxon, Douglas Honnold, Edla Muir, Richard Neutra, Lucille Raport, Burton Romberger, Rudolf M. Schindler, Burton A. Schutt, Morris D. Verger, and Harold Zook.

"The time has come for you to begin planning non-defense industrial, commercial and institutional construction involving fabricated structural steel," Mr. Post stated.

"By the third or fourth quarter of 1952 there will be ample plant capacity to handle additional business of this nature. At the same time, the structural steel supply situation shows definite signs of improving, although a prolonged steel strike would change the picture. Steel bars are expected to continue in short supply for some time, according to the Defense Production Administration.

"In view of the lead time required before fabrication can actually begin, it is not too early now to start working drawings for projects which you have had to shelve because of restrictions," the letter concluded.

REORGANIZATION OF ARCHITECTURAL AND ENGINEERING FIRM ANNOUNCED

The Architectural-Engineering firm of Kistner, Curtis & Wright, which has been carrying on its main office activities in Los Angeles, California, for many years with branch offices in San Diego, California, and Los Alamos, New Mexico, has been reorganized into two separate firms. The new firms are now Kistner, Wright & Wright in Los Angeles, with project offices in San Diego, California and Los Alamos, New Mexico, and the firm of Kistner, Curtis & Foster in San Diego, California.

There is no change in the personnel of either firm, as the San Diego organization has operated, under Mr. Curtis, more or less independent of the Los Angeles office since 1946.

The former Los Angeles office is now known as Kistner, Wright & Wright, comprising a partnership of T. C. Kistner, H. L. Wright, architects, and W. T. Wright, structural engineer. The former San Diego office is now known as Kistner, Curtis & Foster, comprising a partnership of T. C. Kistner, R. R. Curtis, architects, and G. D. Foster.

Over the past ten years the former organization completed working drawings and specifications for buildings and structures totalling over \$170,000,000 in construction cost. These included 540 projects for more than 70 school districts, the Salton Sea Base, numerous projects at Los Alamos, New Mexico, for the Atomic Energy Commission, projects for the Navy's Bureau of Yards and Docks at MCAS Cherry Point, North Carolina, MCAS El Toro, California, 12th Naval District, San Francisco, and development of the Master Jet Field at Miramar, San Diego, California.

One of Los Angeles' largest complete Architectural-Engineering firms, the organization has had an average employment of 280 persons, with a peak of 315 including architects and structural, mechanical, electrical, and civil engineers. It is an

HOUSING THE AGING CONFERENCE SCHEDULED

A three day conference has been scheduled by the University of Michigan on July 24-26, to consider the housing needs of healthy, chronically ill, confused, and disable older people living in urban and rural areas of the nation.

Among topics to be discussed at the Fifth Annual Conference on Aging are types of housing and living arrangements; architectural designs and costs; hygiene and safety standards; social and economic aspects of housing; and auxiliary services.

The conference is designed to serve as a forum for interchanging information and for getting action on the difficult problem of financing housing for the aging. It is directed to national, state, and local planners; physicians, nurses, and public health workers; industrial retirement counselors; welfare and social work personnel; architects, builders, realtors; safety and sanitary engineers; public and private investment and financing agencies; and directors of old age homes and their personnel.

The conference is under the co-sponsorship of

ALASKA CONSTRUCTION CONTINUES ACTIVE

An invitation to all contractors to bid on an outside utilities project to cost over 5-million dollars has been issued by the Alaska District, Corps of Engineers, with headquarters in Anchorage.

This Alaskan Command contract calls for construction of all outside utilities to serve eighty-three 8-family row-type quarters, two 750-man concrete block barracks. It requires the construction of an addition to the existing temporary boiler plant; construction of railroad trackage, a temporary boiler plant and a cold storage building.

In addition there is the construction of a loop power line to the dock area, roads, drainage systems, parking areas and grading. There is also electrical work serving the area north of the runway, ACS toll center, POL pump house, and POL combination building.

Bids on this particular project will be accepted at offices in the New Washington Hotel, Seattle, until April 1, 1952.

CALIFORNIA REDWOOD ASSOCIATION ENLARGES ITS MEMBERSHIP

Frank C. Kilpatrick, president of the California Redwood Association, has announced the membership of the Warm Springs Redwood Company of Willits, California, of which Charles F. Wilson is president.

The Warm Springs Lumber Company was founded by Ray L. Wilson, father of the present president, at Warm Springs, Oregon, and represents one of the older firms in the West Coast lumber industry.

SCHOOL BONDS VOTED

Voters of the Acalanes High School District in Orinda (California) have approved a school bond issue of \$1,500,000 for construction of new high school buildings.

Kump Associates of San Francisco are the architects.

BOOK REVIEWS PAMPHLETS AND CATALOGUES

ARCHITECTURE OF THE OLD NORTHWEST TERRITORY. By
Rexford Newcomb. The University of Chicago Press, \$750
Ellis Ave., Chicago 37, Ill. Price \$20.00.

This is an interesting new book devoted by the author to a study of early architecture in Ohio, Indiana, Illinois, Michigan, Wisconsin and a portion of Minnesota. It contains many photographs of beauty and brilliance recording American architecture in the Old Northwest Territory, from the rough hewing of cabins out of virgin timber to the elaborate over-gilding of the Gothic Revival.

Through a series of magnificent photographs and explanatory text, Dean Newcomb traces the changes from the original styles to more native American forms and reflects the genius of the people — English, French, German, Scandinavian, and Scotch-Irish—who comprised the population of the area.

Dean Newcomb is professor of the history of architecture and Dean of the College of Fine and Applied Arts at the University of Illinois; a Fellow of The American Institute of Architects; the American Association for the Advancement of Science; and the Newberry Library. He has written numerous books on architecture in the United States.

PERSPECTIVE DRAWING. By J. C. Morehead & James C. Morehead, Jr. The Elsevier Press, 402 Lovett Blvd., Houston, Texas. Price \$6.00.

Ever so often a new way of doing an old thing is developed, a new way so simple that you wonder, "why hasn't that been done before."

PERSPECTIVE DRAWING is just such type of book. An accurate, easy-to-understand technique for representing space on a flat surface that saves about half the time needed for the tedious, outmoded, classical manner of perspective has been presented by the authors.

The 45 degree-line method, developed at Carnegie Institute of Technology and The Rice Institute, has been employed to develop 1) the same facility for drawing three-point perspective as for two-point, 2) A quick method for enlarging an existing perspective, 3) The elimination of out-of-reach vanishing points, 4) An easy means for determining perspective detail, 5) One basic operation for all perspectives, and 6) Numerical tables for finding vanishing points.

A feature of the book is the fact that drawings are placed facing appropriate text.

HOW TO IMPROVE ENGINEERING-MANAGEMENT COMMUNICATIONS. By National Society of Professional Engineers, 1121 15th Street, Northwest, Washington, D. C. Price \$2.00.

This report is a summary of the first of a series of four Executive Research Surveys begun in 1951 by the National Society of Professional Engineers, through its Professional Engineers Conference Board for Industry.

It pools the experience of more than 300 companies employing engineers, on the subject of "How to Improve Engineering-Management Communications." The purpose of the research program is to assemble and publish current information on engineering-management relations for the benefit of industrial employers of engineers and the engineering profession.

This is the first of a group of four reports to be published.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

370. SELECTION MANUAL FOR AIR DIFFUSERS. A new Selection Manual #40—1952 containing comprehensive technical data for simplifying choice of proper air diffusers in air conditioning systems has been announced by Anemostat Corporation of America. Now in its second revised edition, the Anemostat Manual contains a complete new section on Anemostat High Pressure Units for high pressure, high velocity systems. Generously illustrated with photographs, tables on performance

data, and case examples, the manual shows how proper locations and correct number of required units are determined. A.I.A. 301, sixty-four pages illus., 4/52.

371. ALTERNATE METHODS OF SCHOOL CONSTRUCTION. Structural Clay Products Institute has released a booklet summing up alternate methods of school construction which require less steel and other critical materials. This booklet has been distributed to leading educators and school officials. The booklet illustrates loadbearing masonry walls and interior clay tile walls. 10 pages illus., 4/9/52.

372. ASPHALT TILE COLOR CLASSIFICATION CHART. The Asphalt Tile Institute has just issued an up to date Color Classification Chart designed to clarify to the trade the various asphalt tile manufacturers' color designations. The new chart is a guide to show the commercial equivalents of the manufacturers' color lines which give the same color tone or effect. It was developed for the convenience of architects, builders, flooring contractors, and anyone who may have to select and specify asphalt tile. Some 28 colors are listed in the chart. It represents the complete color line of each manufacturer in the A, B, C and D Color Groups., 4/52.

373. SEISMIC BUILDING DESIGN. A new brochure covering the development and test results of wind and earthquake resistant diaphragms construction using Fenestra Building Panels. This booklet is the result of tests conducted by Consulting Engineer S. B. Barnes, Los Angeles, under the supervision of Professor Fred J. Converse, California Institute of Technology, for the Detroit Steel Products Company.

374. WESTERN PINE MOULDING PATTERNS. The Western Pine association recently announced standardization of 114 casing and base moulding patterns under the nomenclature of the WP series. Effective date for the standardization is June 1, 1952. A new publication, "Western Pine Moulding Patterns," illustrates each of the new patterns in full size details. Measuring 8½x11", the folder is punched for insertion in three ring binders. The standardization action was made in February at the Association's annual meeting and follows by two years standardization of 17 Western Pine paneling patterns. The action was taken by representatives of the more than 325 Western Pine member mills which produce the Western Pines and Associated Woods in 12 western states. G-22, sixteen pages illus., 4/52.

375. CONCRETE HARDENING AND DUSTPROOFING. A brochure covering the qualities of Lapidolith for concrete hardening and dustproofing is available. The properties of Lapidolith as a chemically active concrete hardening agent are fully described. Performance test data is included with charts and application specifications. A.I.A. 3-B-1, four pages, 4/52.

376. WALNUT VENEER TYPES. A new guide and set of standard specifications for the selection of walnut veneers has been released for architects, decorators, furniture manufacturers, and others who specify cabinetwoods for furniture or architectural woodwork. The booklet shows all principal figure types of American Walnut now available in quantity—some in hundreds of thousands, other types in millions of feet. Each of the numerous plates has a number, to be used in specifying that figure type. Thus the designer can order from the plywood supplier and he, in turn, can order from the veneer firm, without possibility of error. Photographs illustrate the variety of figures obtainable by the same method of cutting and by various methods of cutting. Twenty pages, illus., 3/52.

377. ACUSTI-LUMINUS CEILINGS. A brochure covering the installation and qualities of the Acusti-Luminus Ceilings manufactured by Luminous Ceilings, Inc. has been released. The brochure shows typical ceilings and covers complete details of this combination plastic, baffled washable luminous ceiling. The brochure also covers the west coast installations of this type ceiling. Four pages, illus., 3/52.

378. ANNEALED PERLITE AGGREGATES. A catalog covering the qualities and properties of Coralux Perlite aggregate has been released by F. E. Schundler & Company. Charts covering the surfacing of walls and their fire-ratings as well as specifications for applications are given completely. Eight pages illus., 9/51.

SAN FRANCISCO ARCHITECTURAL CLUB VISITS KRAFTILE PLANT

Thirty-eight members and guests of the San Francisco Architectural Club led by President Charles Dennis and Trustee Otto Hintermann, recently visited the Kraftile plant at Niles, California, where they toured the plant following a lunch at the famous International Kitchen as guests of the Kraftile Company.

Arrangements for the trip through the tile manufacturing plant were in charge of vice-president Joe Scoma of the Architectural Club, while Jim Crawford, vice-president, was the host for the occasion with Kraftile foremen serving as guides and explaining many phases of the company's manufacturing activities.

LOS ANGELES LIBRARY OF ARCHITECTURE AND ARTS

Reorganization of the Library of Architecture and Allied Arts, 3723 Wilshire Blvd., Los Angeles, has been completed under the direction of Mrs. Genie Alexander, librarian.

Several hundred new books, periodicals, pamphlets and handbooks have been added to the Library covering the fields of home buying and building, Church planning, city planning, commercial and industrial design, architectural history, modern design philosophy, landscape architecture interior design, and biographies of famous architects.

The Library is open from noon to 5 p.m., Monday through Friday, and Wednesday evening 7-11.

ENGINEERS JOINT COUNCIL SEND CONVENTION DELEGATES

The Engineers Joint Council of New York has announced it will send official delegates to the Third UPADI Congress in New Orleans on August 25-30.

Purpose of the UPADI, or Pan-American Union of Engineering Societies, is to provide an organization encompassing the engineering societies of both North and South America and to promote their activities on an international scale.

This year's Congress is under the leadership of Engineer Luis Giannattasio of Montevideo, Uruguay, with James M. Todd, former president of EJC and ASME in charge of arrangement in New Orleans.

NEW BARRACKS AND MESS HALL

Construction of a new barracks and mess hall to accommodate 1300 enlisted men has been started at the U. S. Naval Air Station at Moffett Field.

Cost of the project which will include a number of changes to present installations at the field will exceed \$1,000,000 according to U. S. Navy Public Works officials.

ESTIMATOR'S GUIDE

BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight charge, at least, must be added in figuring country work.

BONDS—Performance or Performance plus Labor and Material Bond(s), \$10 per \$1000 on contract price. Labor & Material Bond(s) only, \$5.00 per \$1000 on contract price

BRICKWORK—MASONRY—

Common Brick—Per 1 M laid—\$100.00 up (according to class of work)
Face Brick—Per 1 M laid—\$200.00 and up (according to class of work)
Brick Steps—\$3.00 and up.
Common Brick Veneer on Frame Bldgs.—Approx. \$1.20 and up (according to class of work).
Face Brick Veneer on Frame Bldgs.—Approx. \$2.00 and up (according to class of work).
Common Brick—\$36.00 per M—truckload lots, delivered.
Face Brick—\$81.00 to \$106.00 per M, truckload lots, delivered.

Gleazed Structural Units—
Clear Gleazed
2 x 6 x 12 Furring \$1.60 per sq. ft.
4 x 6 x 12 Partition \$1.90 per sq. ft.
4 x 6 x 12 Double Faced
Partition 2.25 per sq. ft.
For colored glaze add 30 per sq. ft.
Mentel Fire Brick—\$105.00 per M—F.O.B. Pittsburgh.
Fire Brick—Per M—\$111.00 to \$147.00.
Carriage—Approx. \$10.00 per M.
Paving—\$75.00.

Building Tile—
8 1/2 x 12 inches, per M \$39.50
6 1/2 x 12 inches, per M 105.00
4 1/2 x 12 inches, per M 84.00
Hollow Tile—
12 x 12 1/2 inches, per M \$146.75
12 x 12 1/2 inches, per M 156.35
12 x 12 1/2 inches, per M 177.10
12 x 12 1/2 inches, per M 235.30
F.O.B. Plant

BUILDING PAPER & FELTS

1 ply per 1000 ft. roll \$5.30
2 ply per 1000 ft. roll 7.80
3 ply per 1000 ft. roll 9.70
Brownish, Standard 500 ft. roll 4.85
Sisal-kraft, reinforced, 36 in. by 500 ft. roll 7.00
Sheathing Papers—
Asphalt sheathing, 15-lb. roll \$2.00
30-lb. roll 2.79
Dampcourse, 216-ft. roll 2.75
Blue Plasterboard, 60-lb. roll 5.10
Felt Papers—
Deadening felt, 3/4-lb., 50-ft. roll \$3.23
Deadening felt, 3/4-lb., 37.5 ft. roll 3.75
Asphalt roofing, 15-lbs. 2.00
Asphalt roofing, 30-lbs. 2.79

Roofing Papers—
Asphalt flg., 15 lb. \$2.09
Standard Grade, 108-ft. roll, Light 1.87
Smooth Surface, Medium 2.18
Heavy 2.56
M. S. Extra Heavy 2.76

BUILDING HARDWARE—

Sash cord com. No. 7 \$2.65 per 100 ft.
Sash cord com. No. 8 3.80 per 100 ft.
Sash cord spot No. 7 3.65 per 100 ft.
Sash cord spot No. 8 3.35 per 100 ft.
Sash weights, cast iron \$100.00 ton.
1-Ton bolts, per 100 lbs. \$3.75
Less than 1-ton bolts, per 100 lbs. 3.75
Nails, per keg, base \$11.80
8-in. spikes 11.80
8-in. Knob lock sets 1.80
Butts, dull brass plated on steel, 3/2 x 3/2 76

CONCRETE AGGREGATES—

The following prices net to Contractors unless otherwise shown. Carload lots only

	Bunker per ton	Del'd per ton
Gravel, all sizes	\$2.44	\$2.90
100 Sand	2.38	3.13
Concrete Mix	2.38	3.06
Crushed Rock, 1/4" to 3/4"	2.38	2.90
Crushed Rock, 3/4" to 1 1/2"	2.38	2.90
Roofing Gravel	2.81	2.90
River Sand	2.50	3.00
Sand—		
Lapis (Nos. 2 & 4)	3.56	3.94
Olivine (Nos. 1 & 2)	3.56	3.88

Cement—
Common (all brands, paper sacks), carload lots, \$3.55 per bbl. f.o.b. car; delivered \$3.60.
Per Sack, small quantity (paper) \$1.05
Carload lots, in bulk per bbl., delivered 2.79
Cash discount on carload lots, 10c a bbl., 10th Prox., less than carload lots \$4.00 per bbl. f.o.b. warehouse or delivered.
Cash discount 2% on L.C.I.
Trinity White { 1 to 100 sacks, \$3.13 sack
warehouse or del.; \$7.56
Madusa White { bbl. carload lots.

CONCRETE READY-MIX—

1-2-4 mix, to 10 yards \$12.00
10 to 100 yards 11.00
100 to 500 yards 10.50
Over 500 yards 10.30
• Delivered to site.

CONCRETE BLOCKS—

	Hay-dite	Be-salt
4 1/2 x 8 1/2 inches each	\$1.17	\$1.18
6 1/2 x 8 1/2 inches each	22	22.5
8 1/2 x 8 1/2 inches each	26	26
12 1/2 x 8 1/2 inches each	34	39
12 1/2 x 12 inches each	—	60
Haydite Aggregates—		
3/4-inch to 3/8-inch, per cu. yd.	\$7.25	
3/8-inch to 1/4-inch, per cu. yd.	7.25	
No. 6 to 0-inch, per cu. yd.	7.25	

DAMP-PROOFING and Waterproofing—

Two-coat work, \$9.00 per square.
Membrane waterproofing—4 layers of saturated felt, \$10.00 per square.
Hot coating work, \$5.00 per square.
Medusa Waterproofing, \$3.50 per lb. San Francisco Warehouse
Tricoat concrete waterproofing, 60c a cubic yd. and up.

ELECTRIC WIRING—\$15 to \$20 per outlet for conduit work (including switches).
Knob and tube average \$6.00 per outlet.

ELEVATORS—

Prices vary according to capacity, speed and type. Consult elevator companies.
Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about \$9,500.00.

EXCAVATION—

Truck, \$1.00; clay or shale, \$1.50 per yard.
Sand, \$30 to \$45 per day.
Above figures are an average without water. Steam shovel work in large quantities, less; hard material, such as rock, will run considerably more.

FIRE ESCAPES—

Ten-foot galvanized iron balcony, with stairs, \$250 installed on new buildings; \$300 on old buildings.

FLOORS—

Asphalt tile, 1/8 in. guage 18c to 35c per sq. ft.
Composition Floors, such as Magnesite, 40c-\$1.25 per sq. ft.
Linoleum, standard guage, sq. yd. \$2.75
Masticpave—\$1.50 per sq. yd.
Battleship Linoleum—1/8"—\$3.00 sq. yd.
Terrazo Floors—\$1.50 per sq. ft.
Terrazo Steps—\$2.50 per lin. ft.
Mastic Wear Coat—according to type—20c to 35c.

Hardwood Flooring—

Oak Flooring—T & G—Unfin.—
Clear Old, White \$1 1/2 x 2 1/2 3/4 x 2 1/2 \$425 \$405 \$
Clear Old, Red 405 380 \$
Select Old, Red or White 355 340 \$
Clear Pln., Red or White 355 340 335 315
Select Pln., Red or White 340 330 325 300
1st Common, Red or White 315 310 305 280
2nd Common, Red or White 305
Refinished Oak Flooring—
Prime Standard
1/2 x 2 \$367.00 \$359.00
1/2 x 2 1/2 380.00 370.00
3/4 x 2 1/2 390.00 381.00
3/4 x 2 3/4 375.00 355.00
3/4 x 3/4 395.00 375.00
3/4 x 2 1/4 415.00
Unfinished Maple Flooring—
1 1/2 x 2 1/4 First Grade \$390.00
1 1/2 x 2 1/4 2nd Grade 365.00
1 1/2 x 2 1/4 2nd & 8tr. Grade 375.00
1 1/2 x 2 1/4 3rd Grade 240.00
1 1/2 x 3/4 3rd & 8tr. Jtd. EM 380.00
1 1/2 x 3/4 2nd & 8tr. Jtd. EM 390.00
3 1/2 x 3/4 First Grade 400.00
3 1/2 x 2 1/4 2nd Grade 360.00
3 1/2 x 2 1/4 3rd Grade 320.00
Floor Layer Wage \$2.50 hr.

GLASS—
Single Strength Window Glass \$.30 per sq. ft.
Double Strength Window Glass .45 per sq. ft.
Plate Glass, 1/4 polished to 75 1.60 per sq. ft.
75 to 100 1.74 per sq. ft.
1/4 in. Polished Wire Plate Glass 2.35 per sq. ft.
1/4 in. Rgh. Wire Glass .71 per sq. ft.
1/4 in. Polished Wire Plate Glass 2.00 per sq. ft.
1/4 in. Rgh. Wire Glass .64 per sq. ft.
1/4 in. Obscure Glass .40 per sq. ft.
3/8 in. Obscure Glass .64 per sq. ft.
1/4 in. Heat Absorbing Obscure .58 per sq. ft.
1/4 in. Heat Absorbing Wire .86 per sq. ft.
Glazing of above additional \$1.50 to 30 per sq. ft.
Glass Blocks, set in place 3.50 per sq. ft.

GLASS—

HEATING—
Average, \$3.50 to \$4.00 per sq. ft. of radiation, according to conditions.
Warm air (gravity) average \$64 per register.
Forced air average \$91 per register.

MOLES AWARD RECOGNITION TO WEST COAST CONTRACTOR

Stephen D. Bechtel, president of Bechtel Corp., San Francisco, and Charles E. Spencer, president of Spencer, White & Prentiss, Inc., New York construction firm, were honored at The Moles' 12th Annual Award Dinner in New York recently for "outstanding achievement in construction." The award is considered the highest recognition given for service to the construction industry.

In making the Non-Member award to Bechtel, Adm. Ben Moreel, chairman of the Board of the Koppers Co., declared that he was being honored as a "citizen, engineer, contractor, in recognition of his illustrious accomplishments during the war and his notable leadership in the fields of oil refining, pipelines, dams and shipbuilding construction."

The Society, comprising leaders in tunneling and heavy construction work, also presented honorary membership to Gen. Lucius D. Clay, who made the principal address of the evening.

INTERNATIONAL TERMINAL BUILDING RISES AT SAN FRANCISCO AIRPORT

Construction of the new \$6,784,000 San Francisco International Terminal Building at San Francisco's Municipal Airport is progressing according to

schedule, despite somewhat adverse weather conditions.

The Terminal Building forms part of the new terminal facilities at the huge airport and is designed to initially accommodate three million passengers in and out per year, and to ultimately handle ten million passengers per year.

The building was designed under direction of the Public Utilities Commission of the City and County of San Francisco, with G. D. Burr, design engineer; W. P. Day, architect, and Clinton Construction Company, general contractors.

ARCHITECT: Phillip Buckingham, Fresno. Frame and stucco construction. GENERAL CONTRACTOR: Larsen-Ratto Construction Co., Fresno.

How to place telephone outlets to protect home's future beauty

You protect the beauty of home interiors by providing for extra telephone outlets in the plans. Current building practices, such as the reduction in size or omission of inside trim, make future installation of telephone facilities difficult. But concealment of facilities is assured when built-in conduit is indicated in blueprints.

Plan for telephone service where the users will spend most of their time. Low-cost facilities for concealed wiring are easy to install, mean extra client satisfaction. New telephones can be added without running wires along the walls or floor. For free help in planning, call your local Pacific Telephone office, ask for "Architects & Builders Service."

Put built-in telephone facilities in your plans

IN THE NEWS

NAMED TO NATIONAL HOME BUILDERS COMMITTEE

Fritz Burns of Los Angeles has been appointed Chairman of the National Housing Policy Committee of the National Association of Home Builders.

Other Western appointments made by Alan E. Brockbank, organization president, includes Frank Burns, Denver, Colorado, Chairman of the Mortgage Finance Committee; Earl W. Smith, Berkeley, California, Chairman of the Building Methods and Materials Committee; Albert LePrieux, Seattle, vice chairman of the Joint NAHB-Productors

Council Committee; Albert Balch, Seattle, Chairman of the Land Planning Committee; David Bohannon, San Francisco, Chairman of the Committee to Work with Lumber Manufacturers; George Streit, Pomona, California, vice-chairman Small Volume Building Council; and Paul Burkhard, Glendale, California, Chairman of the Regional Vice Presidents' Council.

LOS ANGELES AREA GETS NPA PERMITS

The NPA in Washington has approved construction of 15 commercial projects in the Los Angeles area including the \$11,000,000 Beverly-Hilton Hotel.

Included in the approval was two court houses, a State home in Norwalk, a county parking lot, twenty-three Los Angeles water projects and two sewage projects.

The action releases materials for projects with delivery after July 1st. Demolition, site clearance, excavation and other preparatory work may start at once.

NEW BANK FOR SAN FERNANDO

Work has started on a new bank building for the newly organized Sun Valley National Bank of Los Angeles at 8125 San Fernando Road.

Architect Charles Goldberg has designed the building which will have an all grill facing toward the street with a brick rear and side walls. A large parking lot has been provided with entrances into the bank from either the front street or the rear parking area.

NEW SCHOOL FOR NEWMAN, CALIFORNIA

Bonds have been voted by the people of the Newman Elementary School District, for the construction of an addition to the Newman Elementary School costing \$150,000.

The project designed by Architect William Corlett of San Francisco, will include a combined auditorium and gymnasium and will be of frame and stucco construction.

DEPARTMENT OF METALLURGY SOUTHWEST RESEARCH INSTITUTE

An upsurge of industrial scientific research in the field of metallurgy has brought about the establishment of a department of metallurgy at Southwest Research Institute, San Antonio, Texas, according to Dr. Harold Vagtborg, institute president.

Appointed to head the department is Dr. Robert J. Anderson, who was awarded a Doctor of Science degree by the Massachusetts Institute of Technology, and who has

had 35 years experience in industrial, government and educational fields. The department is undertaking industrial metallurgical research in foundry practice, process metallurgy, and physical metallurgy, in addition to problems in metal economics.

SCHOOL BONDS APPROVED

Voters of the Liberty Union High School District at Brentwood (Contra Costa County) recently approved a special school bond election to raise \$600,000 for the construction of an addition and some remodeling to the Brentwood High School.

Yeung & Lloyd of Albany are the architects.

ENGINEER IS ELECTED

J. R. Newville of Los Angeles has been elected president of the Civil Engineers & Land Surveyors Association of California at the organization's recent annual meeting. He succeeds Leo L. Strecker.

SPEAKS AT FOREST FIRE PREVENTION CONFERENCE

E. T. F. Wohlenberg, vice president and general manager of the Masonite Corp., manufacturing plant in Ukiah (California), and president of the Redwood Region Conservation Council was one of the principal speakers at a joint meeting of the California State Board of Forestry and the California Fire Prevention Committee recently held in Sacramento.

Wohlenberg's subject was "The Dependence of Our Basic Natural Resources upon Protection from Wild Fire."

AMERICAN SOCIETY TESTING MATERIALS

The American Society for Testing Materials has changed its Annual Meeting dates from June 22-26, to June 29-July 3, at the request of the Department of Commerce and State of the Federal Government.

The annual meetings will be held in Atlantic City, N. J.

NEW RIVERSIDE CAMPUS SOON

Release of steel and other critical materials for four key buildings and utilities on the new Riverside campus of the University of California assures the community that classes will open there in the fall of 1953.

According to Dr. Gordon S. Watkins, provost of the Riverside campus, calls for bids and awarding of contracts will proceed immediately.

Thinking of Building?

From our cost records and experience, an advance estimate may be made from decidedly general information. Based on our knowledge of labor and material costs, gained on current jobs, such an estimate may be helpful in determining your construction program.

**ALL TYPES CONSTRUCTION
SAN FRANCISCO • SACRAMENTO**

**SWINERTON & WALBERG CO.
OAKLAND • LOS ANGELES • DENVER**

Authorized for construction are the Physical Sciences Building, Social Science Building, the U.C.R. Library, and the Biological Sciences Building.

**RICHARD WALBERG ON
SOUTH AMERICAN TOUR**

Richard Walberg of the San Francisco construction firm of Swinerton & Walberg, is touring South America with a group of U. S. financial and industrial executives.

He reports progress in architectural design and construction methods is "amazing," particularly the tremendous heights reached by reinforced concrete structures in Brazil.

**SCHOOL BONDS
ARE VOTED**

The San Leandro Unified School District in Alameda county recently approved a special school bond issue of \$4,250,000 for the construction of a new Elementary and a new Junior High School in San Leandro.

Work on the two new buildings will start at once.

**INDUSTRIAL FINISHING
EXPOSITION OF 1952**

More than 100 new products will be shown in the greatest array of industrial finishing services and products ever displayed under one roof at the Industrial Finishing Exposition of 1952 in Chicago on June 16 through 19.

The show will be held in Chicago's International Amphitheatre and is being sponsored by the American Electroplaters' Society, a technical society composed of more than 5,500 men and women.

**SANTA BARBARA
VA OFFICE CLOSED**

The Veterans Administration offices located at 735 State Street in Santa Barbara have been closed and all matters handled by the office are now being cleared through the Los Angeles VA offices, reports L. C. Chapman, manager of the L. A. offices.

Personnel of the Santa Barbara office were given option of transfer to other VA offices or termination of employment.

**BONDS VOTED FOR
HIGH SCHOOL**

The Hayward Union High School District has authorized architects Anderson & Simmonds of Oakland to proceed with plans for the construction of a new High School in San Lorenzo, following approval of a \$3,000,000 school bond issue.

First unit of the new school, which will be of frame and stucco construction, will cost approximately \$600,000.

**ARCHITECT
SELECTED**

Architect Gordon Stafford of Sacramento has been commissioned by the Sacramento Board of Education to design a new Junior High School building for Sacramento.

The new structure will be designed to accommodate 1100 students.

**C. LAWRENCE WARWICK
DIES SUDDENLY**

C. Lawrence Warwick, executive secretary, American Society for Testing Materials, and its administration head since 1919, died suddenly on April 23, shortly after presiding at a dinner in Philadelphia honoring the retiring Treasurer of the Society.

Warwick had been active in the Society since 1909 when he graduated from the University of Pennsylvania in civil engineering.

add customer appeal...

**to any commercial building
with new colors in real clay**

Suntile

MARBLE TAN 563

FAWN 561

Good looks and good taste are important to stores, office buildings, restaurants—in fact, to *any* commercial building.

With the new Suntile color line, you can help assure business success by colors that fit the function of the building and create an attractive, *inviting* appearance.

These Suntile colors are functional. They are softly shaded—scientifically developed to aid lighting, improve employee morale, cut down accidents, as well as give added eye appeal.

Because Suntile is *real clay* tile, repair and maintenance are kept at a minimum and sanitation and cleanliness are easily achieved with soap and water. These are the traditional advan-

tages of real clay tile that bring about great long-run economy. With Suntile, first cost is usually last cost.

NEW COLOR BOOKLET. The new Suntile color line is described in our booklet "Suntile Functional Color Recommendations." This will help you select color for industrial, commercial and institutional buildings on a scientific basis. For your free copy, see your nearest Authorized Suntile Dealer, or write us direct, Dept. AE-6, The Cambridge Tile Mfg. Co., P.O. Box 71, Cincinnati 15, Ohio.

Suntile

MARBLE TAN AND FAWN

Warm colors of unlimited use

Suntile Marble Tan and Fawn are new tones in real clay tile. They are warm colors with a soft grayish tint and slightly deeper reflectance than many of the more conventional tile colors. These are "high style" colors that give soft beauty, good taste and neutrality of background to building interiors. They are easy on the eyes and flattering to furniture or fixtures. They will stand high light intensity without appearing gaudy or distracting. Marble Tan and Fawn were selected by Faber Birren, noted color authority, and developed by The Cambridge Tile Mfg. Co. as part of our new color line.

SUNTILE OFFERS YOU BOTH • BETTER TILE • BETTER INSTALLATION

EDITORIAL NOTES

GOOD OLD DAYS

Home buyers today get a much better value for their housing dollars than home buyers of a generation ago.

Today's new home buyer now takes for granted many items of standard equipment which were either undeveloped or too expensive a few years ago. Luxury fixtures of yesterday are commonplace today. But so gradual and consistent has been the evolution in home improvement and construction that its constant progress is not apparent.

World War II research resulted in many scientific advances and the appearance of many new products which have contributed directly or indirectly to the betterment of today's home.

Today's house is more professionally designed and is being built today by a responsible, progressive home building industry.

The last twenty years has seen the widespread advent of mass produced economy houses and neighborhood development programs, due to the demands of a rapidly expanding U. S. population and the defense program which has hastened the development of streamlined, economic construction methods for low cost housing under private enterprise system and leadership.

The federal personal income tax was adopted in 1913 with rates ranging from 1 to 7 per cent. Today's rates range from 22.2 to 92 per cent. The total tax burden (direct, hidden, federal, state, local) now represents about 35 per cent of the average income.

CHAMBERS BUILD BETTER CITIES

The obligations of local chambers of commerce in building better American cities and towns was emphasized by D. A. Hulcy of Dallas, Texas, who recently completed his term as president of the Chamber of Commerce of the United States, a national federation of more than three thousand businessmen's organizations.

"I cannot remember a time when our chambers were so well managed, so alert and so active. But we need still more active interest by business leaders. We need the service of leaders who personify business as a good neighbor in a town that is growing and developing. We need men who personify the American economic system as a warmly human institution based on individualism and community cooperation.

"There is no community in America that cannot be made a better place to live. The backdrop for it exists. Chambers of commerce have successfully launched hospitals, have created playgrounds, reconstructed school systems, have even built colleges and have actually created cities.

"Initiative and daring are the hallmark of success, and the greatest successes always have been where businessmen were unsparing with their talents in giving community service.

"America did not become the Samson among the world powers by feudal direction from the top down. America is a creation of the bottom-up principle.

"In 1925 the average automobile lasted only 6.5 years and ran about 26,000 miles in its lifetime. By 1948 the average scrapped automobile had run 120,000 miles and was 13.6 years old."

DECENTRALIZED

Governor J. Bracken Lee of the State of Utah, long a crusader for decentralized government, has come up with a suggestion that all federal taxes should be eliminated and that the national government should derive its financial support solely from assessments against the forty-eight states of the union, and territories, on a basis of per capita income.

Gov. Lee admits his proposal is a long range one, but that citizens should make an initial start towards its eventual accomplishment by reducing demands for government spending.

"Perhaps unwittingly but nevertheless very really, we have become the silent partner of a few greedy, power-hungry, political adventurers seeking personal power and gain," Gov. Lee contends, however, in his moral crusade against corruption and centralized government, he fails to offer a formula for localized representatives of the people who might bring their State to the verge of profound deterioration in moral standards of government.

President Truman's seizure of the steel industry will probably go down in history as one of the most high-handed acts committed by an American President.

CORRECTION

In connection with the illustrated article entitled "Churches Can Be Different", appearing in the April issue of ARCHITECT & ENGINEER magazine, in which a number of outstanding Church structures of the West Coast were featured, an error in architectural credit appeared.

The caption on Page 12, and reference in the story on Page 16, should have read Lloyd Wright and not Frank Lloyd Wright. Architect Lloyd Wright is the son of architect Frank Lloyd Wright, and was the architect for the Wayfarers Chapel, Portuguese Bend, Rancho Palos Verdes, California.

NEWS and COMMENT ON ART

CALIFORNIA SCHOOL OF FINE ARTS SUMMER SCHOOL

Registration for the California School of Fine Arts, 800 Chestnut Street, San Francisco, summer session opens June 30th. The session closes August 8th.

Of special interest to artists and laymen alike will be a course entitled Visual Communications which will be given by school director Ernest Mundt.

Another scheduled course is Arts in Architecture, a cooperative workshop sponsored by the A.I.A., Artist's Equity, and the CSFA.

CALIFORNIA PALACE OF THE LEGION OF HONOR

Thomas Carr Howe, Jr., director of the California Palace of the Legion of Honor, Lincoln Park, San Francisco, calls attention to the new exhibition of prints, Man At Work, which is currently being shown and presents man in the pursuit of his various trades and occupations.

The exhibition has been arranged into five sec-

tions, The Professional Man, The Tradesman, The Salesman, The Agriculturist, and Diverse Pursuits. Supplemental to the exhibition are additional prints in the Study Room of the Achenbach Foundation, adjacent to the Foundation's Gallery.

This exhibition of Man At Work is to be followed by a presentation on Approaches To Leisure which will open at the Gallery on July 19th.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is presenting a number of exhibits and events for June including:

Paintings by Gyorgy Kepes, Paintings by Erle Loran and Jack Shadbolt, Studies For A Chapel by Ernest Born, Landmarks in Photography an American Federation of Arts Exhibition, Quebec Painters, and Jewelry by Peter Macchiaroni, Vera Allison and Irena Bryner.

The special Exhibit of The Art of Henri Matisse will be continued through July 6th.

Included among the special events is the Sun-

JOINT INFORMATION COMMITTEE

AMERICAN INSTITUTE OF ARCHITECTS and THE PRODUCERS COUNCIL, INC.

At the meeting held April 10th in Cambridge at the Massachusetts Institute of Technology a progress report was submitted to the Subcommittee on the Card File or Loose-Leaf Specification Service. The ARCHITECT AND ENGINEER has again been given the opportunity of releasing this report to the construction industry on the West Coast and will quote from the minutes of the Joint Committee of The American Institute of Architects and The Producers' Council, Inc.

"In the absence of Mr. Carl J. Ebert, the secretary distributed copies of the Preliminary Analysis by the Construction Specifications Institute, Inc., of a Proposed Specification Service being presently considered by the JOINT COMMITTEE OF THE AMERICAN INSTITUTE OF ARCHITECTS AND THE PRODUCERS' COUNCIL, INC.

"The report was reviewed in detail by the committee followed by a general discussion as to the feasibility of the proposed service, and as to the financing involved in its preparation, distribution, continuing review and revision.

"While it was the feeling the subject required further study and amplification, before making a report to the board of directors of the Institute, the following motion was unanimously adopted:

"Resolved: That the thanks of The Joint Committee be expressed to those responsible for the preparation of the Preliminary Analysis by the Construction Specifications Institute, Inc., of a proposed specification service being presently considered by the JOINT COMMITTEE OF THE AMERICAN INSTITUTE OF ARCHITECTS AND THE PRODUCERS' COUNCIL, INC. which the committee believes describes a comprehensive and feasible type of a specification service of value to the Architect. The Joint Committee recommends the report be amplified to include, in addition to the basic material contemplated by the service, reference to supplemental data as furnished by Trade Associations and individual Producers of building materials."

"The Joint Committee further recommends that sample cards, or Loose-Leaf pages, be prepared by the special sub-committee to illustrate basic specification material related to a typical product,

with cards or pages to illustrate accompanying specification data, related to the same material, as furnished by a Trade Association and an individual Producers of such material.

"The Joint Committee is of the opinion it may be seriously questioned whether the allotment of funds to underwrite the preparation of the basic specification material could be secured from the representatives of industry; it believes, however, that Trade Associations and individual Producers would be inclined to enter their specification material, at a price, in an established Specification Service.

"The Joint Committee recommends the special subcommittee restudy the probable costs involved in the preparation of the basic material, its distribution and continuing review and revision.

"Having determined such costs and the charge to subscribers of the Service, both as to the original basic material, and a continuing yearly charge, the committee suggests that a survey be conducted by The Institute to determine the number of Architects who would subscribe to the Service.

"In this connection it might be determined how many subscribers would make an immediate partial or complete advance payment, as a means of financing, in part at least, the preparation of the basic material.

"Professor Voss expressed the opinion construction techniques are moving so rapidly as to make requirements difficult and he would publish a format, and let industry formulate recommended specifications."

The above resolution is extremely encouraging since it shows definite and continued progress towards some final constructive action in establishing a Uniform Specification Procedure. The most encouraging aspect is the meeting of the financial question and pointing out that a realistic answer must be found to initiate this service. Also the realization that producers and trade associations should be allowed to provide material is an important step. Summing it all up from the reports to date it seems that now there is positive action being taken and the program will be an actuality.

NOTE: This news space is being contributed by ARCHITECT & ENGINEER Magazine to the JOINT INFORMATION COMMITTEE representing the Northern California Chapter of The American Institute of Architects and the Northern California Chapter of the Producer's Council, Inc., and is available to this Committee for the purpose of bringing to the attention of leaders within the Construction Industry various phases of the Architectural profession and building materials industry procedures for general consideration and comment. Your "ideas" and any suggestions for: the better pooling of thoughts along these lines should be sent to "Joint Information Committee, c/o The Architect & Engineer, 68 Post Street, San Francisco," where they will be immediately forwarded to proper committee members.

ENGINEERING FEATURES

NEW OFFICE BUILDING

METROPOLITAN LIFE INSURANCE CO.

San Francisco, California

By HERBERT L. LYELL

Designer with H. J. Brunnier, Consulting Engineer

The Metropolitan Life Insurance Company Building in San Francisco is composed of a series of additions to a small central building which was built facing Stockton Street in 1909. The first addition built in 1913 consisted of two identical wings on the north and south sides of the original building. The second addition made in 1919 was composed of a wing along Stockton Street on the north side of the existing structure. The third addition now known as the Pine Street wing was built in 1929 paralleling Pine Street to the east of the original work. The newest and fourth addition, consisting of a seven story wing along California Street and a two story portion in the central court area, is now under construction.

The new California Street wing is the same size and identical in exterior architecture to the Pine Street wing. It is a steel frame structure with Robertson Decking on all floors except the first which is reinforced concrete. All columns are fireproofed with concrete and all interior beams and girders are fireproofed with vermiculite plaster. Spandrel beams are poured in the concrete walls.

The two story portion in the court area is of flat slab construction with bays twenty-eight feet three inches by twenty-nine feet six inches. The bottom story or basement is to be used as a garage. The second story is to be used as a storeroom for old records and was designed for two hundred-fifty pound per square foot live load. The roof of the

court area was designed for a garden floor. A garden similar to that which existed before construction was started is to be replaced on top of the court building. Three and a half feet of earth is to be placed on the roof for the planting. At the east end of the court seven feet of earth will be placed so that trees can be planted.

There were no particularly unusual or difficult problems connected with the superstructure of the court area or of the steel portion of the building other than those caused by the heavy loads due to the earth fill and the heavy moment connections required in the steel frame to satisfy the requirements of the present San Francisco Building Code insofar as the lateral loads are concerned. The difficulty encountered in the moment connections was caused not so much by their size as by the fact that the architecture had to match the existing. The existing portions of the building were designed with very little provision for lateral loads and had only nominal moment connections. Since the architecture had to be the same and the terra cotta backing was mostly brick on the early work there was very little clearance between the steel frame and the exterior surface of windows, etc. It was necessary to maintain these same clearances and still devise connections adequate to take the stresses stipulated by the code. There was no possibility of any wing plates or knee braces so it was necessary to use split WF sections. Although it was necessary to use rather large tees there was no trouble except at the fifth floor where the columns were set in. Here a complicated connection was used.

FOUNDATION

The main problem encountered in design and construction was that caused by the relative position of the footings of the old and new portions of the building.

The terrain of California Street is rather steep between Stockton Street and Grant Avenue. The fifth floor of the new wing is level with what was called the second floor of the existing building. However, there were two basements and a boiler room below this second floor. The basement floor of the new wing and court was set at elevation one hundred-eight feet ten inches which is approximately at the street level at the east end of the building where the garage entrance is located. The boiler room of the existing building is at elevation one hundred thirty-one feet ten inches or Thirty-three feet higher than the new basement floor. The highest footings under the existing building along the east wall were at elevation of one hundred thirty-five feet six inches. The elevation of the new footing is one hundred-six feet two inches or twenty-nine feet four inches below the existing footings. These footings at elevation one hundred thirty-five feet six inches were under the Stockton Street wing of the building. The footings under the first two portions of the building were even higher but they had already been lowered by underpinning.

When the Pine Street wing was built in 1929 the footings in the existing building adjacent to the new construction were underpinned so that the bottom of the underpinning was stepped progressively from the low point along Pine Street to a

point where the elevation of the existing footings was reached. That is at elevation one hundred thirty-five feet six inches. This underpinning consisted of a massive concrete wall with a minimum thickness of two feet six inches between footings and a section the full size of the footing directly under them. It was designed as an L shaped retaining wall with the two projecting outside the building. The problem faced in the new work was how to hold the existing building in place both during and after construction of the new. The profile of the existing footings showed that considerable pressures would be involved and that some thoughtful work was necessary. We believe mere underpinning would not do the job. The underpinning that was already placed at the south end of the building precluded that possibility.

This underpinning would have to be carried farther down. It was subjected not only to a vertical load but also to a lateral pressure from the earth under the building and the surcharge on this from the interior footings. If underpinning was placed under that already existing it would be necessary to develop some kind of a moment connection between the two to take care of this lateral thrust, a difficult and costly procedure.

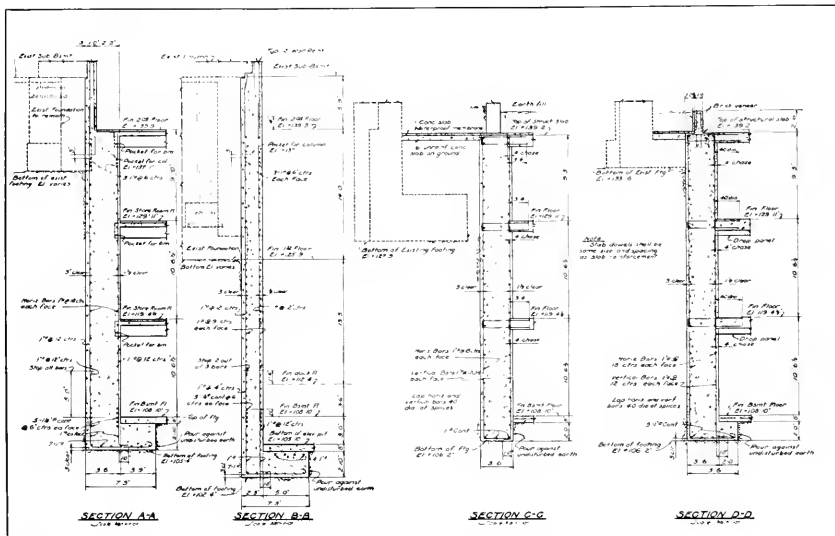

However, if the material under the existing footings could be kept in its undisturbed state and could be supported laterally against sliding into the new excavation the whole problem would be solved. Consequently, it was determined that a retaining wall just outside of the toe of the original underpinning would hold the soil in place and would adequately protect the old structure.

The set-up for such a retaining wall was very good. Along most of the excavated area was a flat slab court construction. In this area the story heights were only ten feet six and one half inches and the clear distance between slabs was only nine feet four and one half inches. These slabs were considered good supports for the wall as they were made fourteen inches thick. They in turn were supported at each edge of the court area on twelve inch walls which ran the full length of the building, at right angles to the proposed wall. This gave a supporting wall approximately one hundred fifty feet long on each edge of the slab. The portion of the wall of the California Street wing was supported by a seventeen and one half inch wall on California Street and two twelve inch walls at the elevator shafts and the joint wall at the court area. The zig zag shape of the wall itself also furnished some support. Thus, there was adequate support for a retaining wall and as the vertical span between slabs was not large the moments induced in the wall were not so large as to prohibit its use.

The term soil as used for the material at the site was used rather loosely as the material under the building was made up of a decomposed serpentine mixed with clay.

In its natural state, while it remained damp, it was quite cohesive and would stand on a vertical face. However, if it was exposed to air and was allowed to dry out it became loose and crumbly. This caused a construction problem of how to make the excavation and pour the wall without leaving

(See Page 24)

NEW BUILDING VIEWED FROM SIXTH AVENUE AND "A" STREET

San Diego Federal Savings AND Loan Association

SAN DIEGO, CALIFORNIA

H. LOUIS BODMER, A.I.A.
Architect

This new ultra modern building, with a frontage of one-hundred fifty feet on Sixth Avenue and one-hundred feet on "A" Street going through to Seventh Street, is of large span concrete construction reinforced with 920,000 lbs. of reinforcing steel and 6,500 cubic yards of concrete.

The total building area is 96,000 square feet, equivalent in space to a 13-story building seventy-five by one-hundred feet, and the unique circular depositors' counter which is the only one of its kind in the nation, is served by eleven tellers.

Two drive-ins permit the public to enter the building on Sixth Avenue with a straight through exit to Seventh Avenue. There is a short term parking area on the first floor and also in a full basement.

Three modern vaults have been installed by the San Diego Federal, one with a safety deposit box

section protected by a 30,000 pound circular stainless steel door two feet thick.

There are three elevators from the 120 car basement garage serving the four-story and mezzanine building. The banking room on the first floor has a richly designed terrazzo floor with matched walnut banking counters and wall paneling. A circular stairway and the mezzanine floor have a rose tinted sandblasted plastic railing. The interior approach wall is richly hand painted with three large color murals depicting early California and San Diego history. Warm colors predominate on the banking counters, inlaid terrazzo, green carpets, and rubber floors.

While the basement garage and banking quarters are completely mechanically air-conditioned, the second and third floor office-loft space has been

THE PRESIDENT'S OFFICE

provided with a forced ventilation system. Ceilings and walls are acoustically treated in a harmonious array of colors and indirect lighting. The mezzanine floor, also occupied by San Diego Federal offices, serves the mortgage department with an adjoining richly furnished lounge and rest rooms for employees.

The main entrance to the banking business of the San Diego Federal Savings and Loan Association is located on the Sixth Avenue elevation, while the second and third floor executive and general offices have their separate entrances on "A" Street and Seventh Avenue.

The exterior of the building is a happy culmination of green Verde Antique marble, aluminum windows and fin treatment fitting into the colored mica exterior concrete walls.

Planned, designed and supervised by H. Louis Bodmer, A.I.A. architect of San Diego, the building has the distinction of being the largest and most modern building to be constructed in downtown San Diego during the past twenty-five years.

Below is a view of the Employees' and Guests' lounge room which for general convenience has been located on the Mezzanine floor.

Pushing On With Sydney Town Plan

New South Wales, Australia

By CECIL SLOCOMBE

The Sydney, Australia, \$11,200,000 city and suburban improvement plan was adopted by the New South Wales State Parliament last year and is now being put into force with the backing of law behind it.

Forty municipal councils banded together into one authority will carry out the Sydney town planning scheme, which is considered unique because no other similar scheme has yet been implemented where a large number of bodies have set up their own joint authority. Further, in most similar town planning schemes, the controlling body acts in advisory capacity, not as a legal force.

The New South Wales legislation is based on

the amended version of Britain's 1932 Town and Country Planning Act. Most of the \$11,200,000 cost immediately envisaged will be used in acquiring land to be reserved indefinitely for roads, railways and other uses.

Sydney is Australia's biggest city, main port, international airlines terminal and a great industrial and cultural centre. The population of the Sydney urban area is about 1,750,000, and the population of Cumberland County, the roughly 1,000,000 acres embraced by the plan 1,850,000.

The plan is based on an assumed increase in the overall population of the area to 2,225,000 by the year 1972. On present indications this estimate is

PARK LAND ON HARBOR FORESHORES IS BEING EXTENDED UNDER PLAN

Southern approach to Sydney Harbor Bridge, one of main traffic arteries. Future arterial roads built under the planning scheme will all be "express ways" and protected from intersecting traffic.

conservative, but authorities are trying to encourage decentralisation and hope that population growth will be no greater than about 400,000 in the next 20 years.

Sydney was founded 163 years ago, but no cohesive planning was attempted until 1945, when the State Government passed legislation setting up a town planning framework for Sydney, Newcastle and other cities and towns in New South Wales. The first concrete result from this move was production of a "master plan" covering Sydney and environs. It is this "master plan" which has been approved, with modifications, by New South Wales State Parliament.

The Cumberland County Council, the State's principal planning authority, points out that despite its magnificent setting, general high standards of

development and all-round prosperity, the county suffers many defects, the worst being:

Undesirable concentration of employment in the city of Sydney, causing a burden on transport facilities.

Traffic congestion in city and suburbs.

Residential development, lacking amenities and open space, spread out indiscriminately over extensive areas, without proper relation to employment and other factors.

These and other defects will be remedied over the years. One of the more important positive features of the scheme will be the establishment of a green belt around the urban development of the metropolitan area. The green belt will provide a distinct, permanent line between town and country, and retain some portion of the county at a higher

(See Page 38)

**DISTINCTIVE
APPEARANCE**

This home in the Berkeley hills, takes a distinctive appearance if viewed from the down-hill side.

WILLIAM CORLETT

A. I. A.

ARCHITECT

CALIFORNIA HILLSIDE RESIDENCE

BERKELEY,
CALIFORNIA

*Photographs by
Rondal Portridge*

ABOVE—Porch, overlooking Bay

BELOW—House from street level

HILLSIDE RESIDENCE . . .

Of particular interest, in the wake of headlines reporting houses sliding down hills during the heavier-than-average rainy season in California, is the construction method used by Architect William Corlett in the building of his own hillside residence in Berkeley.

Corlett adapted a long-established engineering principle that has been used successfully in building and bridge construction, but, until recently, has not been utilized for residence construction. The method is known as a "pier-type foundation." Instead of the conventional concrete retaining wall, the house is supported by foot-square piers penetrating through the top soil to firm bearing.

With this type of foundation, water is not restrained but washes through in the spaces between the piers. Thus, there is no backing up of water against retaining walls to cause the entire foundation to slide.

The house actually rests on beams of reinforced concrete 8" wide and 24" high, laid on the ground above the nine piers, which, in this instance, reach down 7' to solid bearing.

Corlett has solved more than the safety problem with this foundation method. He has also demonstrated that hillside construction need be no more expensive than building a home of equivalent size on flat ground. The use of piers cut concrete use by about 50%. Add this material saving to the savings due to the lower cost of hillside lots considered "unbuildable" and the net cost of the house amounts to no more than the same size house on a level lot. The Corlett residence, an 1800 sq. ft., three-story structure, cost \$11 per square foot. For this amount the architect achieved a remarkably big share of living comfort—six rooms with two baths, a 45' sun deck, a sun porch, carport, two fireplaces, redwood plywood interior throughout and a spectacular 17' high all-glass stairwell that is the showpiece of the neighborhood.

There are interesting economies that made possible this tailored-to-order product for a price no greater than "mass-produced" houses of similar size. Instead of the usual 1" x 8" sheathing for floors and outside walls, laid diagonally, Corlett used a ½" plysored (foundation grade plywood) in 4 x 8 panels, for walls and rough flooring. The

Contrary to usual practice the roof pitches with the slope of hill to cut off sky glare from the living space view areas. The kitchen is located in far corner with a large view window.

... HILLSIDE RESIDENCE

Floor Plans emphasize livability and space utility

HILLSIDE RESIDENCE . . .

result is a structurally stronger frame and a 20% cut in material and labor costs.

Instead of finishing the ceiling on the upper floor, Corlett cut costs and actually increased the attractiveness of the interior by using 2" x 8" tongue and groove white fir beams and leaving them exposed.

To bridge the steep slope from street level to house, Corlett constructed a carport which doubles as garage and entry-way.

Contrary to the contemporary practice of sloping the roof skyward on the view side, Corlett has his roof parallel the slope of the hillside with a 5' overhang on the western view side to cut out sky glare and frame the view to greatest effectiveness. And he has brought the overhang *into* the house to strengthen the relationship between interior and exterior and achieve a pleasant effect of balance as well as an attractive break in the interior ceiling line.

This interior overhang is utilized to accommodate the metal ducts of the "air wall" warm air heating system, hiding them from view and at the same time achieving the most effective distribution for

the system. The grilles set in the overhang blow warm air along the surface toward the windows, thus heating up cold air right at the source of the greatest heat loss. (This heating system requires no floor space for fixtures. Additional registers are set in the opposite wall at floor level and furniture can be placed in front of them.)

The overhang also serves to house indirect lighting tubes and a decorative display of philodendron plants.

Connecting the street-level living room, dining room and kitchen with the downstairs bedrooms, sun deck and porch, is the stairwell, which is an outstanding example of what can be done to make a utilitarian space decorative. The 17' high area is glass enclosed from floor to ceiling on north and east sides to take full advantage of the view of San Francisco Bay. Planting boxes line the stairs on the glass-wall side. The stair railing on the other side is formed of a 1½" steel pipe, enamelled watermelon red, and connected with the floor by a lacing of woven copper cable. A custom-designed lighting fixture is suspended from the ceiling. The

Stairwell corner is enclosed in glass and affords breathtaking view of Bay . . a noteworthy example of how to give decorative interest to space performing a utilitarian function.

copper shade is pierced with $\frac{1}{8}$ " round holes to give soft, diffused light over the entire area, and the globe throws direct light on the steps and landing. Three small bulbs at the top of the fixture light the ceiling without casting a shadow of the shaft. The stairwell is carpeted in chocolate brown and the one non-glass wall is painted a deep forest green.

Room Dimensions and Decorations

Living room—18' x 24'. West wall, glass; east wall, redwood plywood. (A radio cabinet with bleached oak frame and walnut stained doors, stands against this wall.) North wall, Sonoma fieldstone fireplace and bookcase backed with sheet rock painted dark green. The entrance to the dining room is at the left of the fireplace wall and the corridor leading to the front door and stairwell is at the right. (A slab of Travertine—marble chips and black concrete cast and polished—juts out from the fireplace floor. This material is identical to marble in appearance, but heat resistant, and adds richness in combination with the fieldstone.) Flooring is oak.

RIGHT: Copper light fixture, perforated for light diffusion, is feature of stairwell.

BELOW: Sun porch protected by chain link fencing provides children's play area.

HILLSIDE RESIDENCE . . .

Dining room—12' x 15'. West wall glass; other walls redwood plywood. Old fashioned marble topped sideboard with gray finish; old-fashioned driftwood gray dining room table and chairs.

Kitchen—9' x 15'. All cabinet work, mahogany. There are two ovens, one on top of the other—the second a convenience for keeping food hot—and drawers under the stove for pots and pans. The marble-topped table and old-fashioned drug store type wire chairs which have been copper plated and fitted with walnut plywood seats, form a breakfast nook arrangement in front of the picture window on the west wall. Walls to the north and west are painted yellow and the refrigerator is painted black.

Upstairs bath—Two walls red; two walls and ceiling gray; red rubber tile floor. (Note: Flush valve type toilets are used in both bathrooms, wall hung to save space and eliminate cleaning problems.)

Master bedroom—12' x 18'. West wall, picture window and entrance leading to sun deck. North wall, Italian white marble fireplace; remaining wall painted firehouse red. Each wall and ceiling, gray. South wall, with entrance to sun porch, metallic gold. Floor, black and red marbelized tile.

Children's bedroom—13' x 21' (can be divided into two rooms when young daughters are older). West wall, picture windows and entrance to sun deck. Other walls, redwood plywood. Ceiling, sky blue; floor, turquoise blue asphalt tile.

Bath—Two walls, chocolate brown; two walls and ceiling, cadmium yellow; green rubber tile floor; light green fixtures.

Laundry—Located under stairwell on bedroom floor.

Sun Porch—9' x 18' off south end of master bedroom. Sun deck—6' x 45'—full length of house on west, protected by 3' high chain link fencing.

Decorative center of interest of view-window bedroom is the marble face of the fireplace, a relic taken from the old family homestead.

RIGHT: Roof overhang continues into living room to emphasize outdoor - indoor relationship and afford interesting break in the ceiling line, also accommodates ducts of air-wall heating system.

ABOVE: Slob of stone forms floor of fieldstone fire place in living room with large glass windows affording unobstructed view of city and Bay . . . looking towards the West.

RIGHT: Mahogany cabinet work lines wall of kitchen . . . the breakfast space is by the view window.

ENGINEERING - NEW METROPOLITAN LIFE OFFICES

(From Page 9)

the face of the bank exposed too long. Shoring and bracing of the wall until the slabs were poured was, of course, a problem no matter how the wall was built.

At first it was thought that it would be possible to excavate a good deal of the material on the east side of the site working toward the existing building. Of course, a beam sufficiently wide to support the existing building would be left so that there would be no tendency whatever for the material under the building to slide or be dislodged. After this beam had been cut down to its minimum width the procedure was to be altered to this event:

A narrow trench of ten or twelve foot width or possibly as many as three of them would be dug simultaneously, normal to the face of the existing building and to the full depth of the new footings. This trench was to be carried up to the face of the new wall. As soon as the material was exposed and the cut was trimmed it was to have been given a coat of gunite two inches thick to seal it from the air and consequent slacking. Then a section of the wall was to be formed and poured in each of these trenches. Before the next trenches were dug the wall sections already poured would be shored-up so that they would stand until the slabs were in place.

The retaining wall was designed with this method of construction in mind. Horizontal bars were kept to a minimum so as to facilitate the connections between the different sections of the wall. Of course, a minimum of steel still meant plenty of bars for a wall of this size. The wall as originally designed was two feet thick with an L shaped footing six feet wide.

When the contractor was chosen and work was to be started the contractor thought that the method of construction was too risky and unorthodox for them. It is not often you find a contractor more conservative than engineers but such was the case here.

The construction procedure outlined was too risky as they saw it to cover the existing building against damage during the construction. So a more conservative and more expensive method had to be used. At first they were holding out for underpinning all of the footings adjacent to the new construction but were finally convinced that all of the lateral pressure, of which there was plenty, would have to be taken by the wall anyhow and that it was a simple enough matter to make the wall strong enough to take the surcharge as well. So it was decided that the wall would be built as originally designed. That is just outside of the toe of the existing underpinning. Instead of excavating by trenches as described, the work was to be done

by sinking shafts down to the footing elevation. This was all hand work and although it was less hazardous than the other method it certainly was more costly. Under this new scheme a two foot thick wall didn't make much sense. There certainly was no sense in digging a shaft only two feet wide and some thirty-five feet deep. It also didn't make much sense to dig a wider hole and then have to form around the cribbing to pour a two foot thick wall. Considering the construction procedure involved, three feet six inches was determined to be about the right width for the wall; the hole being a little wider because of cribbing, etc. Since it was easier to pour the hole the full width and much easier to place the steel and work in the shaft, the wall was redesigned to take advantage of the three foot six inch width. This, of course, cut down considerably the amount of steel required. It also erased the possible skepticism in some minds that two foot wall was adequate although it was so proven by calculations using any recognized method of figuring soil pressure and surcharge.

The wall was laid out in a series of blocks eight feet long. The steel was detailed for each block and the horizontal bars were projected from the block so that the bars in the next block could be welded to them. When the closing blocks were poured the steel was cut to exact length and welded on each end. Here again in this wall the horizontal steel was kept to a minimum so that there would be as little welding as possible. The horizontal bars were one inch square and were placed at eighteen inch centers in each face of the wall. This is just a little better than twenty-five one hundredths of one per cent.

The shafts were dug three at a time and there were three blocks left between each shaft so that every fourth block was a closing block. As soon as a shaft was dug the side next to the building was gunited to protect the exposed material from the air. Each block was poured continuously from bottom to top. Each block had a vertical shear key the full height. Where the slabs framed into the wall a chase was left and dowels were placed in the wall so that they could be bent out into the slab.

While the blocks were being poured, excavation of the rest of the site had been completed, except for a portion next to the building that was used to support the wall while it was being poured. As soon as the wall was completed this last portion was removed in sections. As each section of earth was removed the exposed wall was supported by steel shores. The shoring was placed on approximately 12 foot centers. It consisted of two steel struts from the wall to a concrete pad poured in such a way that the pads were clear of the build-

ing column footings. The struts supported the wall at two different elevations. The low one was placed so that it hit the wall just above the first floor. The high one was placed two feet six inches above the garden floor. These struts ran right through the flat slabs but no pockets were left for their removal. Wherever the slab steel hit the struts it was cut-off and welded to the strut on both sides. The slab was poured solid around the strut. The struts will be cut-off about three fourths of an inch inside the surface of the slabs and then the slab will be patched at these points.

Harry A. Thomsen and Aleck L. Wilson are the architects for the building. H. J. Brunnier is structural engineer. Cahill Brothers are the general contractors and Ben C. Gerwick Inc. did the underground work and excavation for the wall.

CONSTRUCTION COMPANY EXPANDS IN ORGANIZATION AND QUARTERS

Expansion of the well known Haas Construction Company into the new firm of Haas & Haynie has been recently announced by Edward T. Haas, head of the new organization, with opening of offices at 275 Pine Street, San Francisco.

EDWARD T. HAAS
General Contractor

Company, becomes a general partner, and Leo S. Gosliner, an engineering graduate of the University of California and well known in the construction estimating field for the past twenty-five years, becomes chief estimator of the new organization.

ROBERT M. HAYNIE
General Partner

The new offices of the company occupy the entire second floor of the two story building opposite from the San Francisco Stock Exchange, Sansome and Pine, and comprise approximately 3000 sq. ft. of floor space.

Robert M. Haynie, well known in the construction industry throughout the West and for the past four years assistant to Richard Walberg of the firm of Swinerton & Walberg

The new offices of the company occupy the entire second floor of the two story building opposite from the San Francisco Stock Exchange, Sansome and Pine, and comprise approximately 3000 sq. ft. of floor space.

The entire floor has been remodeled to meet the general needs of the construction firm and to offer a convenience to customers. Provision has been made for separating the division of engineering,

estimating division, accounting department, and executive offices into individual operations.

LEO S. GOSLINER
Chief Estimator

A portion of the lobby has been set aside for the use of sub-contractors with special provision for display and filing of plans and specifications. Telephone outlets are also available, with connections to any division of the firms, enabling users of the sub-contractors room to confer with engineering, estimating, accounting, and executive personnel with a maximum of efficiency.

An attractive street entrance and stairway serves as an introduction to the second floor lobby where mahogany plywood partitions and obscure glass in functional design serves to individualize each department, yet assures compact unity in general operations.

The company is one of the older construction firms on the Pacific Coast and traces its beginning back to 1898 when Edward Haas, father of the present company head, formed his first construction organization for dredging and heavy construction work in California and the West.

Recently the firm operated under a partnership of Haas & Rothschild, an activity now in the process of dissolution.

Edward T. Haas, also a civil engineering graduate of the University of California, is head of the firm which has participated in construction contracts amounting to more than \$100-million dollars.

Some of the present projects under construction by the firm include work for the Pacific Telephone & Telegraph Company, International Paint Company, American Airlines, White Motor Company, U. S. Navy, City of Pacific Grove, and the Archdiocese of San Francisco.

CLASSIFIED ADVERTISING

Do YOU want to hire, buy, sell, rent, find, lose, and otherwise transact business with others in the Construction Industry? If so, your best bet is a CLASSIFIED ad in ARCHITECT & ENGINEER magazine.

SELL that used equipment at a good price; secure competent employees; buy good used equipment; obtain information on wanted materials, etc.

EDWARD C. KEMPER ARCHITECTURAL AWARD GOES TO BOSTON ARCHITECT

William S. Parker, F.A.I.A., Boston architect, planner and consultant on contract procedure, was given the Edward C. Kemper Award from The American Institute of Architects at the annual AIA convention in New York.

The award is given annually for outstanding contributions to the architectural profession and

was established in 1950 in honor of Edward C. Kemper, executive director of the A.I.A. from 1914 to 1948.

Parker was born in Boston in 1877, became a member of the A.I.A. in 1908, a Fellow in 1916, and was its secretary from 1916 to 1923, and vice president in 1923-24. From 1930 to 1932 he was president of the Boston Society of Architects.

SAN DIEGO CHAPTER

The regular May meeting was devoted to a consideration of "Interior Decorating" with Mrs. Virginia Stewart McLellan, president of the Southern California Chapter of the American Institute of Decorators, the principal speaker.

Among guests attending the meeting were California State Senator Fred H. Kraft, and California State Assemblymen Frank Luckel and Ralph R. Cloyd.

A number of committee appointments were announced by President Louis A. Dean.

NORTHERN CALIFORNIA CHAPTER

President F. Joseph McCarthy has called members' attention to the annual Marin Art and Garden Fair scheduled for opening on July 4th in Ross, during which an opportunity is given for architectural exhibits. The event is one of the outstanding held in the Bay Area each year and is attended by persons from all parts of the nation.

Chapter members have been asked to exhibit in the Associated Home Builders of San Francisco, the Northern California Electrical Bureau and the Gas Appliance Society of California Annual Exhibit schedule to open in the San Francisco Civic Auditorium from September 27 to October 5.

mittee represented the architectural profession at
a conference of newspaper editors at Stanford
University on June 20th.

SOUTHERN CALIFORNIA CHAPTER

Ernest R. Geddes, Assemblyman of the 49th
California District, spoke at the June meeting on
the subject "Our Expanding Community" and
pointed to a number of important state-wide devel-
opments learned through his being a member of
the California Legislative Interim Committee on
Highways, Streets and Bridges, Public School and
Legislative Process, and State and Local Taxation.

Appearing on the same program was Roger W.
Jessup, Supervisor of the Fifth Supervisorial Dis-
trict, and Chairman of the Board of Supervisors,
Los Angeles City and County, whose subject was
"County Government."

OREGON ARCHITECT AWARDED LEWIS TRAVELING FELLOWSHIP

Marvin Witt of Portland, Oregon, graduate of
the University of Oregon school of architecture and
allied arts in June 1951, has been awarded the Ion
Lewis Traveling Fellowship for 1952, according to
dean Sidney W. Little of the art school.

Witt will leave for Europe this fall for a year's
study of methods used in designing structures for
the housing of juvenile delinquents.

Since graduation Witt has been affiliated with
the architectural firm of Lawrence, Tucker and
Wallman of Portland.

AIA FELLOWSHIPS GRANTED TO CLARK AND JACOBBERGER

Birge Malcolm Clark, Palo Alto and member of
the Northern California Chapter of the AIA, and

Grancis B. Jacobberger of Portland, Oregon, and
member of the Oregon Chapter, AIA, have been
advanced to fellowship in The American Institute
of Architects at the New York convention.

The fellowship's were among some thirty-nine
granted architects throughout the nation, and re-
presents the highest membership granted by the In-

STRUCTURAL ENGINEERS ASSOCIATION SOUTHERN CALIFORNIA

A most interesting program was arranged by officials of the U. S. Naval Civil Engineering, Research and Evaluation Laboratory at Port Hueneme for the meeting on June 4th.

Demonstrations were conducted on a number of projects with executives in charge giving descriptions of the work being undertaken.

Following the afternoon field demonstration, dinner was served in the Officers Club with Dr. F. E. Lowance, Technical Director of NAVCERELAB, speaking on the subject "Problems Concerned with Directing Research and Development Programs."

New Members recently announced include: Jack M. Fratt, Member; Henry L. Ebright, Affiliate; Vincent R. Bush and Walter Bedke, Associate's.

There will be no regular meeting in July or Aug., however, the annual Field Day will be observed Aug. 8, at the Oakmont Country Club.

THE FEMINEERS

The Femineers, wives of members of the American Society of Civil Engineers, and Structural Engineers Association of Northern California, celebrated their Second Anniversary Party with a Smorgasbord Luncheon at the El Nido Rancho in Lafayette on May 21st.

Mrs. Eric Moorehead served as Program Chairman, with arrangements for the luncheon in charge of Mrs. August Waegemann.

WASHINGTON SOCIETY PROFESSIONAL ENGINEERS—SEATTLE CHAPTER

The Seattle Chapter of the Washington Society of Professional Engineers held their regular monthly meeting in the Engineers Club, Arctic Building, Seattle, on May 22.

Principal speaker was Dr. M. Shelby Jared, medical director of the King County Service Corporation. His subject was "The Professional Side of Medicine."

AMERICAN SOCIETY OF MILITARY ENGINEERS—SAN FRANCISCO POST

"New Occasions Teach New Duties—The Role of the Engineer in a Dynamic World", was the subject of a talk by Dean Morrough P. O'Brien, College of Engineering, University of California, Berkeley, at the Presidio Officers Club in San Francisco on June 12th.

Starting as a Civil Engineer in 1925, Dean O'Brien, College of Engineering, University of California, Berkeley, at the Presidio Officers Club in San Francisco on June 12th.

Starting as a Civil Engineer in 1925, Dean O'Brien began his teaching career at Purdue Uni-

TABLE TOP MEETING

The Annual Table Top display was held on Wednesday, May 22, in the Terrace Room of the Fairmont Hotel, San Francisco. About fifty-five member companies sponsored displays that were reviewed by about five hundred invited guests.

The exhibit opened at 3:30 and cocktails were served from 5:00 until 7:00 P. M.

This was a most successful affair and was the result of not only a hard working committee headed by Mr. John O'Connor, H. H. Robertson Company and a hard working Fairmont Hotel staff, but an earnest effort on the part of each of the exhibitors.

We can think of no other function of the Producers' Council where we can display our products to such a large group of architects and engineers and at the same time enjoy the good fellowship of the Producer members while entertaining our friends in the profession. This is a privilege and a pleasure enjoyed by members of the Producers' Council that cannot be found in any other organization.

GOLF TOURNAMENT

Hook and slice against a background of moans and groans will be the order of the day on Friday, June 20, when the Producers' Council Annual Golf

Tournament gets under way at the Presidio Club in San Francisco.

All golf playing producers as well as the "dubs" are urged to participate in this affair.

Tentative plans include invitations to all golf playing architects and each Producer member will be asked to sponsor at least one guest. Matches will be arranged to suit the players convenience and at the close of the day the coveted awards will be presented at the Annual Sports Dinner commencing at 7:00 P. M. at the Presidio Club.

ELECTED OFFICERS

At the last regular business meeting on May 5 at the Palace Hotel in San Francisco, the nominating committee presented their nominations for the gentlemen best suited to succeed the present officers that have served the San Francisco Chapter from January, 1951 to July 1952.

Installation of newly elected officers serving from July, 1952 to July, 1953 will take place at the Annual Sports Dinner on Friday, December 20, 1952.

The newly elected officers are: President, Al West, Aluminum Company of America; Vice President, Howard Noleen, The E. F. Hauserman Company; Secretary, Hillman Hudson, Vermont Marble Company; Treasurer, Tait Smith, Ceco Steel Products Corporation.

stitute.

Clark's recognition was for outstanding work in the field of Public Service and Service to the Institute, while the recognition of Jacobberger's effort was in the field of Public Service.

INSTITUTE RECOGNIZES NEW YORK COORDINATOR OF CONSTRUCTION

Robert Moses, New York City co-ordinator of construction, has been elected to Honorary Membership in the American Institute of Architects, at the Institute's annual convention in New York.

Moses is internationally known for his distinguished public service and is recognized as a leading authority in the many fields related to the planning and execution of public works and development.

TWO CALIFORNIA ARCHITECTS NAMED TO AIA FELLOWSHIPS

Welton Becket and Maynard Lyndon, A.I.A. architects of Los Angeles, have been raised to fellowship in The American Institute of Architects. The announcement was made by Charles O. Maticham, AIA regional director of the Sierra-Nevada district, who said the awards were among thirty-nine to be made nationally at the annual convention in New York City on June 25th.

Fellowship in the Institute is the highest class of membership and is conferred in recognition of distinction in design, service to the public, profession of the Institute.

Becket has been practicing architecture in Los Angeles for twenty years, while Lyndon has been practicing in this country for twelve years and is the winner of numerous AIA Honor Award competitions.

of Book Workers of the American Institute of Graphic Arts during June.

The show contains forty-seven volumes, hand bound in precious leather decorated with gold and in many cases inlaid with various types and colors of leather.

A collection of hand decorated paste papers and hand made marble papers is added. Also hand illustrated pages reminiscent of the technique of the medieval era.

This is the first exhibition of contemporary book binders in San Francisco since 1939.

CITY OF PARIS

The Rotunda Art Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, will feature an Exhibition of Paintings by Gladys Lloyd Robinson, Si Hassan El Glaoui and a group of Watercolors by Gisela Aronstein during June.

Recent paintings by Jean De Botton will be the June feature of the Pictures of the Month display.

**ORIGINATORS OF RANCH HOUSE
ARCHITECTURE ARE HONORED**

Henry M. Greene, 82, and Charles S. Greene, 80, two California architects considered the originators of the informal, rambling, bungalow-style ranch house which has spread to all parts of the country, were honored by The American Institute of Architects with special citations at the opening of an exhibition of their work in the Pasadena Art Institute early in June.

The citations were made by Charles O. Matcham, A.I.A. regional director, and Los Angeles architect.

**ENGINEERING FIRM WINS
NATIONAL RECOGNITION**

The consulting engineering firm of Delius and Thomas, San Francisco, has been awarded a \$100 Gold Seal award in the annual Gold Seal Award Competition sponsored by the Fourth International Lighting Exposition of the National Electrical Manufacturers' Association.

The award was made in recognition of the design and installation of the lighting in the Oakland Bank of America, Oakland, California.

More than 480 entries were submitted in the competition from all parts of the nation.

MORE STUDENT ENGINEERS NEEDED

A critical shortage in the United States for engineering manpower for industry and the defense effort has prompted the Advertising Council to accept an advertising campaign urging qualified high school students to consider engineering as a career, at the recommendation of the Engineering Manpower Commission of the Engineers Joint Council.

The present shortage of engineers numbers 60,-

000. Industry alone needs a minimum of 30,000 new engineers a year for normal replacement and growth, and against these requirements, engineering graduates are expected to total approximately 28,000 in 1952, 19,000 in 1953, and 12,000 to 17,000 in 1954.

The campaign will point out to high school students and their parents the opportunities that exist in engineering today and in the years to come, and the average of engineering training in qualifying young men for positions of leadership in many fields. The Advertising Council is a private, non-profit, non partisan organization supported and operated by advertisers, advertising agencies and the advertising media, for the purpose of utilizing advertising in the solution of national problems.

LOS ANGELES BUILDING WINS NATIONAL RECOGNITION

The Van de Kamp's Coffee Shop on Wilshire Boulevard in Los Angeles, recently received the top award of the food-distributing industry at the National Restaurant Convention in Chicago, for "the highest sanitation standards and superlative achievement in storing, handling, preparing and serving food."

The building was designed by architect Welton Becket & Associates in the contemporary California style and was designed to serve as many as 13,000 individuals a day. The coffee shop includes a main dining area and a 85-seat counter, a "sidewalk cafe", a complete bakery department, and a take-out food bar.

ARCHITECT IN NEW OFFICES

Architectural offices of Charles O. Matcham, A.I.A., and Sierra-Nevada District Director of The American Institute of Architects, have been moved to 621 South Hope Street, Los Angeles.

The Sierra-Nevada A.I.A. District includes California, Nevada and Hawaii.

KRAFTILE EMPLOYEES VIEW PRODUCT INSTALLATIONS

Twenty-three members of the Kraftile organization, under the leadership of C. W. Krait, president, toured Kraftile installations at the Naval Air Station at Moffett Field and the Peninsula Creamery Company at Palo Alto recently.

Highlight of the trip was an opportunity to view 20 years of Kraftile installations at Moffett Field where the first job was done in the galley and mess hall of Barracks No. 19 in 1932. Most recent installation was in 1951 when Kraftile Glazed Wall Units were used in the shower and toilet rooms of the addition to Barracks No. 19 and throughout in the Vehicle Power Repair Building.

At Palo Alto where the Peninsula Creamery

LOUVERED INCANDESCENT LIGHTING SYSTEMS

Look into Skylite modern architectural lighting systems—you'll like what you see! Because Skylite systems are designed to bring efficient, low brightness illumination to every application with an initial cost less than systems providing equivalent lighting. They are equally adaptable to suspended or ordinary ceilings. Exclusive features include relamping from floor, built-in reflector surface, silvered bowl lamps. Available in light output to suit your needs. No ballasts, starters or blinking lamps. Simplicity of construction assures easy maintenance, low upkeep!

Company plant featured Glazed Wall Units in the production room and cooler with Kratite Acid Brick on the floors, the tour was conducted by John M. Santana, creamery company president.

Following the inspections the group enjoyed lunch together at nearby "Rickey's."

PRODUCERS' COUNCIL SOUTHERN CALIFORNIA CHAPTER

The annual meeting of the Southern California Chapters of The American Institute of Architects and The Producers' Council with the Student Chapter of the AIA at the University of Southern California was held on the campus recently with Floyd Rible program chairman for the AIA, Max Burgman program chairman for the Producers, and Charles Fry, president Southern California Chapter AIA and Bert Taylor, vice president Producers Council serving jointly as chairmen of the day.

Speakers at the conference included N. Bradford Trenham, general manager California Taxpayers' Association speaking on "What's Ahead for Taxpayers", and Dr. C. C. Carpenter, assistant superintendent Los Angeles City Schools, whose subject was "The School Administrator and the Architect".

In the Annual Student Design Competition, first award was made to John Carter; 2nd award to Charles McReynolds; 3rd award to Robert Tyler, and certificates of commendation for exceptional

merit shown were awarded Thornton Ladd and John D. Hartfelder. Members of the Selection Committee for the AIA included Paul Hunter, John Landon and Charles Fry.

Arrangements for the program were made thru Dean Arthur Gall, School of Architecture, University of Southern California.

DISTRICT SUPERVISOR CONTRACTORS LICENSE BOARD IS APPOINTED

Albert H. Atwood has been appointed to the position of District Supervisor for the Contractors' State License Board in the Sacramento District which embraces thirty counties. He succeeds J. Ira Courtney who has been appointed Registrar for the Structural Pest Control Board.

Atwood has been connected with the San Francisco district office as an investigator.

SMALL FIRMS RECEIVE THREE FOURTHS CONTRACTS

More than three-fourths of all procurement contracts awarded by the Army Corps of Engineers in the first six months of fiscal year 1952 went to small business firms, the Department of the Army has announced.

Between July 1 and December 31, 1951, the Corps of Engineers placed 42,515 contracts with small business firms in the amount of \$308,582,600.

Your best and nearest source for standard and special Bronze products

Letters and Name Plates.

LOS ANGELES • SEATTLE • PORTLAND • SPOKANE • SALT LAKE CITY • DENVER • EL PASO • NEW YORK • HARTFORD • WASHINGTON, D. C.

This sum was more than 50 per cent of the total procurement expenditure for that period. In addition, parts of many of the contracts are sub-contracted to small business by large firms.

Lieutenant General Lewis Bick, Army Chief of Engineers, has commended the small business specialists attached to each of the five Engineer procurement offices for their efforts in assisting small businesses in obtaining Army Engineer contracts. A small business is defined by law as one having no more than 500 employees.

Industrial exhibits of products procured by the Corps of Engineers are on display in 18 field offices throughout the United States. The displays afford small business firms an opportunity to examine at first hand items of Engineer equipment and their component parts. Specifications and plans for these items can be seen at Engineer field offices.

ARCHITECTURAL FIRM MOVES OFFICES

The architectural firm of Hervey Parke Clark and John F. Beuttler, A.I.A. architects, recently moved into new quarters at 552 Mission Street, San Francisco.

The firm engages in the general practice of architecture.

ATOMIC BOMB AND EARTHQUAKE CONFERENCE IS SCHEDULED

The effects of atomic bombs and earthquakes on structures will be discussed at a conference to be held at the University of California, Los Angeles, on June 26-28.

The conference is designed to bring the most recent research results and professional developments in the field to architects, builders, building officials, city planners, plant managers, practicing engineers and public works officials.

Among the subjects to be considered are "Motion of Earthquakes," "Forces on Structures Due to Blast," "Analysis of Response of Structures to Dynamic Loading," "Failure Observations," "Building Code Provisions for Aseismic Design," "Aseismic Structural Design," and "Design for Blast Loading."

CALIFORNIA CONTRACTORS' LICENSE BOARD MEMBERS

H. Earl Parker, general engineering contractor, was recently appointed a member of the Contractors' State License Board, replacing J. Philip Murphy, whose term expired, and S. Glen Hickman, southern California plumbing contractor, has been named to succeed the late William Nies on the Board.

Jess B. Worthington and H. Cedric Roberts have been reappointed to the Board with terms expiring in January 1956.

BOOK REVIEWS PAMPHLETS AND CATALOGUES

BUILDING TRADES BLUEPRINT READING AND SKETCHING—
Basic Course. By Connecticut State Education Department
and Delmar Publishers. Delmar Publishers, Inc., Orange
St. and Bdy., Albany 7, N. Y. Price \$4.25.

A 190 page book divided into Three Parts plus Appendix;
has folded-in drawings, is well illustrated and indexed.

Basic fundamentals of interpreting blueprint instructions and
making trade sketches are described from "front line" building
experiences. It was prepared by a committee of craftsmen and
instructors to meet specific teaching requirements and repre-
sents a real need for architects, engineers, contractors, builders,
and educators.

LOUIS SULLIVAN, Prophet of Modern Architecture. By Hugh
Morrison. Peter Smith, Publisher, 321 5th Ave., New York.
Price \$6.00.

First published in 1935, the book has been reprinted by per-
mission of the author, Hugh Morrison, Prof., Department of Art
and Archaeology of Dartmouth College, and covers the life and
work of Louis Sullivan.

The author has this to say of Sullivan: "In the field of archi-
tecture it remained for Louis Sullivan to integrate romanticism
and realism, to achieve a synthesis both in theory and in prac-
tice completely expressive of modern life, and to make possible
the renewal of architecture as a creative art based on those
fundamentals that have always existed in the great architecture
of the past. In this sense he was the first modern architect."

The book is well illustrated.

SUGGESTED LAND SUBDIVISION REGULATIONS. Division of
Housing Research, Housing and Home Finance Agency.
U. S. Printing Office, Washington, D. C. Price \$4.5.

The community is built by the enterprise of many. Its char-
acter is determined by the intelligent cooperation of those
directly concerned. Sound planning and effective procedures
are necessary if the community, large or small, is to be a
satisfactory place of residence. Time and money are saved
thereby.

This book is intended to aid those who must do the planning
and the building. It is based largely on the studies, experiences,
and considered judgment of authorities in the field of planning
and building.

Desirable objectives and a suggested regulatory manual of
subdivision standards and methods of procedure for local use
are presented. The assistance which certain Federal agencies
can give is described and a bibliography of applicable litera-
ture is given in the appendix.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be ob-
tained by forwarding your request as indicated in the coupon
below to the office of the ARCHITECT & ENGINEER. Merely
mark the items you want and clip or paste the coupon to your
letterhead.

379. **WINDOWS FOR MENTAL HOSPITALS.** Windows for in-
stitutions designed for the safety of the patient are shown in
this new catalog printed by the Willma Bayley Company.
Complete installation details are shown with descriptions to
show the function of each design for hospital construction
needs. A.I.A. 16-E, ten pages, illus., 11/51.

380. **PRECAST PRESTRESSED CONCRETE SLABS.** A new 1952
catalog on Flexicore prestressed concrete floor and roof slabs
is released by the Flexicore Co., Inc. Special features include—
diagrams showing how Flexicore slabs are used with all types
of construction. A simplified load chart. An explanation of how
prestressing Flexicore slabs permits heavier loads on longer
clear spans. New ways to install heating systems, including
hot water radiant and a warm air split system that combines
circulating air with a radiant floor. A.I.A. 4-K, eight pages illus.,
4/52.

381. **RECOMMENDED STANDARD DETAILS FOR ARCHITEC-
TURAL PORCELAIN ENAMEL.** A Bulletin covering the recom-
mended and approved standard details for the use of Archi-
tectural Porcelain in Service Stations and Similar Buildings is
available. The details covered are coping panels, base and
display window sections and sections at flush type steel sash
or conventional steel sash, sections at overhead doors, recom-
mended details at head of doors, and canopy section, A.I.A.
15-B-2, four pages illus., 11/51.

382. HOW TO BUY FLOOR MATTING. "How To Buy Floor Matting," whether it be rubber, wood, plastic or composition, is the title of an unusual piece of new literature just issued by the American Mat Corporation here. According to D. M. Moor, Jr., president, different types of mats are scientifically engineered to do specific jobs in a wide variety of institutions, industrial and retail establishments. Because of a lack of knowledge of the product, the problem of the buyer in this field has long been that of how to select the mat which will provide the exact answer to his specific need. Since a good mat can last upwards of ten years, Moor believes that a buyer's selection should be carefully considered. 8 pages, illus., 3/10/52.

383. ROKADA MAGNESITE FLOORS. This catalog with specifications details released by the LeRoy Olson Co. covers the Rokada Magnesite floor which is most frequently used for areas on which there is heavy pedestrian traffic. Its most common uses are in stores, restaurants, soda fountains, food dispensary, toilets, etc. It is commonly recognized by the U. S. Government, State, County and City Boards of Health regulatory agencies as an acceptable sanitary floor. Complete details covering all applications and uses are included. A.I.A. 23-D, thirteen pages, illus., 6/10/51.

384. FINTUBE CONVECTORS. A variety of useful information concerning design, ratings, installation and performance of National Fintube Convector is presented in a catalog which is now available from The Natunol Radiator Co. According to the new literature, these heat distribution mediums for schools, hospitals, factories, apartments, public buildings or business offices contain heating elements of steel fins on steel pipe. The convectors described in the new catalog can be incorporated into heating systems employing hot water or steam at low or high pressure. Their lightness in weight is said to be advantageous since only 1 lb. of convector is required per square foot of steam rating, as contrasted to 4½ lbs. of cast iron radiation for the same rating. The catalog describes and illustrates covers and enclosures for the convectors, with architectural drawings to indicate pertinent roughing-in dimensions. No. 587, four pages, illus., 5/52.

385. NEW REFRACTORY BULLETIN. A new refractory bulletin entitled "Pibrico Refractory Products for Firebox and Other Heating Boilers" has just been issued by the Pibrico Jointless Firebrick Co. The bulletin covers the application of Pibrico monolithic linings to firebox and similar types of heating boilers. The catalog covers air-cooled as well as solid refractory construction. The "Multi-Rib" base is featured as adopted to this type of boiler. Also included are complete engineer's specifications for the refractory lining and outside wall construction (either brick or steel) for boilers of this type. Six pages illus., 4/52.

386. HOW TO USE SCHEDULE NUMBERS IN POWER PIPING DESIGN. A bulletin just released by Taylor Forge & Pipe Works is based on the new wall thicknesses of the 1950 edition of ASA Standard B36.10. It also includes a chart which tabulates the 1000 x P/S values for standard wall, extra strong wall and double extra strong wall pipe. B515A, eight pages illus., 4/52.

387. CONTROL OF INDUSTRIAL DUST. The Pangborn Corporation offers a two-color bulletin entitled The Control of Industrial Dust. Purpose of the book is to describe Pangborn Dust Control and its many applications. Case histories of users of Pangborn equipment are documented with photographs and performance data. Featured in the booklet is the Pangborn "CH" system of control which utilizes cloth type filters for the collection of finely divided dry dusts. A characteristic of this system is high recovery at economical cost. All elements of the system are described and illustrated, with diagrams showing how the entire system operates. Specifications on sizes and dimensions of Pangborn equipment are listed as well as construction details. Application and engineering data are tabulated according to types of dust, and collection requirements. B909A, twenty-eight pages illus., 6/52.

ARIZONA ARCHITECTS SUPPORT "ABC ASSOCIATIONS" LEGISLATION

H.B. 240, which provides that no sales tax on tangible personal property shall be charged a licensed contractor where such tangible property is incorporated into any building in fulfillment of a contract, is being strongly supported by architects in Arizona.

The measure was recently introduced in the Arizona Legislature along with a companion bill, H.B. 169, which amends the Contractor's Licensing Law by requiring all contractors to furnish a completion bond on all work undertaken, unless a specific waiver of said bond executed in duplicate is secured from the owners and a copy filed with the Registrar of Contractors. This bill has passed and will become effective on June 15, 1952.

WASHINGTON STATE HOLDS ARCHITECTS EXAMINATIONS

The Architects' Examination for the State of Washington will be held from June 23-26 at the University of Washington. Those who plan to take the examination should get their applications in at least fifteen days before examination date.

Forms of application may be secured from the Department of Licenses, Olympia, Washington.

SYDNEY TOWN PLAN

(From Page 15)

standard of rural development within easy reach. The belt is to contain farms, forests and rural institutions.

Provision is being made for a standard of 10 acres of recreation space for every 1,000 of population, not including national parks and beaches. There are already 90,000 acres of national park and more than 50 miles of public beach in the planning zone. Sydney thus will always be in the forefront among Australia cities where recreation space is concerned. It has been decided that built-up areas will not be taken over for recreation areas and foreshore improvements.

Where landholders dispute acquisition terms offered by the Cumberland County, final decision will rest with an independent tribunal the New South Wales Land and Valuation Court. The planning scheme is being financed on the basis that half the money is to be raised by the Cumberland County member councils and half is to be provided by the New South Wales State Treasury.

Apart from the overall scheme, each of the 40 councils in the Cumberland County is also expected to prepare a more detailed plan for its own section. A good example is Penrith Council's sub-plan (approved by the planning authority) for a 60,000-population satellite city on the Great Western Highway and western railroad close to the metro-

(See Page 43)

ESTIMATOR'S GUIDE

BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight charged, at least, must be added in figuring country work.

BONDS—Performance or Performance plus Labor and Material Bond(s), \$10 per \$1000 on contract price. Labor & Material Bond(s) only, \$5.00 per \$1000 on contract price.

CENTRAL CALIFORNIA CHAPTER, ASSOCIATED GENERAL CONTRACTORS OF AMERICA, with the assistance and cooperation of secretaries of General Contractors Associations and Builders Exchanges of Northern California; and the above information for southern California is furnished by the Labor Relations Department of the Southern California Chapter, ASSOCIATED GENERAL CONTRACTORS OF AMERICA.

SYDNEY TOWN PLAN

(From Page 38)

politan area. This city will absorb the industrial town of St. Mary's and the river town of Penrith, which at present have a combined population of 8,000. The resulting decentralisation of industry and housing will have an important impact on Sydney's economy.

Eight new national and regional roads are to be built. The major arterial roads will be "express ways", protected from intersecting traffic. For safety reasons, they will by-pass residential and shopping centres. The cost of such features as the "express ways", new railway tracks and housing settlements will not be met by the planning authority, but will come from the normal funds of Government departments controlling road transport, railways and housing.

The New South Wales Railway Department, for instance, which controls all rail traffic in the State, recently let a \$9,000,000 contract to a British firm (British Insulated Callenders Construction Company) for the electrification of 80 miles of railway from Parramatta west through the satellite city area to Lithgow. Work on this project has now begun, and the stretch of track will join the Sydney electric railway system by 1954.

Rail electrification to Lithgow, construction of the Southern Hemisphere's largest concrete dam 35 miles west of Sydney to step up water supply and the great Snowy Mountains Hydro-Electric Scheme between them will expand enormously the industrial potential of Sydney and Cumberland County generally.

Currently with the Cumberland plan for Sydney, two other important planning schemes are in progress. They are the Northumberland Authority's plan for the coal and steel city of Newcastle, 100 miles north of Sydney, and the Illawarra Authority's scheme for the Wollongong-Port Kembla industrial and port area, 50 miles south of Sydney. Both schemes are being conducted along similar lines to the plan for Sydney, and are being fi-

nanced separately.

In her town planning schemes, Australia has laid down a framework based on the best modern practice and adapted to local needs. Town planning in Australia has received a fillip in the form of a grant by the Federal Department of National Development to the University of Sydney for research. The research will be conducted by a staff under Professor Denis Winston, Professor of Town and Country Planning in the University, and will take until the end of the year.

HOLLYWOOD JUNIOR
COMBINATION
SCREEN and METAL SASH DOOR
★
The "WEATHER-WISE"
DOOR!!

**A VENTILATING SCREEN DOOR
A SASH DOOR
A PERMANENT OUTSIDE DOOR
ALL 3 IN 1!**

Discriminating home owners and architects have chosen Hollywood Junior as the TRIPLE DOOR VALUE in the COMBINATION SCREEN and METAL SASH DOOR field. LOW INCOME HOUSING PROJECT, San Francisco. Housing Authority of the City of San Francisco, owner. 317 units, \$2,233,000. ARCHITECT: Angus McSweeney, San Francisco. Two story row houses and 3 story apartment buildings, frame and stucco construction. GENERAL CONTRACTOR: Theo. G. Meyer & Sons, San Francisco.

FACTORY EXPANSION, East Los Angeles, Los Angeles County. Pacific Tube Co., owner. One story, die shop, machine shop, lunch room, toilets, supply warehouse area, laboratory and offices, \$500,000. ARCHITECT AND ENGINEER: Albert C. Martin & Assocs., Los Angeles. Steel frame, trusses, corrugated iron walls and roof, concrete floor slab, metal sliding doors, 50x551, brick exterior walls, steel saw tooth roof, gypsum built-up roofing, steel frame and brick interior walls. GENERAL CONTRACTOR: T. S. Construction Engineers, Inc., Los Angeles.

CAFETERIA BUILDING, Ventura, Ventura County. Ventura Union High School District, owner. Cafeteria building, \$152,000. ARCHITECT AND ENGINEER: Daniel, Mann, Johnson & Mendenhall, Los Angeles. Masonry wall construction, truss roof, composition roofing, cement and asphalt tile floors, interior plaster, steel sash, acoustical ceilings, sheet metal work, terrazzo toilet floors. GENERAL CONTRACTOR: Barringer & Botke, Santa Paula.

LOCKHEED EMPLOYEES ACTIVITY BUILDING, Burbank, Los Angeles County. Lockheed Employees Recreation Club, owner. 75x120 ft., \$95,211. CONSULTING ENGINEER: H. L. Standerfer, North Hollywood. Cement block, walls, structural steel, composition roofing, cement slab floor, steel sash, drywall interior, forced air heating. GENERAL CONTRACTOR: H. M. Keller Co., Burbank.

FIRST METHODIST CHURCH, Phoenix, Arizona. First Methodist Church, owner. 18 classrooms for church school, office section, chapel, 1000 seating capacity, fellowship hall, sanctuary seating 500, \$300,000. ARCHITECT: Lescher & Mahoney, Phoenix; Harold E. Wagoner, Philadelphia, plaster and masonry walls, mission tile on hip roof sections. GENERAL CONTRACTOR: Homes & Son Construction Co., Phoenix.

EASTSIDE ELEMENTARY ROOSEVELT SCHOOL, Lancaster, Los Angeles County. Eastside Elementary School District, owner. 8 classrooms, administrative unit, 2 kindergarten, multi-use room, kitchen and home economics room, \$227,000. ARCHITECT: Frank Wynkoop & Assocs., Carmel. Frame and stucco construction, composition roofing, concrete and asphalt tile floors, radiant heating, metal lath, reinforcing steel, steel sash. GENERAL CONTRACTOR: Barringer & Botke, Santa Paula.

INDUSTRIAL BUILDING, Monterey Park, Los Angeles County. Hersey Manufacturing

Co., owner. 1 story, offices, 60 x 140 ft., \$250,000. STRUCTURAL ENGINEER: Frank O. Bigelow, Pasadena. Reinforced concrete, tilt-up wall, composition roofing, steel sash, metal roll-up doors, concrete slab floor, asphalt tile floor in offices, forced air heating, suspended radiant heating, toilet rooms. GENERAL CONTRACTOR: O. K. Earl, Jr., Pasadena.

VINELAND AVENUE SCHOOL, Baldwin Park, Los Angeles County. Baldwin Park School District, owner. 1 story, 16 classrooms, kindergarten, administration building, multi-purpose and kitchen unit, 22,400 sq. ft., \$341,777. ARCHITECT: Kistner, Wright & Wright, Los Angeles. Frame and stucco construction. GENERAL CONTRACTOR: Stiglbauer Bros., Downey.

ADD. TO TELEPHONE OFFICE BUILDING, Inglewood, Los Angeles County. Pacific Telephone & Telegraph Co., owner. 2 story and basement, \$350,000. ARCHITECT: Parkinson, Powelson, Briney, Bernard & Woodford, Los Angeles. Steel frame construction, masonry walls, terracotta work, composition roofing, slab, asphalt tile and linoleum floors, steel studs and plaster interior, marble toilet partitions, basement cafeteria. GENERAL CONTRACTOR: R. J. Daum Construction Co., Inglewood.

VILLAGE ELEMENTARY SCHOOL, Santa Rosa, Sonoma County. Rincon Valley Union School District, owner. 7 classrooms, administration, kitchen, kindergarten, multi-purpose, toilet rooms, \$169,800. ARCHITECT: J. Clarence Felciano, Santa Rosa. Frame and stucco, concrete floors, asphalt tile floors, radiant heating, wood sash. GENERAL CONTRACTORS: Coddling Homes, Santa Rosa.

CHURCH, North Sacramento, Sacramento County. First Methodist Church, owner. \$50,

000. ARCHITECT: Charles F. Dean, Sacramento. Frame and stucco construction. GENERAL CONTRACTOR: Erickson Construction Co., North Sacramento.

GLAZIER SCHOOL, Norwalk, Los Angeles County. Norwalk School District, owner. 1 story, classrooms, multi-purpose building, kindergarten, administration building, utility unit, \$421,960. ARCHITECT: Kistner, Wright & Wright, Los Angeles. Frame and stucco construction, 28,360 sq. ft. GENERAL CONTRACTOR: A. I. Marek, South Gate.

HOME ECONOMICS BUILDING, Berkeley, Alameda County. Univ. of California, owner. 4 story, 55,000 sq. ft., \$1,047,237. ARCHITECT: Spencer & Ambrose, San Francisco. Reinforced concrete construction, lath and plaster partitions, metal sash, 2 elevators, composition roofing, 2 home management houses to be located on roof. STRUCTURAL ENGINEER: Hall & Pregnot, San Francisco; MECHANICAL ENGINEER: C. M. Simonson, San Francisco. GENERAL CONTRACTOR: Parker, Steffens & Pearce, San Francisco.

OFFICE BUILDING, TWO STORE BUILDINGS, San Francisco. Stonestown Development Co., owner. \$91,000. ARCHITECT: Welton Beckett, Los Angeles. Reinforced concrete construction. GENERAL CONTRACTOR: MacDonald, Young & Nelson, San Francisco.

NEW ELEMENTARY SCHOOL, Armona, Kings County. Armona Union Elementary School District, owner. 12 classrooms, administration, 2 kindergartens, multi-purpose, kitchen, toilet rooms, \$424,284. ARCHITECT: Walter C. Harrison, Los Angeles. 30,200 sq. ft., frame and stucco construction, steel sash, asphalt tile, composition or shingle tile roofing. GENERAL CONTRACTOR: R. H. Hougham, Hanford.

How to plan telephone facilities for best year-around living . . .

Preferred locations for telephones often vary with seasons—for example, you may want to plan for a portable telephone outlet on the terrace in summer. So home owners find extra convenience in having telephones where and when they need them. Flexibility is assured by thoughtful builders who provide for additional outlets in their blueprints.

Home owners appreciate built-in conduit and outlets and the cost of installing them during building is small. These extra facilities make it easy to add telephones later, without marring the beauty of interiors through exposed wiring. For free help in planning, call your local Pacific Telephone office and ask for "Architects and Builders Service."

Put built-in telephone facilities in your plans

Pacific Telephone

IN THE NEWS

ARIZONA ARCHITECTS ON STATE PROGRAM

The firm of Weaver & Drower, and Robert Blakey, two Phoenix architectural firms have been chosen by the board of control to plan a \$2,179,000 building expansion program for the Arizona State Hospital in Phoenix.

The program includes a 200-bed convalescent ward building; a new 100-bed building for tubercular patients; and two new buildings for senile patients.

CITY HALL BIDS REJECTED

The City of Concord, California, recently rejected bids for the construction of a one-story, 5000 sq. ft., reinforced concrete and frame City Hall.

Bid submitted was \$100,719.

ARIZONA HIGHWAY ENGINEER HONORED

William E. Willey, engineer, Department of Economics and Statistics of the Arizona Highway Department, has received a master's degree in civil engineering from his alma mater, the University of Illinois.

The degree was conferred for a two year study of the need for an extra lane for passing trucks on uphill highways.

ARIZONA CHAPTER AIA CHOOSSES DELEGATES

At the recent annual meeting of the Arizona Chapter, A.I.A., the following were

elected official delegates to attend the national convention in New York City:

Fred Weaver and Ed Varney, Phoenix; Gordon Luepke and Fred Kniep, Tucson; and Martin R. Young, Mesa, alternate.

Membership in the Chapter includes 37 corporate, 12 associate, and 14 junior associate members.

SCHOOL BONDS APPROVED

Voters of the Sequia Union High School District, Redwood City, California, recently approved a bond issue of \$2,250,000 for construction of additions to the San Carlos-Belmont, Menlo Park-Atherton, and Sequia high schools.

NEW TYPE ZENALOX GAS METER COVER

To meet the need of localities where climatic conditions make it inadvisable to install gas meters and regulators directly on the ground, the Gordon Z. Greene Co. of Los Angeles has developed a meter cover to be attached to the side walls of residences or other buildings.

Made of a new metal, Zenalox, composed of glass fibers and polyester resins, the meter covers combine handsome appearance with strength and lightness. They protect the regulator from vent freeze-up, prevent deterioration caused by elements; minimize maintenance cost; and are easy to ship and store; available at low cost.

ANNUAL BRICKLAYER MASTER COMPETITION

The Fourth Annual Brickmason apprentice National Competition was held May 18 to 24 in Boston, Massachusetts, with eighty finalists competing.

Winner of the event was presented the Belden Trophy, offered by America's brick and tile manufacturers and will also be the honored guest of the Structural Clay Products Institute annual cruise to Bermuda in November.

The contest is designed to promote higher standards of apprentice training as well as to demonstrate the nation's outstanding brick mason apprentice.

NAMED SALES DIRECTOR FOR SOUTHERN CALIFORNIA

The Richard S. Dawson Company of Los Angeles has been appointed sales representative for Bell & Gossett Company's industrial plants in Southern California, according to a recent announcement.

LOS ANGELES HOME SHOW

"The Californian," a home primarily designed to accentuate California's casual manner of living, will be one of two colorful model houses displayed at the 1952 Home Show, to be held at Hollywood Park from August 22 through September 1.

It will be a modern contemporary home, designed by Thornton M. Abell, A.I.A.

Architect of Southern California; will contain 2,192 sq. ft. and will utilize free use of space both inside and outside the house. It is expected to be in the \$25,000 to \$28,000 price range.

The Annual Home Show, which last year drew a 200,000 attendance, is sponsored by the 13 southern California construction industry associations and the Los Angeles Chamber of Commerce.

AMERICAN SOCIETY FOR TESTING MATERIALS

Robert J. Painter has been appointed Treasurer of the American Society for Testing Materials, succeeding John K. Rittenhouse who was retired after 43 years service with the national technical group.

Dorothy P. Douthy has been named Assistant Treasurer.

NEW CONTRACTING FIRM FOR PHOENIX

The Phoenix Paving and Contracting Co., Jack M. Vaita, president, has been organized for the purpose of engaging in all types of highway, street and heavy construction.

General offices of the new organization will be maintained in Phoenix.

Other officers include Max W. Haist, vice president, who was formerly with the engineering department of the City of Phoenix.

NEW LIBRARY BUILDING

The Stockton Board of Education has commissioned the architectural firm of Mayo & Johnson, same city, to design and handle details of constructing a new \$630,000 library building on the Stockton College campus.

The new building will be two-story reinforced concrete and the CMP has been granted.

NEW BUILDINGS FOR S. F. CITY COLLEGE

Plans have been completed by the City and County of San Francisco for the construction of a new classroom and library buildings on the campus of the City College of San Francisco.

Estimated cost of the work is \$2,314,123.

FACTORY SITE PURCHASED

Timber Structures, Inc., Oakland, have purchased a new office and factory site in Richmond, Contra Costa county.

Plans for construction of the modern building containing general office and manufacturing facilities will be announced soon, according to company officials.

ARCHITECTS MOVE TO NEW OFFICES

Daniel, Mann, Johnson & Mendenhall, architects and engineers, have moved into larger quarters at 4201 Sunset Blvd., Los Angeles, according to a recent announcement.

The new facilities include 9000 sq. ft. of space and provide 14 offices plus a specially designed drafting room.

BURBANK BUILDER ON LICENSING BOARD

H. Cedric Roberts, Burbank building contractor, has been reappointed to his third term as a member of the California State Contractors' License Board by Governor Earl Warren.

Roberts, who has served on the state board for the past eight years, has been active in Southern California construction

for 29 years and has served as regional vice president of the National Association of Home Builders. He has also served as president of the Building Contractors Association of California, a director of the Home Builders Institute, and a director of the First Federal Savings & Loan Association of Hollywood.

STATE AID FOR SCHOOL ADDITION

The Mt. Diablo Unified School District, Concord, California, recently approved a school bond issue of \$850,000 with funds to be used for the construction of additions to the present school buildings.

The district also received a state loan of \$250,000 to be used for the same project.

NEW "INBUILT" LIGHTING SYSTEM

"Skylike," a modular incandescent lighting system with unusual features, has just been announced by the Smoot-Holman Company of Inglewood, California.

It is designed for built-in modern architectural use, and is economical to install. Individual units employ lamps with silvered or semi-silvered bowls allowing variable light control from a widespread to a more concentrated distribution by an interchange of bulbs.

Complete information is available from the manufacturer.

ARCHITECT SELECTED

Architect Walter Wagner of Fresno, has been selected by the Merced Elementary School District to draft plans and specifications for the construction of a new elementary school and for additions to the present elementary schools in Merced, California.

Cost of the project is approximately \$500,000.

COTTON WAREHOUSES FOR SAN JOAQUIN VALLEY

The California Cotton Cooperative Association with headquarters in Bakersfield, has announced the construction of twelve one-story wood frame and sheet steel exterior cotton warehouses in the San Joaquin Valley.

Estimated cost of construction is \$750,000.

HIGH SCHOOL GYMNASIUM

The Armijo Union High School District, Fairfield, California, recently held a special election for the purpose of submitting a \$152,000 bond issue to voters of the district. The project was approved and funds are to be used for the construction of a new gymnasium building at the high school in Fairfield.

COURT HOUSE ADDITION FOR CITY OF YREKA

The Board of Supervisors of Siskiyou County (California) has approved an expenditure of \$217,000 for the construction of an addition to the county court house in Yreka.

Robert Keeney, Medford, Oregon, is the architect.

housekeeper's helper

when keeping house is a business proposition

...new colors of easy-to-clean

Suntile

Cleanliness is a dollars and cents matter in industrial kitchens or cafeterias, in food or drug plants, laboratories or public buildings. In fact, cleanliness is a "must."

Your selection of the right material for walls and floors will have much to do with the cost as well as the ease of cleaning and maintaining these interiors.

For instance, real clay Suntile has a hard, impervious glazed finish that is easy to clean with inexpensive soap and water. Dirt, grease, and smudges find no haven with Suntile. Costly, periodic redecorating and refinishing are ended practically for the life of the building.

Beyond this, however, Suntile has color advantages that also aid "housekeeping." New mottled tones of Suntile tend to resist soiling and reduce the necessity for "mirror-like" maintenance.

This very practical result is typical of the new Suntile functional color line. Better lighting, increased production, fewer accidents and higher employee morale are other results with sound business advantages.

HOW TO SELECT COLORS THAT ARE RIGHT for commercial, industrial and institutional interiors is discussed in our new descriptive booklet "Suntile Functional Color Recommendations."

Your Authorized Suntile Dealer will give you a free copy or you may write us direct, Dept. AE-7, The Cambridge Tile Mfg. Co., P. O. Box 71, Cincinnati 15, Ohio.

Suntile

GRAY HAUTEVILLE 734

a neutral tone
of great service

Suntile Gray Hauteville is a mottled gray tone. Gray has widespread use in many different types of interiors. The mottled effect makes it even more practical. This new gray is a warm, neutral color that avoids the "faded" tints of the past. It helps to control glare and create working conditions where vision is at its best. For obvious reasons mottled gray tends to combat dirt, smudge and stains. Suntile Gray Hauteville is but one of the functional colors in the new color line developed by Faber Birren, noted color authority, and The Cambridge Tile Mfg. Co.

EDITORIAL NOTES

JUVENILE DELINQUENCY

One of the most startling reports on juvenile delinquency, as a major problem in metropolitan cities, was recently made public by the Los Angeles Police Department.

Conducted under the direction of W. H. Parker, Los Angeles Chief of Police and made at the request of the Los Angeles City Council, the survey reveals that public housing, even where bordering private residential areas, presents a "problem" to police authorities.

Extra amounts of expensive police protection are required for existing tax subsidized public housing projects. At least 40 per cent of police time spent in juvenile investigation in one area of Los Angeles was devoted to public housing projects.

Measured in terms of dollars and cents, another public housing project of 1,592 persons required an expenditure of \$25.80 per person for policing as against the average cost per Los Angeles citizen of \$12.04. Altogether, the Los Angeles bill for police services around public housing units was \$332,306.

Police help per 1000 population in a privately owned and developed subdivision average .8 per cent, whereas the report shows in one public housing area the average was 20 calls per 1000 population.

Regardless of any other factor the Los Angeles survey shows that where there is lack of ownership and responsibility of property there is a deteriorating individual attitude toward the basic American family tradition.

Conditions in Washington are about normal. A correspondent for a newspaper called a Federal agency to learn how a "home-town" project was progressing, and after being shunted from one telephone extension to another wound up with an official on the other end of the line who advised—"I suggest you call your home-town newspaper."

GOVERNMENT THAUMATURGY

Some people live and learn—others just live!

The complete debacle that overtook the theoretical wage-price program in the steel crisis shows how completely ill conceived the program turned out to be, and while the recent steel dispute focused the spotlight of public attention on the nation's present critical economic and serious political problems, it should not be assumed by anyone that the Wage Board's future policies in such matters will be changed as long as the present combination of labor and so-called "public" members of the Board are in control.

As a matter of conjecture, the contrary is prob-

ably true in that the same majority which prevailed in determining the Board's steel policies have upon numerous instances succeeded in ramming through recommendations that were of equal import to the public and industry, although comparable public reaction did not result.

There are those who contend the overall program has supplied a breeding ground for things abhorrent to American tradition, however, it is certain that whether the Wage Board shall be continued or allowed to die, is directly up to members of Congress as unless some action is taken the present Defense Production Act will expire on June 30.

There are nearly forty-six million dwelling units in the United States, according to the 1950 Census. This is an increase of 8,550,000 or 23% since 1940.

ELECTION PREDICTION

You can tell by the excitement and talk of all your friends and neighbors that next November 4th is going to be a truly "great day" throughout all the United States, and that in conformity with the cardinal principal of a free people unshackled by tyranny or tyrant, voters will go to the polls to decide one of the most important and exciting elections in the nation's history.

We are willing, at this early date, to stick our neck out and make a "sure-fire" election prediction!

We predict — if YOU are not PROPERLY REGISTERED, You Will NOT VOTE.

Fortunately it is the Law of the United States and of every town, city, county, and state thereof that if you are not registered, you cannot vote.

Right now is an excellent time to make sure that you are properly registered, and that you are not going to be caught sitting on the sidelines on Election Day—unable to cast your all important vote for your favorite candidate, and for the many other vital matters which will be submitted to the people for their approval or rejection on the General Election ballot.

You owe it to yourself, your family, your children's family and to your country to make sure . . . First, that YOU are REGISTERED, and second, that your friends, your relatives, and your neighbors are all registered and thus properly qualified to VOTE at the General Election on November 4th.

Last year the volume of new construction put in place in the nation exceeded \$28-billion, and so far this year the rate has exceeded that of the comparable period in 1950.

NEWS and COMMENT ON ART

ARTIST AWARDED MEDAL BY THE AMERICAN INSTITUTE OF ARCHITECTS

Marshall Fredericks, Detroit, Michigan, sculptor has been awarded the Fine Arts Medal of The American Institute of Architects with the award being made at the Institute's 84th Annual Convention in New York City.

Fredericks is now primarily engaged in the development of the Cleveland War Memorial, sculpture for Ohio State University, and the Fort Street Union Depot in Detroit. Among recently completed work is a war memorial at the University of Michigan and sculpture for the Detroit Veterans Memorial Building.

CALIFORNIA SCHOOL OF FINE ARTS

Summer Sessions offered by the California School of Fine Arts, San Francisco, offer a general program in both day and night classes, which if combined present a maximum of six credit units.

The day classes include such subjects as Painting, Landscape Painting, Portrait and Figure Painting and Drawing, Painting Elements; Drawing from Nature, Life Drawing; Graphic Printing Techniques, Lithography, Etching, Engraving, Silkscreen; Design, Two-Dimensional Design, Color, Sculpture, Workshop, Ceramics, Jewelry; Commercial Art, Advertising Art, Illustration and Photography; How

to Read a Photograph, and the Photographic Process.

In the night classes Painting Fundamentals, Painting, Life, Space Materials, Ceramics, Advertising, and Color and Design are being offered.

Two special courses are being offered this year. Visual Communication with Ernest Mundt, director; and Arts in Architecture, with Mundt also the director.

The regular schedule of Summer Classes opened June 30th and will close on August 8.

CITY OF PARIS

The Rotunda Art Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan will offer an exhibition of paintings by Dorr Bothwell and Bob Anderson, and an exhibition of Wood Sculpture by David Lemon during the month of July.

The Bothwell group includes thirty paintings made during 1950, 1951 and 1952, while the Anderson exhibit includes a series of ten paintings.

The Pictures of the Month feature a group of Paintings in Wet Clay by Sarah Ryan.

RARE BLENDING OF ARTISTRY AND ARCHITECTURE . . . ENTRANCE

AMERICAN TRUST COMPANY'S NEW GARDEN BANK

San Mateo, California

W. D. PUGH, A.I.A., ARCHITECT

WILLIAMS & BURROWS, GENERAL CONTRACTOR

**DETAIL OF
PATIO ENTRANCE**

Flagstone walled plant area, center plant square, spacious grassed area — plus brick walls of building are features of this new bank building.

An outstanding example of how a commercial building can be designed to serve its community and blend into the beauty of its suburban surroundings is the new Garden Bank at San Mateo, California, designed by architect W. D. Pugh, A.I.A., for the American Trust Company of San Francisco.

It is distinguished by several unique features: Its location and original design, landscape setting, extensive use of glass, outdoor garden patio, spacious tree-shaded parking area, a sun deck for the employees.

San Mateo is a residential community noted for

PATIO ENTRANCE . . . Served from Auto Parking Area at Rear

NEW GARDEN BANK . . .

its fine homes and attractive gardens and in the heart of these surroundings is the Garden Bank. At the rear of the property is a large city park with shade trees, recreation facilities for mothers with small children and tables for family picnics.

No marble columns, high vaulted ceilings or the traditional architectural standbys greet the customers as they approach and enter the building. Instead, the effect is one of huge expanse of glass, decorative tile and brick with streaming sunlight and soft shadows, plus a scattering of flowers in a score of varieties and colors.

Designed in the shape of an irregular "L," this unique banking structure extends for 107 feet on Fourth Avenue and 85 feet on San Mateo Drive. Set diagonally across the property at this street intersection is the main entrance with its copper trim, utilizing more than 160 sq. ft. of plate glass in the double glass doors and overhead windows 18 feet high. This doorway is flanked by vivid-tinted walls in squares of Tennessee Crab Or-

chard stone and angled stone window boxes—the only entrance of its kind on the Pacific Coast.

More than half of the bank's entire wall length is taken up by large windows of heat-resisting plate glass, which appears tinted a blue-green from the outside and clear from the inside. It deflects the sun's rays to allow light, but not heat, to enter the interior.

A spectacular outdoors patio, or enclosed formal garden, occupies the open area at the rear of the building. Green lawns, shrubs, citrus trees, multi-colored flowers, stone paved walks and benches are included in this garden setting. Customers can come from the parking area and enter the banking room from this garden patio through another set of glass doors identical to those at the front entrance.

Immediately beyond the garden and separated from it by a redwood lattice fence is the paved parking area, which will accommodate 40 automobiles. Venerable oak trees which measure more than nine feet around the base have been left to

EXECUTIVE DEPARTMENT . . . Situated for Customer Convenience

... NEW GARDEN BANK

shade the area, which is bordered by flower beds and shrubs, forming parking islands. Spacious parking lanes have been laid out so that women customers will have plenty of room for backing and turning their cars. The parking lot is reached by a 20-foot driveway, entering from Fourth Avenue.

Other flowers and shrubs almost completely surround the building. Planting boxes of stone to match the wall facing extend in a continuous line from the end of recessed window areas right up to the front entrance doors. Both window areas are set back about 15 feet from the sidewalk to form the garden sections planted in flowers and shrubs, which are watered by a special sprinkling system.

The entire area, from the sidewalk line at the front entrance, the vestibule and the public area inside the bank and out to the patio, is paved with 20-inch perfectly matched squares of Virginia Greenstone. It is black-green with sparkling highlights created by quartz particles. Unlike other hard floor surfaces commonly used in banks and other public buildings, this stone provides sure footing even in wet weather.

Another type of Tennessee stone was selected for use in the sills, wainscoting, planting boxes, facing and window trim. Its coloring ranging from rose-tan to brown shading produces an Old World tile effect.

A long, thin, red brick was used for the main exterior surfaces. It was selected for its color and unusual hardness and was cut to size on the job. The brick proved so hard that more than 2500 circular power saw blades were used in the cutting process.

Sunlight streams into the interior from all sides during the day. The banking room and work areas seem to be undergoing an almost constant changing transformation as the natural light and shadows change with the sun and the cloud patterns in the sky.

Recessed into the acoustical tile of the main floor ceiling are spotlight type lighting units, designed to eliminate any glare when artificial illumination is used.

The fixtures and wood trim are of bleached

FIFTH AVENUE

RENOVATION OF SAKS FIFTH AVENUE

San Francisco, California

BURKE, KOBER & NICOLAIS, Architects

ERNEST BONNAMY, Consulting Architect

DINWIDDIE CONSTRUCTION COMPANY, General Contractors

When Saks Fifth Avenue acquired the building at the corner of Grant Avenue and Maiden Lane in San Francisco, and commissioned the architectural firm of Burke, Kober & Nicolais of Los Angeles to re-design the structure into a replica of Saks Fifth Avenue New York store, it was little realized that to remodel the building would require almost complete new construction.

The old building, while conceded architecturally as belonging to an era of a number of years ago, was one of the first new downtown store structures to take shape following the great earthquake and fire of 1906, and it was presumed that basically, at least, reconstruction could be accomplished without encountering too many complications.

Dinwiddie Construction Company, general contractor, soon found that much of the basic structural methods, materials, and design used in the initial building were inadequate to serve as a foundation for the new structure. The result was that today's building represents almost an entirely new project, very little of the old structure being

used in the new Saks Fifth Avenue store.

These construction problems enabled the architects to design a modern store with every facility to better serve a particular type of customer. Saks Fifth Avenue in New York City is internationally known and recognized for its quality of service, quality of merchandise, and quality of customer. The San Francisco store was intended to serve the same purpose on the West Coast, therefore, a great many defects in the original building were turned into opportunities to rebuild the store in keeping with the firm's long established policies.

About the only recognizable feature today is the freight elevator which serves the basement to third floor with street entrance on Maiden Lane. This equipment serves only in the handling of freight and has sufficient capacity for present needs.

Two strictly modern automatic, self leveling floor elevators have been installed at the left of the store's main entrance on Grant Avenue, which serve customers from the basement to the third floor. For additional use by those who desire to

SAKS FIFTH AVENUE . . .

use it, a wide stairway was placed immediately adjacent to the passenger elevators. This stairway would also serve as well protected areas in the event of a military emergency.

Recessed picture-frame type displays have been located in the elevator alcove on the street level or main floor, and each department throughout the store has been designed to serve in the form of individual shops. All of the partitions are new, and in the case of the main floor the entire area of the street display windows has been left open and is controlled by curtains only. This provides greater flexibility in presenting window displays, and would permit, if desired, use of the street windows as a visual entrance into the entire ground floor.

Each of the three main merchandise selling floor areas is covered with a wall-to-wall rug, colors varying to harmonize with fixtures and motif of

individual displays.

The furniture and fixtures were especially designed by Ernest Bonnamy, well known architect and designer of New York City. Bonnamy also personally supervised the interior design and color harmony throughout the store, much of which is identical to the firm's New York store.

Each floor is served by an air conditioning unit which permits fixing of temperatures as desired in any given area. Thus temperatures may be adjusted in the fur department, or sports department, by automatic thermostat. The system also provides a thorough air conditioning circulation. A master control of the entire unit has been installed in the basement in the area used by building maintenance personnel.

General lighting throughout the new building features indirect installations with origin above

BUILDING as it appeared prior to start of remodel . . . This was one of the first "modern" store buildings to be built following the earthquake and fire of 1906

fixture height and placed in recesses along the walls. Where special emphasis on lighting is desired to highlight some particular showcase, fixture, or merchandise, spot flood lights have been placed in the ceiling.

As a safety measure against fire and to comply with sound principles of modern store design, city ordinances, and insurance regulations, a new automatic sprinkler fire system has been installed.

Another feature of Saks Fifth Avenue is the utility purpose of the general customer areas. While no effort was spared in designing the store to offer a maximum in merchandise display fixtures, and display furniture both glassed in and exposed, no

actual selling is done here. Individual customer rooms have been provided on the second and third floors where merchandise is examined at leisure, fittings are made, and other desirable facilities are offered the customer. Each room is equipped with an individual telephone.

Ample space has been provided in all desired areas for supplemental merchandise, however, storage space is limited to only bare necessity. A large warehouse in another location is maintained for the handling of larger quantities of merchandise.

BASEMENT

Arrangement of the building proper includes a

AFTER REMODEL . . . About the only similarity with old building is overall shape and street-alley location. Modern exterior emphasizes small windows, decorative balcony at second floor. General design is similar to company's New York store.

SAKS FIFTH AVENUE . . .

spacious basement which is used for a number of store functions. The credit, sales, and auditing departments are located directly in front of the passenger elevator, and while each departmental operation is separated from another, the partitions are modified in height thus giving the feeling of spaciousness throughout the area. Customer services are also located in the basement.

Special facilities for alterations, a work room, merchandise receiving, merchandise shipping, and a 40-person employee cafeteria are also to be found in the basement.

STREET FLOOR

The main, or street floor, is served by an attractive entrance on Grant Avenue. Another entrance has been provided on the Maiden Lane side of the building. Both store entrances usher customers into a spacious central area. Individual shop-departmentals having all the characteristics of attractive, personalized stores, are served from the center open-space section and an elevator alcove

at one end of the building provides modern automatic transportation to the basement, mezzanine, and two upper floors. Immediately adjacent to the passenger elevators is a stairway which serves the same portions of the building and may be used if so desired.

A number of large mirrors are used on the main floor. The major building support columns are covered with mirrors and the general impression upon entering the store is one of spaciousness, light, and compatibility.

Featured merchandise on this floor includes accessories, hosiery, jewelry, gloves, bags, shoes, and millinery.

MEZZANINE

The mezzanine has been devoted to the executive offices of James J. Ludwig, general manager of the San Francisco store. Facilities for a private secretary-receptionist and waiting room are also provided, the location being near the passenger elevators and stairway.

SECOND FLOOR . . . Showing efficient arrangement of merchandise displays, specially designed fixtures, and placement of overhead spot and indirect lighting.

Personnel department is also located on this floor. Some storage space has been provided to meet limited auxiliary merchandise requirements, but the majority of space has been devoted to a shoe and fur repair department; a general display department which has charge of displays throughout the store, store windows, and special exhibit activities which may be participated in by the store management.

The mezzanine is equipped with complete air conditioning, automatic fire extinguisher, and to minimize noises the ceilings are covered with acoustical tile.

SECOND FLOOR

Design of the second floor has been carried out in the Louis XV motif with furniture and decor following traditional lines. Soft colors harmonize with merchandise displays and a feeling of hominess prevails.

Merchandise featured on the second floor includes furs, suits, and the firm's better ready-to-wear lines.

THIRD FLOOR

The third and top floor of the remodeled building

has been carried out by the architects and designers in the Provincial motif. A central display area faces the elevators and from this is arranged areas for handling sports wear, dresses, lingerie, and corsets.

In commenting on the public's acceptance to the general arrangement of the building and its merchandising facilities, general manager James J. Ludwig declared "Ernest Bonnamy, of our New York offices, has had wide experience in developing interior designs harmonious to the type and functions of Saks Fifth Avenue store, and he has carried them out to a fine degree in San Francisco. The result has been an immediate and favorable public response," furthermore he pointed out, architects Burke, Kober & Nicolais and general contractors Dinwiddie were faced with a number of unusual circumstances in planning and consummating the actual building remodel, and the success of their efforts is shown in the building itself.

HISTORIC JACK LONDON SQUARE SEA WOLF RESTAURANT

HARRY BRUNO, A.I.A. Architect

VEZEY CONSTRUCTION COMPANY, General Contractors

The fabulous new Sea Wolf Restaurant which has been built by the Port of Oakland as an important part of the city's new and historic Jack London Square project on a portion of the waterfront made famous in fiction and fact by the world-famed writer Jack London, was designed by architect Harry Bruno, AIA, in keeping with the intriguing waterfront atmosphere and the spirit of Jack London.

The over-all design of the building is greatly influenced by the unusual situation of a water side view. The bar and dining room face the Oakland Estuary and the Inner Harbor so that diners have a full view of the ocean going vessels and world shipping commerce passing before them.

The main entrance to the building which has been constructed of beautiful California Redwood, is on a circled drive that terminates the lower end

DETAIL

*Plastering by
Wallace Smith*

of Broadway at the Jack London Square. On the opposite, or Estuary side, is another entrance designed by the architect to serve patrons arriving at the Sea Wolf by private yacht and power cruisers.

The building itself gives a wind-swept, driftwood, impression to the viewer with its long sloping roof and many sharp angles. On top of the roof is a gracious square spire which acts both as a distinct landmark and may be seen for quite a distance in all directions, and also serves as the background for the serpent head reverse channel lighting of the large neon sign "Sea Wolf."

Interior decorating of the building is lavish but at the same time follows the exterior theme. The dining room is coral pebble tone and the walls are a natural brown cork which sets off a series of watercolor paintings of the Oakland Harbor framed in white, the work of the muralist Guy Maccoy.

Most of the wall paneling is finished in redwood and oak and the ceiling is reminiscent of a ship with wooden beam stanchions. The dining room tables are designed for a view purpose and face the waterfront. In the center three bankettes form a clover leaf pattern about a planter containing tropical growth. Lighting is soft and indirect, so as

COCKTAIL LOUNGE

Has been equipped with specially designed Swedish modern furniture. Patrons enjoy a full view of the famed Estuary and world-wide shipping.

not to detract from the view.

The Cocktail Lounge has been furnished with custom designed Swedish modern furniture. In the center of the Lounge is a free form planter eight feet long. It is decorated with white chipped marble, Japanese floats, driftwood logs and ceramics placed about tropical plants. The bar is a serpentine shape following the Sea Wolf insignia, and this has been done in corina and finished in a driftwood effect.

The Captain's Room, which was designed to

accommodate the overflow of customers from the Cocktail Lounge, is intended to give the yacht and power boat enthusiasts of the area a warm respite from the night winds off the Bay. It is equipped with a unique fireplace set in a stone wall and served by an exposed copper room-flu. This room also has been pleasantly furnished in Swedish furniture and low coffee tables.

Swedish furniture has been used throughout the lobby which features four plastic screens of copper fish forms, designed and produced by Emil Nar-

DINING ROOM

The main dining room, with its exposed overhead beams, has large glare free glass windows overlooking the Estuary and waterfront commercial district.

Modern fold decorative doors that fold instead of swing, have been installed throughout the interior.

man. Even the ladies powder room follows the sea atmosphere with a wall paper picturing mermaids backing a full length mirrored vanity. Chairs are finished in black, setting off the paper.

The Sea Wolf is functional, not only in its dining room design, but also in its kitchen layout. All equipment is steam operated and every item laid out to save steps and increase worker convenience in operation. Everything represents the newest style of product and all are of stainless steel. The most amazing installation in the building is probably the five mammoth walk-in freezers which have been constructed separately to keep the various types of food in separate areas for convenience and health reasons.

Harry Bruno, the Sea Wolf's designer, has been an active architect in Oakland and the Bay area since 1937, and this new structure is an outstanding tribute to his originality of design. Other projects designed by Bruno in the Oakland area include the Pacific Employers Insurance Building at Piedmont and MacArthur Avenues and a large number of homes and industrial buildings.

WASHINGTON STATE CHAPTER

Paul Thiry was re-elected president of the Wash-
 ington State Chapter, AIA, at their annual meet-
 ing in Seattle. Other officers elected were John
 S. Detlie, re-elected 1st vice-president; Robert H.
 Wohleb, Olympia, 2nd vice-president; Robert H.
 Dietz, re-elected Secretary, and Edwin T. Turner,
 Treasurer.

Elected to serve on the Executive Board were B.
 Marcus Priteca, Francis E. Huggard, and John M.
 Morse. Also serving on this Board are Paul H.
 Kirk and John Paul Jones.

The Chapter has already started activities in
 connection with the national convention of The
 American Institute of Architects, which will be
 held in Seattle in 1953, and the following have
 been named as Chapter delegates: Charles T.
 Pearson, Leonard W. Bindon, Robert H. Dietz,
 James J. Chiarelli, John T. Jacobsen, Lawrence G.
 Waldron, Jr., Lister Holmes, Stephen R. Richard-
 son, Marvin R. Patterson, and Robert L. Durham.
 These delegates will also serve as the Institute
 Affairs Committee and with Carl F. Gould, A. M.
 Young, Victor N. J. Jones, George W. Stoddard,
 Wendell Lovett, Edward J. Baar and Floyd A.
 Naramore will serve as delegates to the North-
 west Regional Council.

CALIFORNIA COUNCIL OF ARCHITECTS CONVENTION

In preparation of the annual convention of the
 California Council of Architects to be held at Yo-
 semite in October, Frank Hope, AIA, Architect of

San Diego, has been appointed assistant manager.
 He will also serve in the same capacity for the
 1953 convention scheduled for Coronado.

SAN DIEGO CHAPTER

The regular June meeting was devoted to the
 consideration of Aesthetics and was a friendly
 round table discussion of architecture and its allied

NORTHWEST ENGINEERS CENTENNIAL AT PORTLAND

Professional engineers of Oregon, Washington and Idaho will meet in Portland on August 9th for a 1-day Northwest Engineers Centennial to commemorate a century of engineering progress in the "far corner" of the nation.

"We will review 100 years of engineering progress in the Northwest," W. C. Williams, President of the Professional Engineers of Oregon, reports, "and then we will take a long look ahead into the next century."

Co-hosts with Williams are E. L. Mathes, Boise, President of the Society of Professional Engineers

of Idaho, and H. Jack Reeves, Spokane, President of the Society of Professional Engineers of the State of Washington.

R. Evan Kennedy, Portland engineer, is General Chairman of the event.

WASHINGTON SOCIETY OF PROFESSIONAL ENGINEERS

Robert C. Dietrich of Seattle was recently elected president of the Seattle Chapter of the Washington Society of Professional Engineers for the ensuing year.

Elected to serve with Dietrich were: Carl M. Berry, 1st Vice-president; Robert H. Lochow, 2nd Vice-president; George W. Graetz, Secretary-Treasurer; O. S. Willumsen, Assistant Secretary; and L. R. Durkee, State Trustee.

THE FEMEINERS

Mrs. A. C. Horner of San Francisco, President of the Femeiners organization comprising wives of civil and or structural engineers in the Bay Area

belonging to the American Society of Civil Engineers or the Structural Engineers Association of Northern California, heads one of the most unique groups allied to professional circles in this region.

MRS. A. C. HORNER
President

The organization was started two years ago to encourage engineering wives to become better acquainted and by social gatherings to promote good fellowship among engineers. A secondary purpose of the group is to assist at conventions of the engineering societies.

Membership now numbers more than 100 and regular meetings are held with brief business sessions, usually followed by a program which may

be devoted to the subject of "charm," "hats," the playing of cards or the more serious matter of civilian defense. Social events are scheduled regularly, outstanding is the annual Christmas luncheon, and activities of the group have expanded recently into the possibilities of sponsoring engineering scholarships.

The July meeting of the group heard Mrs. Warren Gibbs, teacher of creative writing, discuss the subject of "writing." Mrs. August Waegemann served as chairman of reservations; Mrs. John Mitchell was the hostess of the day; and Mrs. Frank E. McClure was in charge of table decorations.

The August meeting, in charge of Jim Stratta as Chairman, will be devoted to a consideration of Foundation Problems in connection with a major structure being built in the Bay Region, with discussions led by G. A. Sedgwick, W. W. Moore, and C. R. Graff.

SOCIETY OF AMERICAN MILITARY ENGINEERS

Ray D. Kelly, Superintendent of Technical Development for United Air Lines, spoke before the July meeting of the Society of American Military Engineers—San Francisco Post, on the subject of Jet Transport Aircraft.

In addition to covering the potentialities and problems associated with jet transport aircraft, Kelly discussed the relationship between military and commercial jet developments.

The Technical Development Division of United Air Lines, formerly located in Denver, has been transferred to the company's engineering and maintenance base at the San Francisco Municipal Airport.

The meeting was held in the Presidio Officers Club.

Edited by Phil Brown, OTIS ELEVATOR COMPANY.

The annual Golf Tournament and Sports Dinner held on Thursday, June 19, at the Olympic Club, Lakeside, was a tremendous success. A great deal of the credit for the success of this event goes to Mr Clyde Cornell of the Natural Gas Equipment Company, who headed up the committee. We also extend our thanks to Mr. Phil Mittell of the Otis Elevator Company for his expert handling of the awards.

Finishing in first place were Mr. Alec Wilson, Architect, and Bob Dumesnil, the Brookman Company, with 82 on the par 72 course.

Second and third places for the low gross went to Jim Johnson (90) and Fred Confer (92) for the architects, and to George Smith (84) and Bob Paige (90) of the Producers.

Ray Brown claims he was off his game but succeeded in sharing first place honors with M. C. Hofheinz for the low score on the blind bogey. Norman Patterson won the blind bogey for the architects with a sizzling 61. Gordon Hughes was successful in nosing out your writer for the tournament's dub chump award.

After several rounds of cocktails at the 19th hole and following a very fine dinner of roast beef, we had a report from President Art Staat who reviewed the year's progress. Art thanked the various officers for their assistance during the past 18 months and he pointed out that the co-operation of the individual members of the organization is the main reason that the organization has been successful during his term and a half of office.

Art introduced our new president for the coming fiscal year, Mr. Al West, Aluminum Company of America. Al, of course, is well known to us all and we are certain that the entire membership of the Council joins us in pledging our support and assistance to Al and his task during the coming year.

In closing, Al introduced the other officers: name-

ly Howard Noleen, Vice-President; Hillman Hudson, Secretary; and Tait Smith, Treasurer. Also announced were the committee chairmen for the coming year; namely, Membership, Mr. John Crowley; Public Relations, Phil Brown; Fellowship, Herb Kaewert; Joint Information, Rowley MacNichol; Educational, Herb Duncan; Program, Howard Noleen; and Advisory, Al Staat.

Coming Events

July 14 will be the date of our next regular meeting, at which time Bastian Morley Co., Inc., will present an informational meeting on radiant baseboard heating. This is the first of a series of five informational meetings to be held at our regular monthly gathering that will take us up to the end of the year.

We list below the remaining informational meetings with the proposed topics and in the event that any architects or engineers have a particular interest in the proposed subjects, we ask that they get in touch with either the sponsoring company or the Producers' Council to insure that they are invited to the particular meeting.

July 14—Informational Meeting, Palace Hotel, San Francisco, Bastian Morley Co., Inc., Radiant Baseboard Heating.

August 4—Informational Meeting, Palace Hotel, San Francisco, American Lumber & Treatment Co., Protective Treatment of Lumber.

September 8—Informational Meeting, Palace Hotel, San Francisco, Bell & Gossett Co.

October 6—Informational Meeting, Palace Hotel, San Francisco, Detroit Steel Products Co., Classroom Daylighting.

November 5—Informational Meeting, Palace Hotel, San Francisco, Truscon Steel Company, Steel Double-Hung Windows for the Modern Residence.

December—Annual Christmas Jinx.

an exhibition of Paintings by Demetrios Jameson and a special feature of Museum Collections for July.

Twenty-seven Renaissance paintings given the Museum by the Samuel H. Kress Foundation are on exhibit in the second floor Ayer wing.

The six-week summer session offers painting and ceramics for adults, and classes for children.

GUEST INSTRUCTORS AT SUMMER ART CLASSES

Jack Shadbolt, one of Canada's leading painters, and Dorr Bothwell, outstanding serigraphist of the Bay Region, will be guest instructors at the Summer Art Classes of the California School of Fine Arts in San Francisco.

Miss Bothwell, recently returned from a two year stay in France, will teach design and serigraphy. She is head of the Department of Design of the Parsons School in New York City, and trustee of the National Serigraph Society.

A special course in Visual Communication is also being offered in which practicing architects and professional artists participate in an effort to bring about a closer cooperation between these two professions.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, has arranged an interesting July program that will include:

GARDEN BANK

(From page 11)

straight grain walnut, trimmed with Napoleon marble. The officers' area is carpeted in "desert-sand" biege. Natural-colored drapes hanging from the tall windows complete the banking room color scheme.

To the left of the front entrance are eight teller windows for checking and savings account activity. At the right is the officers' platform, adjoined by a conference room where customers may discuss their banking problems in private.

Adjoining the officers' desks on the right are three windows serving note department customers. Its layout is unique in that the department is self-contained and has its own vault for storing its records.

At the end of the room is an unusually large safe deposit vault, equipped with various size boxes and storage space for bulky valuables. Separate booths have been provided for examination of papers and other documents, also a large conference room.

On this floor is an attractive ladies' lounge and rest room trimmed in Italian marble. A biege rug complements the color scheme of the soft tinted walls. Sit-down desks are provided on the main floor for making deposits and public phone calls.

In the basement, reached by safety steps, are two large complete vaults, massively built like a bomb shelter.

Instead of installing the furnace and fan room of the ventilating system in the basement, this equipment has been placed on the mezzanine floor. Also on the mezzanine floor are the offices of the real estate loan appraisers and recreation rooms for the staff. Here are rest rooms and the cheerful-looking lunch room and lounge equipped with electric stove, refrigerator and many other culinary facilities.

NAMED MANAGER OF NEW KOPPERS FONTANA PLANT

In charge of operations at the new Fontana plant of the Koppers Company when it starts production of the first tar-base enamel pipeline coatings and roofing pitches to be manufactured west of the Rocky Mountains, will be G. E. Traut. Traut, a graduate of the University of Illinois in Chemical Engineering, comes to the West Coast from Everett, Mass., where he has been serving as superintendent of a group of Koppers Tar Products plants.

G. E. Traut, Manager

Koppers Tar Products plants.

The new plant is adjacent to the Kaiser Steel Company plant at Fontana, California, and when construction is completed about the first of the year will employ about seventy-five persons.

NAHB EXPANDS WASHINGTON STAFF FOR BETTER SERVICE

As a means of increasing service to membership, a number of additions have been made to the Washington, D. C. staff of the National Association of Home Builders, according to Frank W. Cortright, executive vice-president.

Jerry Madigan, formerly Executive Director of the Home Builders' Association of Greater Cleveland, has been named NAHB's Field Service Director.

Joseph B. McGrath, former Justice Department trial attorney, has been appointed Assistant Legislative Director.

Everett E. Revercomb, formerly with the National Association of Radio and Television Broadcasters, has been named Assistant Treasurer.

LOUVERED INCANDESCENT LIGHTING SYSTEMS

Look into Skylite modern architectural lighting systems—you'll like what you see! Because Skylite systems are designed to bring efficient, low brightness illumination to every application with an initial cost less than systems providing equivalent lighting. They are equally adaptable to suspended or ordinary ceilings. Exclusive features include relamping from floor, built-in reflector surface, silvered bowl lamps. Available in light output to suit your needs. No ballasts, starters or blinking lamps. Simplicity of construction assures easy maintenance, low upkeep!

OFFICES IN PRINCIPAL WESTERN CITIES • BRANCH AND WAREHOUSE IN SAN FRANCISCO

ARCHITECT SELECTED FOR BRANCH BANK

Harry J. Devine, Sacramento architect, has been selected by the American Trust Company of San Francisco, to design a new branch bank building to be built in Sacramento.

The new building will cost approximately \$150,000.

NO LOTS FOR SALE HERE

A subdivision with no lots for sale is the unique distinction of a co-operative project by 53 members of the University of Southern California in Baldwin Hills.

Containing 17-acres, the subdivision has been two years in development and the

initial construction of 16-homes will be completed this summer.

Southern California faculty and several other educators compose the 53 participants which is headed by Dr. Robert F. Craig.

NEW HOSPITAL AT MODESTO

G. H. Milburn, architect of Modesto, recently announced construction of a 69-bed hospital building for the Modesto City Hospital, which will consist of a 2-story reinforced concrete building, with basement.

Cost of the project is \$275,000.

HIGH SCHOOL STUDENT ARCHITECTURAL WINNER

Wayne Lieu, senior at John Marshall High School, won first place in the recent annual architectural contest sponsored by the East Los Angeles Junior College.

The contest was open to seniors in high schools in Los Angeles county, and was a problem in designing a recreational pool house for a small family including dressing rooms, showers, cooking facilities and lounge area.

Judges of the competition included Marion Varner, Pasadena architect; Dr. Rosco C. Ingalls, college director, and Ray Contreas, member of the college Architectural Club.

TESTIMONIAL DINNER CONSTRUCTION FIRM

More than 100 representatives of every phase of the residential industry in Southern California, attended a testimonial dinner recently honoring heads of the Alden Construction Company, real estate developers.

Tribute was paid to Don Metz, Ira H. Oberdorfer, and Willard Woodrow, heads of the company, for their part in converting large undeveloped sections of metropolitan Los Angeles into home communities.

The firm has built more than \$70,000,000 worth of homes and has a planned program of \$165,000,000 more for its Lakewood Plaza and San Fernando Valley development.

KING CITY HIGH SCHOOL ADDITION

The King City Joint High School District has let a contract for the construction of a \$400,000 addition to the King City High School to contain a gymnasium, and science and commercial units.

The addition is to be one story construction of reinforced concrete, concrete block and frame.

Frank Wynkoop of Carmel is the architect.

STANFORD UNIVERSITY CONSIDERS SHOPPING CENTER

Development of an integrated shopping center on a 60-acre section of land, with

1500 feet fronting on El Camino Real, is being considered by Stanford University, according to a recent announcement by Wallace Sterling, president.

Preliminary plans are being made by Welton Becket, architect of Los Angeles, and Coldwell Banker & Co., San Francisco realty firm.

The program is a part of a project by University Trustees to utilize lands owned by the University.

COPPER PLANT FOUNDATIONS

J. A. McNeil Company of Los Angeles has been awarded a \$2,000,000 contract for construction of foundations for a new copper plant to be constructed at Yerington, Nevada, by the Anaconda Copper Company of Butte, Montana.

The foundations are to be of reinforced concrete.

SAN FRANCISCO HOUSING PROJECT

William G. Merchant, Architect, has recommended to the P.H.A. acceptance of a bid of \$1,560,287 for the construction of 208 units in the Bernal Housing Project, San Francisco.

Construction would include 1-eight story, reinforced concrete building, and 12-three story frame and stucco buildings.

The project is one of several under consideration by the Housing Authority of the City and County of San Francisco.

NEW FACTORY FOR TRACY

The Re-Enforced Paper Company is building three new factory buildings in Tracy. They are of structural steel frame with transite exterior, composition roof and concrete floors.

Wm. Corlett, San Francisco, is the architect.

TELEVISION STUDIOS FOR LOS ANGELES

The initial unit of the Columbia Broadcasting System's new Television City at the intersection of Beverly Blvd. and Fairfax Avenue, Los Angeles, is nearing completion and will be ready for occupancy in October.

When fully developed the project will represent an investment in excess of \$35,000,000 and will feature a 13-story administration building of 600,000 sq. ft. The site contains 25 acres.

Ferreira & Luckman, Los Angeles, are the architects and engineers.

U.S. NAVY SCHOOL OF ENGINEERING

The first unit of the U. S. Navy Postgraduate School of Engineering at Monterey (California) will now be under construction according to an announcement by Skidmore, Owings & Merrill architects for the project.

The initial construction will include some eight buildings and will cost approximately \$4,558,000.

SCHOOL BONDS APPROVED

Voters of the Livermore Joint Union High School District recently approved a special bond issue of \$320,000 with funds to be used for the construction of an addition to the Livermore High School.

John C. Wornecke of San Francisco is the architect.

Cortright said the staff additions mark a milestone in service to association members and will permit increased activities in the Washington field.

NEW LINE OF INSULATION BOARD ANNOUNCED BY KAISER

The Kaiser Gypsum division of Henry J. Kaiser Company recently announced the addition of a complete line of insulating board products to its other building materials.

The insulating products, manufactured in Oregon of wood fibers, includes a variety of insulating boards in many sizes, shapes and colors for interior and exterior construction of homes and commercial buildings; pre-decorated building board, plank and tile for paneling interiors, acoustical tile for sound control, insulating lath as a plaster base, sheathing for exterior walls, and roof insulation.

These products will be distributed through Kaiser Gypsum's existing field organizations in the six western states of Washington, Idaho, Utah, California, Nevada, Arizona, and Alaska and Hawaii.

James Hague, with headquarters in Oakland, California, will be Sales Manager in charge of the Company's insulating products.

TREND OF ENGLISH HOMES IS UP ARCHITECT REPORTS

An Englishman's home is apt to be a walk-up apartment in the Britain of tomorrow, according to Andrew G. Henderson, president of the Royal Institute of British Architects, a recent visitor to American and the national offices of The American Institute of Architects in Washington, D. C.

British cities are growing up rather than out. Britain's constricted area won't allow the sprawling type of American suburb, with single-family houses, and the English would prefer to keep the open country open even if they have to live in flats.

The clearance and redevelopment of "the Victorian belt" encircling the central areas of most British commercial towns is the next step in rehousing, Henderson reported. The post-war years have been occupied in an emergency program, now concluded, of building temporary housing, and in the creation of so-called "new towns," satellites to larger metropolitan centers in England and Scotland. Now Britain can afford the luxury of tearing down a few obsolete buildings in the course of new housing plans.

With all building tightly controlled by the government, a major effort to make the most of what is built has made the British quality-conscious. Medals are given by the government to the cities whose housing projects are best designed. Annual

BOOK REVIEWS

PAMPHLETS AND CATALOGUES

THE PERSPECTOR. By De Postels. Reinhold Publishing Corp., 330 W. 42nd St., New York. Price \$10.00.

A newly developed device, closely related to the book **FUNDAMENTALS OF PERSPECTIVE** and developed by the author Theodore A. De Postels, the Perspector is designed to help architects, draftsmen, artists, and others make accurate perspectives easily and quickly.

Constructed of plastic the Perspector includes angular positions tables for distances of vanishing points from center line. Simple to use and will save many hours of work.

CALIFORNIA CONTRACTORS' LICENSE LAW AND REFERENCE BOOK. The Contractors' State License Board, 1020 N Street, Sacramento. Price \$1.00.

To meet the requirements of those in need of a Reference Book of State Laws affecting the Building Industry this book has been compiled by the Contractors' State License Board. It serves as a quick and easy source of reference for those desiring to familiarize themselves with various California statutes and laws pertaining to the contracting business.

The current issue is the eighth edition, revised. Copies may be secured from the Board or from the Printing Division, Documents Section, State of California, Sacramento.

COLOR IN BUSINESS, SCIENCE, AND INDUSTRY. By Deane B. Judd. John Wiley & Sons, Inc., 440 4th Ave., New York 16. Price \$6.50.

Dr. Judd explains in this book of science and common sense, the difficult subject of the psychophysics of color in practical terms—in terms of the purchase, production, and sale of commodities whose color has an important bearing on their usefulness and price.

Such subjects as use of a spectrophotometer; use of a photoelectric colorimeter; the GE recording spectrophotometer and Beckman spectrophotometer; the fundamental tristimulus colorimetry of color television; value of the Munsell and Oswald color systems; and color tolerances, are thoroughly covered by the author.

Much of the content of the book is the result of questions asked of the author during his 20 years with the National Bureau of Standards. He now holds the position of Chief of the Colorimetry Unit.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

388. BOARD AND BATTEN DATA SHEET. Recommended methods of application and further information on board and batten construction using Redwood is detailed in a new data sheet. The sheet covers the usage of surfaced lumber as well as rough sawn material and several variations of structure are also effected. The economy of batten wall structure in cost of erection and of material is pointed out to architects and home builders and the development of Redwood as the standard material for this type of construction in the west is shown because redwood boards lay flat without the tendency to cup typical of many other species. 7/2/52.

389. FOR THE LIFE OF YOUR HOSPITAL. "For the Life of Your Hospital", a four-page brochure for architects and Hospital planners has been prepared by the Ludman Corporation. Listing various hospital installations and illustrations of medical buildings that have specified and installed Auto-Lok Aluminum windows, the folders explain why Auto-Lok Awning Windows are so frequently prescribed by hospital architects, 4 pages, illus. 6/13/52.

390. LOW ABSORPTION CONCRETE. An integral treatment for producing concrete with low absorption, of special advantage for concrete slabs on the ground not subjected to hydrostatic pressure, such as in housing projects and other low cost construction, has been announced by The Master Builders Co., manufacturers of products for the improvement of concrete and mortar. The bulletin describing this product contains tests from independent laboratories showing that it reduces absorption to less than 2½% for oven-dry specimens. Economic benefits are claimed for projects where specifications accept concrete

with this as maximum absorption, in place of 6" stone or gravel fill covered with membrane waterproofing paper and plain concrete poured on this paper. According to the manufacturer, this product, named Stearolith, resists water because of first, its water-reducing, cement-dispersing action, which lowers porosity; second, its water-repellent stearate, which reduces capillarity and absorption, and third, its reduction of total water content, which increases strength and reduces volume change and volume change cracks. 2 pages, illus. 6/52.

391. WROUGHT IRON IN SERVICE. "Proof by Performance" is the title of an illustrated booklet just released by A. M. Byers Company. The publication describes, in a non-technical manner, a number of installations in which wrought iron gave outstanding service over long periods of time. 8 pages, illus. 2/11/52.

392. LABORATORY FURNITURE FOR SECONDARY SCHOOLS. "UNAFLEX Laboratory Furniture for Secondary Schools," a catalog recently issued by John E. Sjöstrom Company, describes and illustrates the new line at laboratory furniture designed and developed by the company. The catalog outlines the concept and design features of UNAFLEX, a flexible, functional laboratory furniture which was developed to meet the varying requirements of school and industrial laboratories. Included in this amply illustrated catalog are: construction details, standard furniture frames, Unaflex design features, basic laboratory units, dimensions, finished laboratory assemblies, seating arrangements, and other pertinent information on laboratory planning. A.I.A. 35-E, 15 pages, illus. 5/16/52.

393. OIL FIRED EQUIPMENT. Just off the press is a booklet on the complete line of oil fired equipment manufactured by Electro Burner Manufacturing Company. It includes complete specifications and dimensions of the various types of oil burner models, along with their line of water heaters, warm air conditioners and boilers. 8 pages, illus. 5/32.

394. VENTILATION AND AIR CONDITIONING FILTERS. A new illustrated bulletin describing the improved Staynew Ventilation and Air Conditioning Filters has been announced by the Dellinger Corporation, manufacturers of filters for industrial needs. The bulletin contains specifications, engineering and performance data covering various types of filters recommended for the removal of dust and other foreign matter by the impingement method. B 100, eight pages illus., 3/52.

395. STAINLESS STEEL CURTAIN WALLS. A booklet which is an interim progress report on proposed methods of construction using stainless steel curtain walls for immediate consideration by designers, architects, contractors and builders. It is through the cooperation of this group, that, over a two year period, these examples have been developed. They are not the ultimate in design; and architects, engineers, etc., will find ample opportunities to exercise their prerogatives and modify these suggestions to meet the needs of contractors and builders. These designs were evolved by the Sales Development & Engineering Service Department of Allegheny Ludlum Steel Corporation with the cooperation of manufacturers, contractors and architects. A.I.A. 15-H-1, 22 pages illus., 6/6/52.

396. TRANSLUCENT STRUCTURAL PANELS. A new 12-page catalogue completely describing Resolite translucent structural panels of Fiberglas-reinforced plastic, manufactured in eight standard colors and tints has been issued by the producer. In addition to specifications, loading and light transmission values, and other physical characteristics of this versatile building material, the catalogue pictures suggested structural applications with detailed drawings for home or office partitions, patio covering, building facing, industrial skylighting, toilet and shower stalls and other practical uses. Tables list the complete range of standard widths and lengths of the sheets and corrugation sizes available. Such accessories are corrugated mouldings and filler strips, seeling mastic and flashings are also pictured and described.

TREND OF ENGLISH HOMES

(From page 35)

competitions ferret out the best-designed schools. The architect who can make a limited quantity of materials go the farthest gets the palm—and the most business.

Factories are a major part of Britain's post-war building effort. Industrial development corporations, publicly financed but privately managed, build new plants and use subsidies to offer them at low rents to industry. This is a major influence in securing a better distribution of employment and population, and helps end the traditional congestion of British industrial towns.

LOS ANGELES ARCHITECT RESIDENTIAL DESIGNER

Architect William Bray of Los Angeles is designing the homes being built in the new Woodruff Estates subdivision near Los Angeles.

Features of the two-bedroom-with-den or three bedroom homes are double fireplaces, double tile baths, and coordination in the interior decoration. The interiors combine redwood board and batten with cedar shingle roofs.

COMMERCIAL STANDARD FOR STOCK DOUBLE-HUNG WOOD WINDOW UNITS

A proposed Commercial Standard for Standard Stock Double-Hung Wood Window Units has been circulated by the Commodity Standards Division, Office of Industry and Commerce, to manufacturers, distributors, and other interested groups for their view and comment.

The purpose of this commercial standard is to establish standard sizes, layouts, construction requirements, grading, tolerances, and assembly of double-hung wood window units for the guidance of producers, distributors, architects, builders, and the public.

A window unit is composed of a frame, window, weather stripping, balancing device, screen and storm sash, which has been completely assembled into a properly operating unit.

USC ARCHITECTURAL STUDENTS TO DESIGN AND BUILD MODEL HOME

A \$17,000 model home project by students of the University of Southern California School of Architecture has been announced by Dean Arthur B. Gallion.

A grant deed for the lot on which the home is to be built has been given by developers of Rancho Monterey, a 600-house subdivision near Monterey Park.

The home will contain 1440 sq. ft., lot is 66x107 ft., and features include plywood exterior and plastic canopies with rear yard living quarters. Large

ESTIMATOR'S GUIDE

BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight charge, at least, must be added in figuring country work.

BONDS—Performance or Performance plus Labor and Material Bond(s), \$10 per \$1000 on contract price. Labor & Material Bond(s) only, \$5.00 per \$1000 on contract price.

BRICKWORK—MASONRY—

Common Brick—Per 1 M laid—\$100.00 up (according to class of work).
Face Brick—Per 1 M laid—\$200.00 and up (according to class of work).
Brick Steps—\$3.00 and up.
Common Brick Veneer on Frame Bldgs.—Approx. \$1.20 and up (according to class of work).
Face Brick Veneer on Frame Bldgs.—Approx. \$2.00 and up (according to class of work).
Common Brick—\$36.00 per M—truckload lots, delivered.
Face Brick—\$81.00 to \$106.00 per M, truckload lots, delivered.

Glazed Structural Units—

Clear Glazed—
2 x 6 x 12 Furring \$1.60 per sq. ft.
4 x 6 x 12 Partition 1.90 per sq. ft.
4 x 6 x 12 Double Faced 2.25 per sq. ft.
Partition 2.25 per sq. ft.
For colored glass add .30 per sq. ft.
Mantel Fire Brick—\$105.00 per M—F.O.B. Pittsburgh.

Fire Brick—Per M—\$111.00 to \$147.00.

Carriage—Approx. \$10.00 per M.

Paving—\$75.00.

Building Tile—
8 1/2 x 12 1/2 inches, per M \$139.50
6 1/2 x 12 1/2 inches, per M 105.00
4 1/2 x 12 1/2 inches, per M 84.00

Hollow Tile—
12 x 12 1/2 inches, per M \$146.75

Sash cord com. No. 8 3.00 per 100 ft.
Sash cord spot No. 7 3.65 per 100 ft.
Sash cord spot No. 8 3.35 per 100 ft.
Sash weights, cast iron, \$100.00 ton. \$3.75
1-lb. lots, per 100 lbs. \$4.75
Less than 1-lb. lots, per 100 lbs. \$4.75
Nails, per keg, base \$11.80
8-in. spikes 11.80
Rim Knock lugs 1.80
Butts, dull brass plated on steel, 3/4 x 3/16 76

CONCRETE AGGREGATES—

The following prices net to Contractors unless otherwise shown. Carload lots only.

	Bunker per ton	Del'd per ton
Gravel, all sizes	\$2.44	\$2.90
Top Sand	2.38	3.13
Concrete Mix	2.38	3.08
Crushed Rock, 1/2" to 3/4"	2.38	2.90
Crushed Rock, 3/4" to 1 1/2"	2.58	2.90
Roofing Gravel	2.81	2.90
River Sand	2.50	3.00
Sand—		
Lapis (Nos. 2 & 4)	3.56	3.94
Olympia (Nos. 1 & 2)	3.56	3.88

Cement—

Common (all brands, paper sacks), carload lots, \$3.55 per bl., f.o.b. car; delivered \$5.50.
Per sack, small quantity (paper) \$1.05
Carload lots, in bulk per bbl.—2.79
Cash discount on carload lots, 10c a bbl., 10th Prox., less than carload lots \$4.00 per bbl., f.o.b. warehouse or delivered.
Cash discount 2% on L.C.I.

Trinity White } 1 to 100 sacks, \$3.13 sack
Medusa White } warehouse or del.; \$7.56
bbl. carload lots.

CONCRETE READY-MIX—

1-2-4 mix, to 10 yards* \$12.00
10 to 100* yards 11.00
100 to 500 yards 10.50
Over 500 yards 10.30
* Delivered to site.

CONCRETE BLOCKS—

	Hay-dite	Be-salt
4 1/2 x 8 1/2 inches, each	\$17	\$18
6 1/2 x 8 1/2 inches, each	22	225
8 1/2 x 8 1/2 inches, each	26	26
12 1/2 x 8 1/2 inches, each	34	39
12 1/2 x 24 inches, each	—	40
Haydite Aggregates—		
3/8-inch to 3/4-inch, per cu. yd	\$7.25	
3/8-inch to 1/2-inch, per cu. yd	7.25	
No. 6 to 9-inch, per cu. yd	7.25	

DAMP-PROOFING and Waterproofing—

Two-coat work, \$9.00 per square.
Membrane waterproofing—4 layers of saturated felt, \$10.00 per square.
Hot coating work, \$5.00 per square.
Medusa Waterproofing, \$3.50 per lb. San Francisco Warehouse.

Tricoat concrete waterproofing, 60c a cubic yd. and up.

ELECTRIC WIRING—\$15 to \$20 per outlet for conduit work (including switches).

Knob and tube average \$6.00 per outlet.

ELEVATORS—

Prices vary according to capacity, speed and type. Consult elevator companies.
Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about \$9,500.00.

EXCAVATION—

Sand, \$1.00; clay or shale, \$1.50 per yard.
Trucks, \$30 to \$45 per day.
Above figures are an average without water. Steam shovel work in large quantities, less; hard material, such as rock will run considerably more.

FIRE ESCAPES—

Ten-foot galvanized iron balcony, with stairs, \$250 installed on new buildings; \$300 on old buildings.

FLOORS—

Asphalt Tile, 1/8 in. gauge 18c to 35c per sq. ft.

Composition Floors, such as Magnesite, 40c-1.25 per sq. ft.

Linoleum, standard gauge, sq. yd. \$2.75

Mastipave—\$1.50 per sq. yd.

BattleShip Linoleum—1/8" — \$3.00 sq. yd.

Terazzo Floors—\$1.50 per sq. ft.

Terazzo Steps—\$2.50 per lin. ft.

Mastic Wear Coat—according to type—

20c to 35c.

Hardwood Flooring—

Oak Flooring—T & G—Unfin.—

	1/2 x 2 1/4 1/2 x 2 1/4 1/2 x 2 1/4	3/4 x 2 1/4 3/4 x 2 1/4 3/4 x 2 1/4

ARCHITECT AND ENGINEER ESTIMATOR'S DIRECTORY

Building and Construction Materials

EXPLANATION—Building and construction materials are shown in major classified groups for general identification purposes with names and addresses of suppliers of materials listed in detail under group classification where name first appears—main offices are shown first with branch or district offices following. The numeral appearing in listings *[3] refers to the major group classification where complete data on the dealer, or representative, may be found.

CENTRAL CALIFORNIA CHAPTER, ASSOCIATED GENERAL CONTRACTORS OF AMERICA, with the assistance and cooperation of secretaries of General Contractors Associations and Builders Exchanges of Northern California; and the above information for southern California is furnished by the Labor Relations Department of the Southern California Chapter, ASSOCIATED GENERAL CONTRACTORS OF AMERICA.

ARCHITECTURAL STUDENTS

(From page 38)

sliding glass panels are included in the design which calls for three bedrooms and a bath and one-half.

Large kitchen and serving spaces are provided for. A warm air convention and radiation perimeter heating system is to be featured.

SAN GABRIEL VALLEY AREA POPULATION GAIN SHOWN

A \$203,000,000 building expansion has brought more than 20,000 new families to the western San Gabriel Valley in the last five years, nearly doubling the population of some communities, according to a recent survey conducted by the Los Angeles Times.

More than 77 per cent of the area's \$203,680,300 building growth, as indicated by valuations of building permits issued, has been in residential development. Some 22,000 dwelling units have been built since January 1947, and a majority of these have been single-family homes.

ADVOCATES INAUGURATION OF CONSTRUCTION PLANS

Architects, engineers and others who have had to defer non-defense construction projects because of government restrictions are being urged by the American Institute of Steel Construction to proceed with working drawings.

In a recent communication to more than 10,000 architects, engineers and designers, L. Abbott Post, executive vice president of the Institute, pointed to recent government actions easing restrictions on many kinds of non-defense construction projects.

PROJECTS AT SANTA BARBARA COLLEGE GIVEN APPROVAL

The National Production Authority has granted clearance for the construction of the first two permanent buildings on the campus of Santa Barbara College of the University of California.

Robert E. Floyd, planning engineer in charge of development of the new campus, reports working drawings for the Library and Science buildings have been completed and with some seventy converted former military buildings, will constitute the initial part of the new 408-acre campus site overlooking the Pacific Ocean.

The new library will have 42,000 sq. ft. of floor space, and the science building 39,600 sq. ft. Both structures are being funded out of a \$4,000,000 allocation previously made for the new Santa Barbara College.

HOLLYWOOD JUNIOR

COMBINATION
SCREEN and METAL SASH DOOR

★
The "WEATHER-WISE"
DOOR!!

A VENTILATING SCREEN DOOR

A SASH DOOR

A PERMANENT OUTSIDE DOOR

ALL 3 IN 1!

Discriminating home owners and architects have chosen Hollywood Junior as the TRIPLE DOOR VALUE in the COMBINATION SCREEN and METAL SASH DOOR Field! A sturdy dependable door, constructed of quality materials, HOLLYWOOD JUNIOR'S EXCLUSIVE PATENTED FEATURES have outmoded old-fashioned screen doors and other doors of its type entirely!

Built-in telephone facilities mean happier clients for you

That's why so many building plans today include built-in telephone facilities. Clients like the idea of having conduit for concealed telephone wiring, and extra telephone outlets conveniently located to take care of future telephone installations and changes. Modern homes are hardly complete without the low-in-cost, high-in-satisfaction advantages of planned telephone facilities.

Just call Pacific Telephone's free Architects and Builders service. They'll be glad to help you plan telephone facilities for better living tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone

IN THE NEWS

PULP PLANT FOR ALASKA

The Ketchikan Pulp Company of Ketchikan, Alaska, has started construction of a new pulp plant at Ketchikan which will cost \$45,000,000 when completed and equipped for manufacturing.

The project will include reinforced concrete buildings, dams, water line, and wharf.

ELEMENTARY SCHOOL BONDS APPROVED

Bonds for construction of an addition to the elementary school at Santa, California, were recently approved by voters of the Santa Elementary School District.

Some \$149,000 will be spent in construction of 4 classrooms, kindergarten and toilets.

GROUP OF NEW RESIDENCES

Lacey & White, Inc. of San Francisco, are constructing 175 new homes in the Lake Chabot Highlands, Alameda County, at an estimated cost of \$10,000 each.

Paul R. Williams, Los Angeles, is the architect. Construction will be of frame and stucco, each house to contain 1000 to 1200 sq. ft.

NEW SCHOOLS FOR MANHATTAN BEACH

The architectural firm of Daniel, Mann, Johnson & Mendenhall of Los Angeles, has been commissioned by the Manhattan

Beach School District to draft plans and specifications for the construction of a new junior high school and an elementary school building.

Estimated cost of the project is \$467,000.

TERMINAL STRUCTURE SOUTHERN CALIFORNIA

Allison and Rible, architects, are completing plans for the construction of a new \$500,000 terminal building in Los Angeles for Transcon Lines, motor freight carriers.

The building will house terminal offices, dock areas, maintenance shops and parking area for 220 vehicles.

DOCTORS OFFICE BUILDING

Architect J. K. Ballantine of Berkeley has been retained by Dr. H. E. Catteratta and Associates of Reno, Nevada, to design a new doctors office building.

Of one story, and basement, brick and frame construction the project will cost \$101,300.

COLLEGE OF PACIFIC BUILDS NEW LIBRARY

The College of the Pacific, Stockton, California, will soon start construction on a new two-story reinforced concrete library building on the college campus at Stockton, to cost \$250,000.

The building will have a brick veneer exterior. Architect Clarence W. W. Mayhew of San Francisco is the architect.

NEW FIRE STATION

Everett E. Parks and Gates W. Burrows, associate architects, are architects on a new two-story central fire station being built by the City of Santa Ana at a cost of \$300,000.

The building will also provide for the city's expanded fire alarm system, and will serve as downtown fire headquarters.

NEW FACTORY BUILDING

The Forym Seed Company building at 500 Paul Avenue, San Francisco, has been purchased by the Planters Nut and Chocolate Company and will be converted into a new manufacturing plant for Planters products, at an estimated cost of \$1,000,000.

H. J. Brunner, Structural Engineer of San Francisco, is in charge of the 5-story, plus basement, remodeling project.

GOLDEN STATE TO REMODEL CREAMERY

The Golden State Company, dairy product distributors, is constructing an addition to their plant at Gridley, California. Arshen & Allen, San Francisco, are the architects.

HIGH SCHOOL BONDS VOTED AT JACKSON

Voters of the Jackson Union High School District, Jackson, California, recently approved a bond issue of \$189,000 for construction of an addition to the Jackson High School.

Koblick & Fisher, Sacramento, are the architects.

LICK OBSERVATORY GETS NEW TELESCOPE

The Lick Observatory, located on top of Mt. Hamilton in Santa Clara County near San Jose, will soon have a new 120 inch telescope, according to an announcement by the Board of Regents of the University of California.

The Judson-Pacific-Murphy Corp., Emery-

ville, is installing the structural steel for the telescope.

HALL OF RECORDS NEW ADDITION

The Board of Supervisors of Contra Costa County recently approved \$396,214 for construction of an addition to the County Court House in Martinez to be used for a Hall of Records.

E. Geoffrey Bangs, Architect, San Francisco, is designing the addition which will be another one-story to the present three-story building.

NEW HEAT CIRCULATING FIREPLACE UNIT

Two new modern and correctly designed heat circulating fireplace units have been announced by the Superior Fireplace Company of Los Angeles.

One is the HEATFORM Model M, and the other is the HEATFORM Model S, which is of Swedish design, with front and one end open to provide greater view of fire. The design of the throat and downdraft shell, plus properly located damper, prevents downdraft air currents entering the throat, thus creating smoke-free operation, and capturing the heat before it is lost.

Specially fabricated, easily installed—complete data in "Heatform Fireplaces" literature from manufacturer.

NEW MACY'S STORE FOR SAN MATEO

Working drawings have been started by Welton Becket, architect of Los Angeles, for the construction of a \$4,000,000 Macy's Department Store building in the Hillsdale Shopping Center of San Mateo.

The building will contain 2-stories and basement and will be of reinforced concrete and brick.

NEW RESIDENTIAL SUBDIVISION OPEN

The Contractors Investment Co., Inc., of San Fernando Valley have opened their new home development project in Holly Glen.

The first unit consisting of 58-three bedroom, or two-bedroom and den dwellings, has been designed by architect Paul Duncan.

The homes are priced at \$12,450 to \$14,950.

ARCHITECT SELECTED

Architect John C. Warnecke of San Francisco has been commissioned by the Richmond Union High School District to draft

plans and specifications for construction of a new junior and senior high school at El Sobrante, Contra Costa County.

The new buildings will comprise 28-classrooms, administrations, science, home making, art, commercial, music, crafts, library, multi-purpose, kitchen, three shops and toilets.

Of frame and stucco construction the project will cost \$1,600,000.

FARM STYLE HOME FOR LOS ANGELES EXPOSITION

The Town and Country, a 1565 sq. ft. model home designed in California contemporary farm style by Paul J. Duncan, A.I.A., architect of Los Angeles, has been selected as the "model home" to be built and exhibited as a part of the 1952 Home Show at Hollywood Park.

Less garage and porches the 1565 sq. ft. figures includes spacious living room, dining area, kitchen, two baths, two bedrooms, den and service area. It is in the \$20,000 price range.

FACTORY SITE PURCHASED

The Aluminum Body Corp of Vernon, California, manufacturer of aluminum truck and trailer bodies, has purchased a three-acre site in Montebello where it plans to build a new \$150,000 factory.

The plant will include a 25,000 sq. ft. factory; a 1500 sq. ft. office building, and a 1500 sq. ft. shed.

SCHOOL BONDS APPROVED

Voters of the Mountain View Elementary School District, Santa Clara County, California, recently approved a special School Bond Election authorizing \$295,000 for the construction of an addition to the Westlake School.

Improvements will include four class rooms, multi-purpose rooms and other improvements.

CALIFORNIA CENTER FOR CIVILIAN DEFENSE

The State of California, thru the Division of Architecture, Department of Public Works, is building a new 1-story building in Sacramento to be used as the state headquarters for Civilian Defense.

The new office building will contain 20,000 sq. ft. and will be of structural steel, metal roof, and concrete.

METALLIC PAINTS SHOULD NOT BE USED

The use of non-metallic paint for the spring decorating program for radiators, baseboards, and convectors is advised by the Plumbing and Heating Industries Bureau.

Metallic paints such as aluminum bronze or gold may cut the heating effect of radiators, baseboards, or convectors as much as 20 per cent, the Bureau reports.

ARMY ENGINEERS MAPPING ALASKA

Substantial savings in time and money are being made by the Army Corps of Engineers by the use of helicopters in its current military mapping operations in Alaska.

Fifteen helicopters are used to carry surveyors and equipment over treacherous muskeg and rugged mountains which normally would offer difficult land travel.

During the 1951 season 24,000 square miles were surveyed in 81 days, setting a new record for this type of work.

New Colors...soft-toned and function fitting now yours in real clay *Suntile*

WHAT THESE COLORS MEAN TO INDUSTRIAL PRODUCTION

Buff Hauteville 724

Suntile

BUFF HAUTEVILLE 724

A practical color of widespread use

Buff always has been a favorite ceramic tile color. Suntile now has added an attractive subdued mottled and extremely hard surface which give Buff added advantages. Buff Hauteville is one of the best colors

where light may be on the dim side or where bright, clean environment is needed. It probably should not be used where critical seeing tasks are performed. However, in large wall areas, corridors, stairwells, locker rooms, boiler rooms, lavatories and gymnasiums and in manufacturing areas of foundries, machine shops, food and chemical plants, Buff Hauteville is ideal. The mottled finish resists soiling and does not require "mirror-clean" maintenance. This is but one of the new Suntile line of functional colors developed by Faber Birren, outstanding color authority, and The Cambridge Tile Mfg. Co.

Production has increased both in quantity and in quality!

This is the usual report you'd get if you visited an industrial plant where functionally correct colors have been selected for walls and floors.

Color fitted to the function of industrial interior helps reduce accidents, aids lighting and saves eye strain, increases employee morale and efficiency, decreases absenteeism. In short, the *right* color can be a valuable aid to any production process.

Now, with Suntile, you have colors that have been scientifically developed to aid the design and purpose of building interiors...of manufacturing and processing plants, of schools, hospitals, and other institutions, of offices and commercial buildings.

You get more than functionally correct colors with real clay Suntile, however. You also get low maintenance and upkeep, permanence, resistance to fire, economy and ease of cleaning.

Our new color booklet, "Suntile Functional Color Recommendations," describes the Suntile functional color line, tells you how to use color to greatest advantage. See your local Authorized Suntile Dealer, write our Dept. AE-8 for a copy. The Cambridge Tile Mfg. Co., P. O. Box 71, Cincinnati 15, Ohio

SUNTILE OFFERS YOU BOTH • BETTER TILE • BETTER INSTALLATION

Tile Talk

BY HERMOSA

Someone once said, "Architects speak a language all their own." That may be, but architects also speak in many languages to many people.

Their "alphabet" is made up of materials they use to spell out mankind's progress. One of the most frequently used materials in the architectural "alphabet" is real clay tile. From ancient Babylon to modern times, architects have said many things with this beautiful, basic material.

★ ★ ★

Hermosa real clay tile has an illustrious background. It is the modern counterpart of one of man's oldest materials. Today architects use it to epitomize contemporary living at its best.

It is one material that resists the ravages of time—that can take abrasion, food acids, boiling water or flame. It never fades or stains or dulls with age.

★ ★ ★

Best of all, Hermosa tile is available in a wide range of colors, textures and sizes. Standard decorative tiles and insert panels range from traditional and provincial to contemporary. Architects frequently design original motifs—have them custom-fitted by Gladding, McBean craftsmen.

Hermosa tile is equally at home in kitchens (walls and drainboards) or bathrooms (pullman lavatories, floors and walls) on a fireplace facing, or hospital floors and walls—wherever a structure requires beauty, permanence, sanitation and utility. Can you think of another material that does so many things so well?

The New
SUNSET FIREHOUSE
San Francisco

A good example of modern municipal building design and construction that conforms to community planning is this new Fire House by Architect J. S. Gould for the Fire Department of the City and County of San Francisco.

Situated in a small homes residential area the rather large building's appearance is in keeping with the adjacent houses.

EDITORIAL NOTES

NATIONAL HOME BUILDING WEEK

National Home Week was originated by the National Association of Home Builders in 1948, and each year an expanding nation-wide celebration has been built around the theme of Home Ownership.

It has been an event where the entire home building industry, material distributors, lumber yards, home financing institutions, realtors, utility companies, appliance dealers, home furnishers, and allied interests have shown their wares to the public.

Model homes have been specially built for the occasion. On-site demonstrations of streamlined building techniques and services have been held. New appliances, equipment, building materials and household furnishings have highlighted displays from coast-to-coast, and people by the tens of thousands have turned out to view these demonstrations, and to learn how modern homes are built and purchased.

While sponsored on a nation-wide scale, each locality observes its own event although collectively they all accomplish the same purpose—to make the public more aware of the great advantages of home ownership in America and the desirability of well equipped, well planned new homes.

National Home Week will be observed this year from September 14 through the 21st.

The Federal government has taken more money from the taxpayers during the Truman Administration than during all other administrations combined, and one-third of all the money ever spent by the United States has been spent in the past six years by this administration.

PUBLIC HOUSING SALESMEN

Travel expenses provided for the Public Housing Administration in the Independent Offices Appropriation bill which has passed the House amount to \$620,000. Another \$492,000 is earmarked for travel in other units of the Housing and Home Finance Agency, including \$210,000 for the Office of Administrator.

Why so much for travel? Well the Monroe, Mich., Evening News describes a hearing before its city commission back in 1950 on a public housing project in these terms:

"What was shocking and amazing in the hearing of the project before the city commission . . . was the case of one of the three federal men who attended the meeting and remained on their feet throughout the hearing to talk for the project when-

ever occasion offered." The man in question told the community that the project wouldn't cost it a cent, among other things. The paper went on to call him a "federal salesman."

That's what the appropriation apparently means when it authorizes the \$620,000 for "expenses of travel and expenses of attendance at meetings of organizations concerned with the work of the Public Housing Administration."

DO YOU REALLY CARE?

The cold facts and figures "on the record books" show that in 1948 some 48,680,416 votes, the largest total ever, were cast in the General Election—but, that this tremendous as it may seem vote, was only 51 per cent of the eligible votes. 49 per cent of the nation's eligible voters did not cast their ballot.

In the General Election of 1880, some 78.4 per cent of eligibles voted.

Sol The records tell us that during the past sixty-eight years "our" interest in the nation's General Elections has shown a continuous decrease for no apparent or good reason . . . with one exception—during that period of time women won their right to vote. Could it be . . . no, we don't think so.

Politicians talk a lot about this and that "bloc" of voters being decisive factors in any election, and that they will be of great importance in the General Election on November 4th. So do all the pollsters and you can't blame anyone for trying to dope out the trend of results of an election in advance, BUT,

YOU, for instance, know right now that you are going to vote your own sweet way when you get behind that voting booth curtain—that where you live or work hasn't got a thing to do with how you will vote. As a good citizen of the best nation in the world, you will vote for what you sincerely believe to be in the best interests of your family, your kids, and your kids' kids.

So YOU KNOW NOW that this year, as always, it will be the FAMILY vote that really decides things.

The FAMILY VOTE, Not the farm vote, not the big-city vote, not the labor vote, not any particular party vote, WILL ELECT the next president of the United States.

Right now in millions of American families, everyone from Little Sis to Grandma is pitching in to remind every eligible American TO REGISTER to make sure of the opportunity to vote.

YOU can do your part by being SURE you are registered to vote—then go to work on your friends, relatives, and neighbors to make certain they are registered and can also vote.

PRACTICAL BEAUTY *of Colorful Clay Brick* *... a "natural" for* **GOLDEN GATE PARK**

PUBLIC reluctance to allow the building of any structure to mar the beauty of Golden Gate Park was one of the most important factors in the selection of materials for McLaren Lodge. Colorful Clay Brick adapted itself beautifully, both to the simple, modern architectural motif and to the natural park landscape. Joints are deepcut to give sharp shadow lines and the brick is laid in continuous horizontal, vertical joints.

Another demonstration of "inside or outside—
a Clay Brick wall, best finish of all."

NEWS and COMMENT ON ART

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, offers the following schedule of exhibits and events during the month of August:

EXHIBITIONS: Paintings by Wassily Kandinsky; the Texas Wildcat; Printing for Commerce; Modern French Color Lithographs; Walter Gropius, Architect and teacher; Paintings and Prints from the upper Midwest, and American Federation of Arts Exhibition; and Paintings by John Ferren and Frederick Franck.

SPECIAL EVENTS: Concerts Seventh Annual Campion Festival, August 21, 25, 26 and 28; Lectures each Sunday at 3:00 p.m., and Wednesday evenings at 8:00 p.m. All adult and childrens classes have been recessed for the summer.

17th CERAMIC NATIONAL SYRACUSE MUSEUM OF ART

Artists, designers, and architects who specialize in ceramics and enameling will have an opportunity to exhibit their work in the 17th Ceramic National which is being sponsored by the Syracuse (New York) Museum of Fine Arts, the Onondaga Pottery Company, and the Ferro Corp., and will be exhibited this fall.

Awards totaling \$2450 will be made in the fields of ceramic sculpture, pottery, enamels, and dinnerware design. A special architectural citation will be offered for the best example of the use of ceramic sculpture as an integral part of an architectural plan. Judges of the architectural award will include J. Byers Hays, F.A.I.A., Cleveland; and Ivan Mestrovic, Professor of Sculpture, Syracuse University.

Entries must be sent to the Syracuse Museum of Fine Arts, Syracuse, N. Y., by September 18.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, offers three outstanding exhibitions during August.

Scheduled to highlight the month's activities are Retrospective Exhibition Paintings by Abel G. Warshawsky; Retrospective Exhibition of Paintings by Karl Zerbe; and Old American Coverlets, an exhibition from the Collection of the Museum.

Classes in Art Enjoyment for Adults, conducted

by Charles Lindstrom, are held Saturday morning at 10:30 and Wednesday afternoon at 2:00 o'clock. Classes in Art for Children are held Saturday mornings, Friday afternoons, and Thursday afternoons, depending upon age of the child.

UNIVERSITY OF CALIFORNIA FACULTY ARTISTS HONORED

Works of eight faculty members of the University of California at Los Angeles department of art have been included in a show entitled "Eight Painters, Eight Objects," which will tour the western part of the nation under the sponsorship of the Western Association of Art Museum Directors.

This is the second time that an exhibit by members of the U.C.L.A. art faculty has been selected by the association for sponsorship. The first, organized in 1950, is still on tour.

Eight still-life objects were selected and each of the following artists made two or three paintings to show various versions of the same object: Mrs. Brown, Clinton Adams, William Bowne, William Bradshaw, Annita Delano, Erlan Eller, Gordon Nunes, and Jan Stussy.

OAKLAND TO PRESENT PACIFIC ART FESTIVAL

The Pacific Art Festival, a non-profit group headed by Guernsey Ford, has announced the group will hold Oakland's First Annual Art Show in the Oakland Exhibition Building from October 1 to 5.

The show will include outstanding examples of painting by artists of the three Pacific Coast states as well as representative exhibits of sculpture, architecture, landscape architecture, music, drama, ceramics, weaving, photography, wood carving, and other arts and crafts.

A feature designed to give variety to the show will be house and garden models, art is action, short lectures by art authorities and skits by dramatic groups.

CITY OF PARIS

The Rotunda Art Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, presents the Summer Annual Print Exhibition during August. Included in this year's exhibit is a group of Serigraphs, Lithographs, Colored Etchings, and Monotypes by well known French and Eastern and Western American artists. A special showing of Chuckwagons and Cowboys,

(See Page 45)

CALIFORNIA STATE BOARD OF ARCHITECTURAL EXAMINERS

When the California State Board of Architectural Examiners met in San Francisco recently, two new members were welcomed to the board by President Earl Heitschmidt, A.I.A., architect of Los Angeles.

The two new members, at right in above picture, are George P. Simonds, A.I.A., architect of Oakland, and Ulysses Floyd Rible, A.I.A., architect of Los Angeles. Other members of the board are Norman K. Blanchard, A.I.A., architect, San Francisco (left to right); Clarence Paderewski, A.I.A., architect of San Diego; and Earl Heitschmidt, A.I.A. of Los Angeles.

The board met in joint conference in San Francisco with the State Board of Registration for civil and Professional Engineers to study possible revisions for the Licensing Act in order to clarify overlapping sections covering architects and engineers.

NEW ARCHITECTS FOR CALIFORNIA

The California State Board of Architectural Examiners recently announced the following for certification in the practice of architecture in the state.

John C. Absmeier, Jerry P. Braveman, George B. Carey, Jack Chernoff, Aaron Cohn, Raymond H. Cooper, Victor A. Cusack, John C. Deardorff, Edward L. Farrell, Donald S. Gill, Dolf H. D. Koldehofe, Delbert E. Long, Isabel M. Miller, Avon Pitman, Vick C. Santochi, Maxwell Starkman, Toshikazu Terasawa, Zell S. Van Myers, and Clyde L. Whitlow, all of Los Angeles.

Rex W. Allen and Robert S. Oliver, Jr., Mill Valley; Cleon M. Arnold, Jr., Clarence M. Baker, Frank J. D. Beatty, Richard C. Marshall, Warren H. Radford, Willard D. Rand, Jr., and Harry J. Squeri of San Francisco; John R. Badgley, San Luis Obispo; Richard A. Bohn, Jr., San Leandro; Robert W. Campini, Oakland; Richard N. Clatworthy, and Marvin C. Johnson, Van Nuys.

John G. Clay, San Rafael; Delbert H. Cole, Lemon Grove; Glenn E. Cook, Alhambra; Robert P. Danielson, Dawson F. Dean, Jr., Lyman C. Jee, and William L. Jeffries, Berkeley; Clare H. Day, and Harvey R. Jernigan, San Bernardino; Oleg J. Devorn, Sacramento; Henry Dupertuis, Jr., Merced; Raymond L. Eggers, Grant King, and Fred E. Norris, San Diego; John F. Galbraith, Temple City; George C. Gravlee, Visalia.

Wendell M. Harbach, James A. Hewlett and Arthur L. Jacobson, Riverside; John C. Hoops, Corte Madera; Fred T. Houwelling, Burlingame; David T. Johnson, Albany; Gayne L. Jones, Carmel; Willard T. Jordan, Costa Mesa; Edward B. Kress, Los Gatos; George Kuska and John H. Waterman, Salinas; Howard R. Lane, North Hollywood; Allen Y. Lew, Fresno; George de Masirevich, Santa Monica; Judson W. Pittam, and William C. Sponholz, Pacific Palisades; Richard L. Poper and Jack J. Strickland, Long Beach.

Gordon F. Powers, Seal Beach; David A. Pugh, Sausalito; Arthur A. Smith, Gardena; Waugh Smith, Redondo; William A. Steele, Jr., Santa Rosa; John A. Taras, Pacific Grove; Ward B. Whitman, Santa Barbara; George E. Wilson, Santa Paula; Peter G. Wuss, San Jose; Donal D. Engen, Culver City; Alfred T. Smith, Monrovia; Raymond C. Wiltaker, Davenport, Iowa; and Victor A. Lundy, New York City.

COLLEGE OFFERS A NEW HOME BUILDERS COURSE

Trinity University at San Antonio, Texas, will inaugurate the nation's first Bachelor of Science degree in Home Building when classes are resumed at the school this fall.

The full four year course will emphasize mathematics, business, English, and social science the first two years, with the second two years being devoted to a study of materials, construction, equipment, utilities, production techniques, design, planning, estimating and cost control, financing and merchandising, and home building organization and objectives.

ASBESTOS FACTORY FOR SANTA CLARA—Keasboy & Matison of Ambler, Pa., has started construction of a new 1-story asbestos factory building in Santa Clara, California. The building will contain 77,000 sq. ft. and will cost \$1,500,000 to construct.

The 12-story Security Building in Denver, Colorado, is believed to be the tallest building ever remodeled with architectural porcelain enamel. The installation has proved the possibilities of porcelain enamel for multi-story modernization, the Porcelain Enamel Institute reports.

PRESIDENT'S OFFICE

ARCHITECT AND ENGINEER

LIGHTING

Window wall and provisional overhead lighting provide maximum light for clerical space. Window overlooks patio which will be landscaped.

Cecil J. Birtcher, president and founder of the company, aware of the need for improving the visual pattern of industrial America and recognizing that progress is being made in this direction principally in large-scale industrial building and reconstruction where greater resources make possible unlimited use of architects and engineering specialists, utilized the services of architect, landscape engineer, building and construction engineer and interior decorator in building for his small scale industrial organization.

It was believed that through the services of building design specialists a superior building would result without substantially increasing con-

struction costs. In addition to pre-planning for an efficient flow pattern operation, other advantages would follow.

Among these would be the building of good public relations; attracting more and better workers; increasing both the employee's and community's pride in the company; and indirectly but no less important, increasing neighborhood realty values. These factors Birtcher felt, would more than offset any additional cost of services employed. As a matter of fact, it was anticipated that by using the services of construction industry experts a substantial reduction in costs would result.

The architectural building program was for a

"A"—Administrative area. 1) President's Office, 2) Clerical, 3) Dual Purpose Room, 4) Landscaped Patio; "B"—Manufacturing area, 5) Engineering Department, 6) Final Testing, 7) Car Port, 8) Truck Pick-up Finished Products for Shipment, 9) Finished Stock, 10) Supplies, 11) Recreation Lounge and Rest Rooms, 12) Plastic Mold Work Area, 13) Truck Delivery Raw Material.

OFFICE - FACTORY BUILDING . . .

Corrugated glass partitions along interior corridor wall diffuse light and give feeling of spaciousness.

complete plant for the administration, manufacture, and shipment of equipment with a national and international distribution, of sufficient size to meet present needs as well as expandable for future requirements. Close cooperation with the architect existed in all phases of the building program. Executives, department heads, and factory superintendents joined in the planning sessions.

"This," Birtcher executives say, "is an essential factor in the well-integrated and successful all-in-one motion which resulted. The channeling of administrative effort; facilities for display and demonstration of our highly technical products; and personnel considerations were given the most thorough consideration and became determining factors in the final overall design of the building.

"The production manager and factory supervisors played an equally important part in the planning of the shop area."

For economy and flexibility the shop space was planned in an open rectangle. Only one area, other than the employees' lounge and rest rooms, is entirely closed off. This is the space where plastic molds are made and while dust particles from this operation are not great, the nature of the products manufactured demands a completely dust-free working area.

Air circulation and temperature control, contrived to provide airy and comfortable work space, has been accomplished by application of engineering principles of air travel. The administrative section is completely temperature controlled. Lighting, which is another important consideration in

AIR VIEW OF PROPERTY

Photo by Wm. A. Garnett

... OFFICE - FACTORY BUILDING

close precision work, received attention to provide maximum lighting for difficult seeing tasks that involve discrimination of fine detail. Throughout the entire plant materials and construction provide easy maintenance and economy in up-keep.

Attractive restrooms and general purpose room for lunch and recreation with full kitchen facilities make for a homelike and pleasant atmosphere for the employee.

The plant is basically separated into two units, 1) the manufacturing, and 2) the administrative, with easy access of various departments to one another. Strategically placed midway is the engineering department. Manufacturing faults which show up in final testing are checked back with the factory superintendent or made subject for revision. Matters for executive attention go forward to the president's office which occupies a central position in the administrative section, for ready control and coordination of the various departments.

In the administrative section similar consideration of personnel is reflected. One entire window wall provides maximum light to the clerical space. Interior color selection and textures, and light reflection received careful study for employee psychology. Here, too, attractive restroom facilities, and lounge rooms are of the highest standard. A complete kitchen unit opens on the corridor leading to the patio. Cecil Birtcher points out that many contemporary houses provide for outdoor living as

Dual purpose conference-display room, with revolving-eye ceiling lights for emphasizing displays. Room may also be used as auditorium, conferences, and showing of motion pictures.

an important auxiliary to the house. So the new building has an open patio, partially enclosed by the walls of the building to provide privacy and seclusion, with attractive outdoor furniture, as an outside "living room" for the employees.

The residential character is everywhere empha-

(See Page 40)

AFTER

CONVERSION TO DOCTOR'S OFFICES

BEFORE

A REMODELED DOCTOR'S OFFICE BUILDING

DONALD LASTRETO, M.D.
SAN FRANCISCO, CALIFORNIA

ARCHITECTS— BOLTON WHITE, A.I.A.
JACK HERMANN, A.I.A.

CONTRACTOR:- PAYNE CONSTRUCTION CO.

INTERIOR
Showing a
portion of
waiting
room and
secretary's
private
office area.

A DOCTOR'S OFFICE BUILDING . . .

Waiting Room — viewed from secretary's private office.

THE PROBLEM:

To de-centralize medical practice, i.e. from a downtown to a suburban site—in this specific instance to the Visitacion Valley business district of San Francisco, California.

THE SOLUTION:

Dr. Donald Lastreto purchased an existing building in a good location for his purpose. This was because of the scarcity of proper vacant lots. For fullest use, the lower floor was used for Dr. Lastreto's offices. The second floor was designed to accommodate a Dentist, an Optometrist, and two Attorneys as rental tenants. The location of the building is near a growing industrial area, a hospital, and the doctor's patients.

A common entrance emphasizes the dignity of the building and provides a simple circulation. There are, in addition, a separate entrance to Dr. Lastreto's office and a rear entrance to both floors. The receptionist controls the waiting room and the movement of incoming and outgoing patients. A central corridor permits easy circulation within the working parts. The doctor's office and consultation room is in a position of first access with an adjoining examination room. The examination rooms are simple and workable with built-in cabinets and sinks. The X-ray facilities

are of the best to make accurate and complete diagnosis, even though they are concentrated into a minimum space. A separate pair of cubicles was arranged to provide for pediatrics cases. The laboratory has facilities necessary for routine analysis and refrigerator built into the counter.

MATERIALS:

In general, the materials were selected for practicability and permanence. The exterior is colored stucco. The interior is colored plaster. Glazing is obscure ribbed glass. Floor covering is asphalt tile. Waiting room is finished with natural birch.

COLORS:

The exterior is golden ochre and turquoise with white trim. The interior is varied with the emphasis on cheerful colors.

FEATURES:

Full-height glass in dental operating rooms to the north. The economical idea of building a structure with part rented to pay off the investment, and at the same time acquiring a pleasant working environment. Storage elements. Waiting room detailing.

HEATING:

Hot water convectors have been placed under the windows.

SECOND FLOOR

LABORATORY

Has been designed to offer a maximum in general utility use, but requiring a minimum of space.

CLARE K. HAMLIN, Architect

By ARTHUR W. PRIAULX

All the easy informality of a home garden has been introduced into office and commercial building design in a charming development in downtown Eugene, Oregon.

Architect Clare K. Hamlin has achieved a delightful and charming effect in a three-building open courtyard plan on an over-large quarter block.

The two-story Cascade office building with exterior corridor entrances on both ground floor and

balcony levels emphasizes the unconventional theme, which is further heightened by the western red cedar walls which face the court.

Second of the three-building development is the single-story structure on the corner of the property finished also in red cedar which houses a receiving office for the Club Cleaners.

Customer parking space, which fits into the formalized garden landscaping, occupies all available space in addition to a parking strip along one

alleyway. Another projected two-story office structure to be identical with the Cascade Building is yet to be built. The two office buildings will form an ell facing the courtyard and will have continuous balcony connections.

The \$75,000 Cascade Building is a combination reinforced concrete and heavy timber bent frame construction. End walls of the rectangular structure

are reinforced concrete and the architect designed these walls in checkerboard pattern on a four-by-four foot scale with alternate coffered or recessed panels. They are finished with a green-colored dash.

The long walls are built of rough-sawn, tongue-and-groove, red-cedar siding stained a cedar red. The structure is built up of a series of similar eight-

More of the ceiling detail can be seen here . . . an office on the ground floor.

Timbers are left exposed. Ceiling has been covered with an acoustical tile.

Close-up view of the exterior corridor on ground floor of the Cascade Building with detail of roof section which becomes balcony corridor.

. . . GARDEN COURT BUSINESS CENTER

foot bays and six-by-ten inch rough Douglas fir timbers form the bent frame. A solid concrete slab forms the ground floor. Second floor and roof is rough two-inch, tongue-and-groove fir planking or decking. In some rooms the decking has been covered with acoustical tile, but in many of the rooms the rough decking has been left exposed, as have the rough, exposed timbers throughout the two floors.

Plank and beams have been slightly stained to cover dirt marks and provide a uniform coloring. Interior columns on both floor levels are steel pipe, and exterior columns are all eight-by-eight inch fir.

Us of the exterior corridors had a three-fold purpose; first to gain as much useable space in the building as possible without loss to hallways and corridors, second to design the structure to get two full walls of light, and third to create a building which would best fit into the garden-court plan.

Both exterior corridors are open, but covered areas, the balcony corridar forming the roof for the

Space used in this compact office building has been studiously arranged for maximum utility of all floor area available.

An office lobby which emphasizes the home-like atmosphere which the designer has achieved throughout the building.

GARDEN COURT BUSINESS CENTER . . .

Part of a three room suite for attorneys on ground floor featuring Western red cedar panelling in each room.

lower level and a roof sheltering the balcony exterior entrance-way. A heavy pipe and rough-fir timber balustrade lines both corridor arcades. All offices on both floors open directly onto the exterior corridor.

Heating of the structure is done by a combination of two systems, a radiant hot-water system and an over-head-duct, forced-air system, which becomes an air-conditioning unit in summer.

Only commercial concession in the building's exterior is plate glass for all offices on the courtyard exposure. Casement-type aluminum sash windows provide daylight on walls away from the court.

The roof is a built-up type. A fibre-glass, insulation is laid first on the rough decking, with only a felt membrane against the wood, and the composition paper is laid on top the insulation.

All offices in the building have been finished in native west coast woods, with West Coast hemlock panelling predominating. All walls and partitions have been built up of vertical panelling, mostly flat grain hemlock of eight- and ten-inch widths

Another room of the cedar suite which points up the warmth of the reddish natural finish of cedar.

Typical office finished in West Coast hemlock panelling. Roof decking becomes ceiling and timbers of frame exposed to create attractive finish and contrast with the panelling.

Combination full height partitions and partial partitions show possible variations of office arrangements to accommodate private office requirements and general office needs.

GARDEN COURT BUSINESS CENTER . . .

with a Boston-edge, beveled joint. All partitions reach to the beam line, and all partitions are non-bearing and can be moved to suit individual office requirements.

The hemlock panelling has been finished simply to bring out the natural golden color of the wood. A wipe paint finish with a golden tint was the first coat, followed by two or more applications of rez and varnish.

A three-room suite on the ground level, occupied by attorneys, has been finished in flat grain western red cedar panelling with several coats of clear varnish holding the original cedar color. The rooms have the beauty of a well-planned library and one of the attorneys says of his offices: "This is the first time in years of practice that I have found working can be fun. I enjoy my office as much as I do my home."

An insurance office has been laid out with five-

foot-high walls of brushedwood plywood forming attractive divisions between private offices.

One reason Architect Hamlin has elected to leave the rough-fir plank ceilings exposed in most offices is that the rough wood forms an acceptable acoustical medium, especially where carpeting is used on the office floors. Fluorescent lighting is installed throughout the building.

Economy factors also entered into the selection of the exterior corridor design, Architect Hamlin indicated. The outside entrance corridor does not require the expense of heating, nor the expense of enclosure, and it permits of two walls of windows for all offices.

By eliminating the non-productive corridor space from the enclosed portion of the building, a construction cost of about \$10 a square foot was realized in the Cascade Building, Hamlin stated.

Utility rooms, furnace rooms, supply and janitor

Exterior corridor from balcony level, with overhanging roof to provide ample shelter from winter storms or summer sun.

. . . GARDEN COURT BUSINESS CENTER

storage and rest rooms for both levels are located in a short wing and are reached from each office by the exterior corridor. The roof deck has been constructed for flooding if desired.

The single-story Club Cleaners office has been designed to fit into the general informal scheme and as a companion structure to the Cascade and projected second office building.

It, too, is a concrete and timber structure with exterior walls of western red cedar and interior finish of cedar with a small amount of hemlock. Pipe columns form the interior supports. Roof is plank, tongue-and-groove fir on bent timber frame.

An attractive roofed-in breeze-way shelter enables customers to drive in out of the weather and affords protection while loading and unloading. The breeze-way is part of the court ward.

General contractor for the Cascade Building was Elmer Bissell, of Eugene. Contractor for the Club

Cleaners was Albert Vik & Son.

The immediate impression and effect on the visitor to this courtyard and garden-type layout for commercial buildings is relaxing. Two large cedar trees have been left in the courtyard and the breeze-way roof is built around one of the giant trees. The over-all effect is disarmingly informal and an altogether welcome departure from the usual straight and stiff lines which are associated in the minds of most people with commercial and office buildings. A large Oregon maple tree has also been allowed to remain on the property and Architect Hamlin worked it into the Club Cleaner plans by building the projecting roof section around the tree trunk.

In a city like Eugene, where the people love their shade trees, the garden-court office building seems a happy solution as the business area spreads cut into the close-up residential district.

Viewed from the street the Cascade Building retains its informal design features and the Club Cleaner Building, at right, carries out a central theme of the garden court. Note the cedar and walnut trees on the site which have been retained.

SAN FRANCISCO ARCHITECTURAL CLUB

The San Francisco Architectural Club has announced plans for Fall classes in a number of subjects including Structural Engineering—a course designed to cover all phases of engineering for architects and to prepare students for the structural section of the examination of the State Board of Architectural Examiners.

Art in Architecture will be a 12-week course in art as applied to classic and modern architecture. Mural painting sculpture, and decorative problems will also be studied.

The Architectural Design Atelier, for Club members only, engages in the study of architectural design under the guidance of local architects. Design problems are under the auspices of the Beaux Arts Institute of Design and are generally of five weeks duration.

Estimating and Quantity Surveying is a course designed to increase the knowledge of everyone in the Building Industry in taking off quantities and estimating from preliminary and working drawings.

The course in specifications is a complete course in preparing specifications for residential and commercial structures, and Sketching is a course to aid students in developing a technique in render-

THE ILLINOIS SOCIETY OF ARCHITECTS

The Illinois Society of Architects, at its 55th An-
nual Meeting recently in Chicago, elected the fol-
lowing officers for the ensuing year:

William Paul Fox, Chicago, President; Benja-
min F. Olson, Chicago, 1st Vice-President; A. Rey-
ner Eastman, Rockford, 2nd Vice-President; Virgil
E. Gustafson, Chicago, Treasurer; Alfred F. Schi-
mek, La Grange, Secretary; and Gerald L. Palmer,
Chicago, Financial Secretary.

Members of the board of directors include F. M.
Bernham, Chicago, and T. Clifford Noonan, Wile-
mette.

The Illinois Society of Architects was organized
in 1897 and sponsored the first registration law in
the United States for architects.

SAN FRANCISCO ARCHITECT NAMED TO STATE BOARD

Norman K. Blanchard, AIA, Architect, San Fran-
cisco, has been reappointed to the California State
Board of Architectural Examiners by Governor
Earl Warren.

Blanchard, a partner in the architectural firm of
Blanchard & Maher, will serve a four-year term.
He was first appointed to the Board in 1948 and
served as its president in 1950.

ANNUAL CONVENTION AMERICAN INSTITUTE OF ARCHITECTS

Nearly 2000 architects from all parts of the world
gathered in New York City the latter part of June to
attend the 84th Annual Convention of The Ameri-
can Institute of Architects.

Five full days and nights were devoted to busi-
ness sessions, sight-seeing trips and entertain-
ment. It was the architects first meeting in New
York since 1925, and meetings were held through-
out the city's outstanding points of interest.

Among awards made by the Institute were rec-
ognition to manufacturers in the field of building
products for cooperation rendered the architect-

INFORMATIONAL MEETING

The Palace Hotel was the scene of the last regular informational meeting on July 14, at which time Charlie Nicholas of the Bastian Morley Company, assisted by Herb Lemkau of the Crane Co., presented a program on "The Importance of Hot Water Heating" in custom built homes. Herb Lemkau is the manager of the heating department of the Crane Co. and he discussed some of the recent installations in which radiant baseboard panels were used. We were advised that this type of heating is becoming increasingly more popular in the low cost home as well as the large home of today. Indicative of the interest in this field was the capacity attendance of sixty-eight members and guests at this meeting.

AWARD FOR U. C. SCHOOL OF ARCHITECTURE

It is probably not too well known, but the Producers' Council for the past two years has presented an award of \$50.00 to an outstanding post-graduate student of the School of Architecture at the University of California in Berkeley. This award is given to enable the post-graduate student to

purchase the beginning of his reference library which he will use while practicing in the profession.

The award this year was presented to Mr. Gerald McCue, Berkeley, California, at the Annual Award Dinner for the School of Architecture. Presentation was made by Mr. Herb Duncan of the Natural Gas Equipment Company.

Mr. McCue who was awarded his masters degree at the last graduation was the runner up to the A.I.A. award to the most outstanding post-graduate student. We are advised by the Committee on Scholarship and Fellowships of the School of Architecture that Mr. McCue is a very outstanding young architect and that the choice between Mr. McCue and the winner of the A.I.A. post-graduate award was very difficult.

EXECUTIVE COMMITTEE MEETING

At the last Executive Committee Meeting, President Al West talked about his trip East during which time he attended the National A.I.A. Convention and some of his comments bear repeating

(See opposite Page)

USE QUALITY PRODUCTS

CONSULT AN ARCHITECT

for your reading. Al stressed the point that the San Francisco Chapter of the Producers' Council is known nationally for its fine informational meetings and for its wonderful position in the eyes of the architects.

This is a most enviable position to be in and is the result of the fine work done by our presidents in the past and the result of the work done by the individual members of the organization.

Our Chapter admittedly is not the largest in the country, but we do feel that our meetings and all our activities are conducted in accordance with the highest standards and good taste.

Ours is a question of quality and not of quantity, and to maintain this enviable position, and to keep the trust and good faith of the profession, it will require continued careful attention of all members as well as the executive organization.

As our individual memberships in the Producers' Council is one of selfish interest, it is not only to the benefit of the entire Chapter, but to the benefit of the individual members to continue this fine relationship.

1952 ANNUAL CONVENTION

As you all know, the Annual Convention is to be held at Yosemite National Park on October 9 to 11, and if any member has not applied for the necessary reservations, they are urged to do so, as these reservations are filled on a first come, first served basis. The forms can be obtained from Howard Noleen, of the E. F. Hauserman Company.

tle in 1953, Boston in 1954, Minneapolis in 1955 and Washington, D. C. in 1957.

The national organization of the Producers Council, manufacturers of building materials, will hold its annual convention also concurrently and upward of two thousand delegate registrations are expected. The theme of the convention is scheduled to feature new construction and design trends and it will include tours of television, radio and motion picture studios, freeways, new housing projects and community centers. Post-convention trips to Hawaii, Mexico and the national parks are also included in the schedule of events.

SAN DIEGO CHAPTER

H. V. Simpson, executive vice president of the West Coast Lumberman's Association, and C. J. Ramstrom, manager of the Los Angeles office of the same organization, were speakers at the July meeting. They discussed the subject "The Magic of Lumber" and presented a color, sound-movie on the Douglas Fir, West Coast Hemlock, Sitka Spruce and Western Red Cedar lumber industries.

Don Campbell called attention to the Producers Council barbecue in Los Angeles on September 9th.

Plans were made for an architectural exhibit at the San Diego County Fair with Ray Jung in charge.

JAPANESE INSTITUTE OF ARCHITECTS REPRESENTED

Dr. Shigeni Ito, president of the Japanese Institute of Architects, was one of the speakers at a meeting of the newly-organized Far East Society of Architects, held in Tokyo.

Forty-five Japanese architects were guests of the society at a session which was attended by more than forty American military and civilian architects.

SOUTHERN CALIFORNIA CHAPTER PRODUCERS COUNCIL

Bert Taylor of the Pittsburgh Plate Glass Company was elected president of the Southern California Chapter of the Producers Council at the group's annual meeting.

Other officers named to serve during the 1952-53 year were: G. Robert Roden, Jr., Truscon Steel Company, vice-president; Malcolm G. Lowe, Natural Gas Equipment Inc., secretary; Richard Seaman, W. P. Fuller & Co., treasurer; and Vern Boget of the Gladding, McBean & Company was named National Director.

operations for The Federal Housing Administration with offices in Washington, according to a recent announcement by Walter L. Greene, Commissioner.

Askew was chairman of the FHA commissioner's special field committee during 1950. He will have administrative control and direction of 137 field offices throughout the country and Alaska, Hawaii and Puerto Rico.

AMERICAN INSTITUTE OF STEEL CONSTRUCTION

The American Institute of Steel Construction has announced that winners of ten \$1000 scholarships in civil engineering include George J. Strom of Oakland, California (sponsored by the Schrader Iron Works of San Francisco).

Winners were selected from a group of 80 high school seniors nominated by 46 steel fabricating companies throughout the nation. A winner may attend any one of 125 accredited colleges in the country offering a degree in Civil Engineering.

The Illinois Institute of Technology is constructing a nine-story apartment building for staff members and students. The 96-unit building will cost \$1,085,000 and will not be completely ready for occupancy until 1953.

INTERNATIONAL ARCHITECTS ATTEND A.I.A. CONVENTION

Among numerous architects from other countries attending the 84th Annual Convention of The American Institute of Architects in New York City recently were Robert S. Morris, President of the Royal Architectural Institute of Canada; Carlos Lazo, President of the Mexican Society of Architects; Giovanni B. Ceas, President of the Italian Section, International Union of Architects; Carlos P. Villanova, prominent architect of Venezuela and Preben Hanson, architect of Denmark.

MYRON HUNT, NOTED CALIFORNIA ARCHITECT, SUCCUMBS TO ILLNESS

Myron Hunt, A.I.A., Architect, died at his Pasadena, California, home on May 26th following an illness of two years.

For more than half a century Myron Hunt played an important part in building design and civic betterment throughout southern California and the West. He was active for many years in The American Institute of Architects and the Pasadena Chapter.

STRUCTURAL CLAY PRODUCTS CHIEF VISITS WEST COAST BRICK INDUSTRY

Douglas Whitlock, of Washington, D. C., Chairman of the Board of the Structural Clay Products Institute, met with representatives of the industry

Good Lighting

as important as your most important tool!

Just imagine the level of production you'd get in a black-out plant—or with illumination that is inadequate or worked only at whim. It's important—as important as fine tools and skilled men—to make sure your plant is equipped with lighting that won't let you down!

Smoot-Holman lighting equipment is built to specifications that do not compromise with quality. Whenever called upon, it dependably delivers the right amount of illumination in the right places. It relieves eye-strain, reduces fatigue—promotes accuracy on close tolerance jobs.

You take pride in your equipment and workers—why not add to their performance with Smoot-Holman lighting?

Yes, we're proud of our precision "tools" too. Here saw metal is being treated against rust and corrosion in one of the finest high temperature chemical baths in the Nation.

in San Francisco recently and accompanied members of the local clay brick and tile group on a tour of Northern California plants.

High point of the visit was a luncheon meeting at the Palace Hotel attended by 17 principals from all plants in the area. Important industry-wide problems discussed include Pacific Coast Techniques in reinforced grouted brick masonry, the new "SCR brick" developed by the Structural Clay Products Research Foundation and new developments in wall scaffolding.

The recent Earthquake Engineering Research Institute meetings held at UCLA and Massachusetts Institute of Technology were also discussed along with General industry matters and the coming annual convention of the industry, to be held this year in Bermuda.

CONSERVATION SCHOOL BUILDINGS

(From Page 27)

instruction. This, after all, is the reason for the school and its task in the community.

There is another phase of this subject of conservation when it comes to planning and design. For this, I shall refer to that definition given in the fields of Physics and Chemistry to the word "conservation":

"Conservation is the principle that the total mass of any material or form is a quantity which can neither be increased or diminished by any action between the parts."

I am going to twist this meaning a bit, and say that it is conservation in school planning to design a building which may be capable of great flexibility. Its functions and parts may change, but the original building will not have to be diminished or increased.

We have seen great changes in educational methods. More are to come, as we progress by experience.

Who can say that what we are doing today in the classroom is the final word and the pattern to be followed during the life of the building? In recent years classrooms have been approaching the square form rather than the traditional rectangular form. We have found many advantages in this, including the cost of construction. But with new ideas and new equipment, classroom shapes and sizes perhaps should change some more.

Some schools built now for children of the elementary grades may be needed in the future for secondary education as the great mass of lower grade children progress into junior high and high schools. This will require a different size classroom or a re-arrangement of rooms within a building.

Since the future of the program may not be fixed rigidly now, it is conservation to plan the building for flexibility, with a rigid frame capable of housing within it a wide number of variations in the use of space. Such conservation may add somewhat to the original cost of construction, but it has already proved itself in many cases to be true conservation. There are a number of school buildings which have been replaced or are standing idle in this country, representing large investments, be-

cause they were not designed to permit economical changes in the use of the space within the building.

In addition to providing flexibility within a building it is essential to consider the location of the building on the site. The usual considerations of prevailing winds, site drainage, accessibility and orientation are not to be overlooked or minimized, but equally important, is the consideration of expansibility of the school as a whole within a given site. Careful planning for future expansion may eliminate the necessity for acquiring more land that might prove expensive. Efficient utilization of site is a conservation measure.

Now we reach the last point of conservation in schools, and the most important of all—conservation of the health, vigor, enlightenment, and ideals of our youth.

This is no place for a plea for public education, even if a plea were needed, which certainly is not the case. Nor do I ask my fellow architects to pray or weep with me for the future of our country.

But we face daily practical problems in design which do have a bearing on the future generations. Take lighting, for example.

Dr. Charles Sheard of the Mayo Clinic estimated that with normal vision under good lighting conditions we use 25% of our energy doing visual tasks.

The child has only so much energy. If he is called upon to spend more than a quarter of it just seeing and trying to concentrate on the materials before him on his desk, or on the chalkboard, we have robbed him of energy for other things—for growth, for fighting infection, for movement, for organic functions, and all of the other claims made upon him.

Proper lighting then, is a conservation measure for the health and learning progress of the child. The same is true of sound control, and of heating and ventilation. Energy expended to overcome physical discomfort reduces the remaining pool of energy upon which he needs to draw for proper growth and development.

The child of today is subject to many pressures resulting from our modern way of life. The concentration of people in the urban communities, rapid transportation, the restlessness of the modern family, impose a strain upon the energy resources of today's school child.

By providing a proper physical environment within the school we conserve the time and health of our children, and thus contribute to their educational progress, their ideals, their vigor, their enlightenment.

We must make this investment in the younger generation if we are to give them the physical and educational opportunity to develop the great stamina, the vision, and the leadership to cope with future problems which may be even more severe than those thrust upon us.

"Conservation" then is what we really are driving at, when the school board, the administrator, and the architect sit down together to design a school. The educational program does not come from us, but as architects we must be able to offer to the school authorities the best we know, and can devise, to house this program in such manner that it will conserve our financial and human resources to the greatest extent possible.

NEW BRICK HOMES. Structural Clay Products Institute, Washington 6, D. C. Price 50 cents.

A new planbook containing plans for forty-five modestly-priced brick homes, and representing a cross-section of modern architectural styling, has been published by the Structural Clay Products Institute.

Plans reflect the trend in American home owners' taste and include a number of one-story ranch style designs. The book contains pictures of various homes built throughout the nation. Suggestions for modern and traditional construction are offered.

DATA BOOK FOR CIVIL ENGINEERS. Vol. 1. DESIGN 2nd EDITION and Vol. 2. SPECIFICATIONS and COSTS 2nd EDITION. Publisher John Wiley & Sons, Ltd., 440 Fourth Avenue, New York. Price Vol. 1, \$10.00 and Vol. 2, \$13.00.

DICTIONARY OF ARCHITECTURE. By Henry H. Saylor. John Wiley & Sons, Inc., 440 Fourth Avenue, New York 16. Price \$4.50.

The author is Editor of The Journal of The American Institute of Architects, FAIA, FRGS, and a registered architect in the State of New York.

The book contains 190 pages of architectural words listed alphabetically with references to a 31-page section of illustrations in the back of the book. It is a valuable book for students, architects, engineers, contractors and anyone interested in the construction industry.

CABINS AND BEACH HOUSES. Lane Publishing Company, Menlo Park, California. Price \$1.50.

The publishers of Sunset Magazine have issued this book on Cabins and Beach Houses, which contains 63 workable plans for camps, cabins, and beach houses plus a wealth of practical how-to information on all different phases of getting "that place in the country."

Plans range from simple storage lockers just large enough to hold a family's camping gear, to many-roomed beach and woodland houses that could easily be transplanted to a city site. Practical information covers how to find a cabin or beach house site, financing, insurance requirements and availabilities, basic building requirements, snow load specifications for high country cabins, building materials, how to build your own access road or driveway, interior arrangement and "built-ins," and a lot of other useful information.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

397. DIRECTIONAL LIGHTING CATALOGUE. A new catalog has been issued by the Eagle Manufacturing Company to introduce their SKANDIA directional lighting fixtures. These metallic, accent lights are adjustable for direct and indirect lighting, for wall and ceiling mountings. They come in a choice of four styles—with bullet, diagonal, commercial or megaphone cones in individual units or in clusters. Color is natural aluminum, brass or copper. Finish is baked lacquer, including seven unique ceiling-drop fixtures with numerous residential and commercial possibilities. 8 pages.

398. GLASS IN SANDWICH PANEL CONSTRUCTION. Cellular glass in construction is described in a new brochure recently published by the manufacturer. The folder contains information about the advantages of this material in concrete sandwich panels for various types of buildings—textile, food production, electric power, chemical processing and housing. 4 pages.

399. MANUAL FOR THE DESIGN OF BOX-PLENUM TYPE AIR CONDITIONING DUCT SYSTEMS. This manual has just been issued by the Committee on Domestic Gas Research of the American Gas Association and is known as Project DGR-2-AC. It suggests some simple, inexpensive types of air duct systems that will have efficiencies equal to some of the higher cost systems now in use. The booklet gives a number of illustrations, charts and tables. 18 pages.

400. CENTRAL CONTROL PANEL SYSTEM. New Barber-Colman Bulletin outlines a technique for use in designing economical automatic electric control installations for heating and air conditioning systems. Central Control Panel technique simplifies installation, reduces over-all costs, minimizes service, increases system flexibility, and assists engineers in preparation of specification diagrams. 8 pages, illus., FS265, 7/9/52.

401. RADIANT HEATING LIGHT. A new folder on the Electriglas Thermolite is available. The folder shows the uses of this 3 way light on its application as a heater, light or as both. It also includes information on the Hi-panel heater and base board panel heaters produced by the Appelmon Art Glass Works. 4 page folder, illus., 6/52.

402. STUDLESS METAL LATH AND PLASTER 2 INCH SOLID PARTITION. Released by the Metal Lath Manufacturers Assoc. is a new leaflet covering the new type studless partition. More and more architects are conserving steel by eliminating channel studs from the popular space-saving two-inch solid metal lath and plaster partitions thus saving up to 44 per cent by weight of the widely demanded material. Tests conducted by the Metal Lath Manufacturers Association proved that a studless partition retains the same rugged, crack-resistant properties of a metal lath partition with studs. In recent months this studless partition has been featured in some of the largest modern housing developments in the United States. Detroit's Douglas Housing project and San Francisco's multimillion dollar Park Merced project are good examples of recent multiple residences which feature the use of this lightweight partition. Contractors have stated that in addition to saving material costs, the studless partition is simpler to erect thus reducing labor costs. AIA 20-B-1, 4 pages illus., 6/52.

403. WALL AND CEILING PANELS. A revised, 8-page, full-color catalog on Marlite plastic-finished wall and ceiling panels and all other Marsh products is available now for those interested in remodeling or new construction. New this year and a feature of the up-to-date catalog, are seven Marlite Wood-panels plus new finishes on the plain colors, horizontal-line, and tile patterns. Marlite prefinished wallpanels are now available in two finishes: Deluxe and Hi-Gloss. Deluxe specifies a special top-quality wallpanel with a hand-polished finish. Hi-Gloss is the designation for a high-quality, low-cost panel with a high-lustre, mirror-like finish. The seven Marlite Wood-panels, (silver walnut, blond mahogany, gray prima-vera, natural walnut, striped mahogany, light oak, natural prima vero) which authentically reproduce the beauty and coloring of fine, fully-finished wood grains, are shown in color with the five Marlite Marble Panels. In addition to the 67 striking color and pattern combinations fully illustrated in the newly revised catalog, are institutional, commercial, and residential interior photographs of Marlite installations; a new section of metal mouldings, including Marsh color-matched mouldings; Marlite installation accessories, installation instructions, and specifications. AIA 23-L, 8 pages illus., 6/52.

404. ELEVATOR ENTRANCE DESIGN. Two new pieces of literature illustrating elevator door and entrance designs have been issued by the Architectural Products Division of the Otis Elevator Company. "Ornamental Designs" is booklet illustrating 18 basic decorative door designs, applied to both single-slide and center-opening or two-speed elevator doors. The folder, "Special Entrance Designs", reproduces renderings of 42 distinctive elevator entrance treatments for single rare and groups of two or more elevators. 8-812, 8 pages illus., 6/52.

405. DISAPPEARING STAIRWAYS. Announcement of a new catalog is made by the Bessler Disappearing Stairway Co. This literature illustrates and describes the seven models in the complete Bessler disappearing stairway line, adaptable to any residence needs. The catalog shows the many installations and types of use that the product can be recommended for. 22n-Be, 4 pages illus., 7/52.

CARL S. BAUMAN PROMOTED BY STANLEY WORKS

Carl S. Bauman, sales representative in Delaware, Maryland and the District of Columbia, has been appointed assistant general sales manager for The Stanley Works of New Britain, Conn., according to a recent announcement by George P. Merrill, general sales manager.

In his new position Bauman will be responsible for assisting, directing, and supervising the field sales organization and will generally assist Merrill with the "definition and accomplishment of sales objectives."

ENGINEER ACCEPTS PERUVIAN ASSIGNMENT

Dr. Parker D. Trask, research engineer in the department of engineering on the Berkeley campus of the University of California, has accepted an assignment with the Peruvian government and is now in South America.

Dr. Trask will conduct a geological investigation in conjunction with development of water resources in Peru.

OFFICE-FACTORY BUILDINGS

(From Page 13)

sized throughout the building. The dual-purpose conference and display room also reflects this feeling. Designed with sales' sessions in mind, furnishings are functional and easily lend to group seating arrangements, without loss of beauty of design or luxury of appointments.

In addition to careful planning for up-to-the-minute production efficiency, great consideration has been given to overall appearance to effect a pleasing and creditable addition to the neighborhood—of which a part is the small-home development close by.

The building itself is of a design compatible with California landscape, suitable to a manufacturing plant, and of unusually attractive appearance. Monotony of line, so frequently found in utilitarian office-factory construction, has here been broken by a covered parking area on one side and an open, centrally placed patio on the other.

"In a dynamic economy such as ours," Cecil Bircher says, "and with the most highly developed technology in history, even smaller scale industrial organizations are vitally concerned in the building facilities of their company.

"We think we have achieved a worthwhile goal in our new building—the best possible working arrangement, suited to the needs of our work-activities, and to the need for the best possible morale of our employees—which will return to us excellent dividends."

ESTIMATOR'S GUIDE

BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight charges, at least, must be added in figuring country work.

LEONARD HOBBS ELECTED A ILLUMINATING SOCIETY OFFICER

Leonard A. Hobbs, vice president in charge of sales and public relations for the Smoot-Holman Company of Inglewood, California, has been elected Regional Vice-President of the Illuminating Engineering Society for the South Pacific Coast Region.

The Illuminating Engineering Society was founded in 1906 and its present day membership of 7600 illuminating engineers and lighting specialists is divided into ten regions.

ARCHITECT MOVES OFFICE

Architect Joseph Esherick of San Francisco, has moved into new offices at 2065 Powell Street. He was formerly located at 442 Post Street.

NEWS & COMMENT ON ART

(From Page 8)

representing a series of prints of the Southwest, by Theodore Van Soelen, is also presented.

The Pictures of the Month will feature Animals and Fantasy in Oils, Watercolors, and Textiles for Nurseries and Children's Rooms.

CALIFORNIA SCHOOL OF FINE ARTS

Annual awards of the Albert M. Bender Grants-in-Aid have been made by trustees of the Bender Memorial Trust for the tenth and last time.

Winners of the \$1500 each stipend are Robert Neuman and Lundy Siegfried in the field of Painting; Milton Lott and Varley McBeth in Literature; and Dody Warren and Philip Hyde in Photography.

All of the winners are residents of the Bay Area except Dody Warren who resides in Carmel, Calif.

AFRICAN ART ON TOUR

A permanent loan exhibition assembled by the Segy Gallery of New York is on tour and has

been scheduled for the following showings on the Pacific Coast.

The California Palace of the Legion of Honor, San Francisco; Rosicrucian Egyptian Oriental Museum, San Jose; Henry Gallery at the University of Washington, Seattle; San Joaquin Pioneer Museum, Stockton, California; the Tacoma Art League, Tacoma, Washington; and the Erb Memorial Gallery, the University of Oregon, Eugene.

Other Western showings include the University of New Mexico, Albuquerque.

Built-in telephone facilities will add an "extra" to your building plans

It's so easy to make planned telephone facilities a part of your building plans. And clients will appreciate the extra finish that built-in conduit for concealed wiring and conveniently located telephone outlets lend to their home. The cost of installing such facilities is surprisingly low... and it costs nothing to make them a part of your building plans.

Just call Pacific Telephone's free Architects and Builders service. They'll be glad to help you plan telephone facilities for better living tomorrow in the homes you build today.

Put built-in telephone facilities in your plans

IN THE NEWS

ARCHITECT SELECTED

Architect George E. Ellinger of Oakland has been chosen by the American Trust Company, San Francisco, to draft plans and specifications for the construction of a new branch bank in Oakland.

Estimated cost of the new building is \$32,900.

SPARKS HOSPITAL ADDITION

Architect Russell Mills of Reno, Nevada, has been commissioned by the State of Nevada to design an addition to the Nevada State Hospital at Sparks.

The new building will comprise a laundry, kitchen, commissary, cafeteria, and a new boiler room.

COUNTY OFFICE BUILDING

The Sutter County Board of Supervisors recently authorized the expenditure of \$498,887 for the construction of a new County Office Building in Yuba City.

The new building will be of 1 story, reinforced concrete construction and will contain 27,000 sq. ft.

Harry J. Devine of Sacramento is the architect.

CAST STEEL FOUNDRY FOR OAKLAND

The General Metals Corp. has been granted a certificate of necessity for the construction of a new cast steel foundry building in Oakland.

The new plant will contain 125,000 sq. ft.; will be of structural steel frame and reinforced concrete, and will cost an estimated \$5,000,000.

McClellan & MacDonald of Los Angeles are the architects.

ARCHITECT CHOSEN SCHOOL BONDS VOTED

Architect Ben F. Lippold of Fresno has been chosen by the West Side Union High School District, to draft plans and specifications for the construction of an addition to the High School at Los Banos.

Voters of the district have approved a bond issue of \$275,000 for the work.

AVIATION IMPROVEMENTS UNDER WAY IN NEVADA

The U. S. Navy, through the Public Works Office in San Bruno, California, announced recently the construction of improvements

to the McClellan Field at Fallon, Nevada.

Most of the money spent in improving the field and a number of buildings.

ARCHITECT LIBRARY SERVICE AVAILABLE

Restoration of the Library of Architecture and Allied Arts has been completed under the direction of Mrs. Gene Alexander, librarian.

Several hundred new books, periodicals, pamphlets and handbooks have been added to the library which is located at 3723 Wilshire Blvd., Los Angeles.

The library is open from noon to 5 p.m. Monday through Friday and from 7 to 11 p.m. Wednesdays. Architect David Witmer, AIA, heads the board of directors of the 25-year old library.

ARCHITECT SELECTED

The architectural firm of Sorenson & Ellsworth, Mark Ellsworth, AIA, and Larue Sorenson, Hospital Consultant has been chosen by the Washington Township Hospital District of Niles, to design a 50-bed hospital to be constructed near Niles.

The building will be of reinforced concrete and steel.

NEVADA ARCHITECT ON SCHOOL PROJECT

Architect Richard Stadelman & Associates of Las Vegas are preparing plans for two new schools. One to be built at the Westside School site in Las Vegas, a 14-classroom, cement block structure; and another on the North 9th street school site, a 6-classroom, cement block building.

HOWARD W. NOLEEN GETS APPOINTMENT

Howard W. Noleen, salesman for the E. F. Hauserman Company since 1947, has been appointed district manager of the company's San Francisco office according to an announcement by Fred M. Hauserman, company president.

Noleen succeeds William Hauserman, recently transferred to Los Angeles.

A native of Minneapolis, Noleen is vice president of the Northern California Chapter of the Producers Council.

UNIVERSITY OFFERS PLUMBING COURSE

The National Association of Master Plumbers in cooperation with the State University of Iowa is now offering a scholarship for special training in those phases of engineering which are applicable to the plumbing industry.

Scholarships are available to a limited number of properly qualified sons of association members.

HOSPITAL BOND ELECTION LOSES

A special election to provide \$600,000 in bonds for the construction of a new wing and 104-bed addition to the Sonoma County Hospital at Santa Rosa was recently defeated by voters.

The proposed addition was to have been 2 story and of reinforced concrete construction.

NEW SAN CLEMENTE CONTRACTORS GROUP

Les F. Smith has been elected president of the newly organized San Clemente Contractors Association.

Other officers include F. S. McGurk, first vice president; Walter E. Wrightman, sec-

ond vice-president; John Miller, secretary; and J. G. Douglass, treasurer.

SEWAGE TREATMENT PLANT FOR AIR FORCE

The Corps of Engineers, U. S. Army, recently announced plans for the construction of a new sewage treatment plant for the Stead Air Force Base near Reno, Nevada.

SCHOOL BONDS APPROVED

Voters of the Woodland High School District recently approved a school bond issue of \$975,000 with funds to be used in the construction of a new East Yolo Branch High School building.

The new building will contain 12 classrooms, administration, science, business, home-making, library, cafeteria, shops, toilets, and a combination gymnasium and auditorium.

CONTRACTORS IN THEIR NEW SAN JOSE BRANCH

The Santa Clara Valley office of the Peninsula General Contractors and Builders Association is now located at 75 Bassett Street, San Jose.

Increased building activity in Santa Clara county necessitated opening the new offices, according to Association officials. Open house was held early in July.

ALCOHOL PLANT FOR SACRAMENTO

A N.E.A. permit has been granted and work will soon start on a \$12,273,000 plant in Sacramento for the Procter & Gamble Company of Cincinnati, Ohio.

Construction will include a refinery, stills, and a control building.

NEW LAW LIBRARY FOR LOS ANGELES

Construction of Los Angeles County's new \$1,129,900 law library in the Los Angeles Civic Center has been started and according to city officials will represent one of the foremost of such buildings in the nation when completed.

It will be four stories in height and will contain 33,000 sq. ft. Austin, Field & Fry are the architects.

RENO BUILDS NEW MARINE CORPS RESERVE BUILDING

The U. S. Navy, Public Works office, has announced construction of a new \$46,000 Marine Corps Reserve administration building at the Navy Reserve Training Center in Reno, Nevada.

The building will be 40 x 100 ft. on a concrete slab foundation.

NEW CHURCH AT TURLOCK

Architect John C. Anthony of Oakland has been commissioned to design a church and Sunday school building for the Methodist Church of Turlock.

The new building, costing \$150,000, will be of brick and frame construction.

SCHOOL CAFETERIA FOR CULVER CITY

Construction of a complete school cafeteria and dining unit for the Culver City Unified School District has been announced by Jack Singer, Superintendent.

Designed by Daniel, Mann, Johnson & Mendenhall, Los Angeles architects and engineers the project will cost \$378,000.

BANK SITE PURCHASED

The Bank of America has purchased a site on Del Paso Blvd., in North Sacra-

**DEPARTMENT STORE
FOR WALNUT CREEK**

The MacDonald Products Company of San Francisco will build a new building in the Broadway Shopping Center of Walnut Creek, Alameda County, for Capwell's Department Store of Oakland.

The project will cost in excess of \$1,000,000. Plans are being prepared by Welton Becket & Associates, architects, Los Angeles.

**ARIZONA AIRPORT
PROJECTS ASKED**

Airport construction projects totaling \$538,000 for Phoenix, Tucson and Douglas have been asked by Secretary of Commerce Sawyer.

The three cities are listed among 140 airport projects totaling about \$27-million for which federal funds were requested.

**WAIKIKI BEACH TO
BE IMPROVED SOON**

Plans for restoring and improving Waikiki Beach, Honolulu, in a cooperative undertaking by the Territory of Hawaii and the United States Government have been recommended by field offices of the Corps of Engineers.

Proposals of work were submitted by the San Francisco District Engineer and the South Pacific Division Engineer. They will go before the Beach Erosion Board in Washington for review before being finally considered by the Chief of Engineers prior to submission to Congress.

**FEDERAL FUNDS
FOR AIR FORCE**

The Corps of Engineers, U. S. Army recently announced substantial additions to the Air Force facilities at Sacramento and Fairfield will be made.

Details are lacking but it is estimated more than \$34,000,000 will be expended in the project.

**DEFENSE HOUSING
TRAILER PROJECT**

The Public Housing Administration, through the Housing and Home Finance Agency in San Francisco, has announced plans for the construction of a defense housing trailer project at the Beale Air Force Base near Marysville.

The project includes the site for 250 trailers; construction of community maintenance and management buildings and 3 laundry buildings. It will cost \$247,871.

Reynolds & Chamberlin of Oakland are the architects.

**BEVERLY HILLS
INSURANCE AGENCY**

Atlas Insurance Agency have moved into their new 2-story building on the corner of Beverly Drive and Whitworth Drive in Beverly Hills.

The new building was designed by Architect Rowland H. Crawford and provides a combined exterior and interior attractiveness with carefully planned office and working space to produce maximum operating efficiency.

to aid human vision . . .

new tones of real clay *Suntile*
provide interiors that are easy on the eyes

Light Pearl Gray 333

Bright Pearl Gray 733

Suntile LIGHT PEARL GRAY, BRIGHT PEARL GRAY
Versatile colors of wide application

Gray is one of the most acceptable colors in the tile field. These two Suntile grays are new tones developed to meet specific needs of commercial, industrial and institutional interiors. Light Pearl Gray, for instance, has a soft "satiny" tone. It is a neutral shade that will not distract the eye and is helpful where glare should be avoided and eyestrain relieved. Like Suntile Sea Green, Light Sea Green, Marble Tan and Fawn, Light Pearl Gray is most suitable for operations involving critical and severe use of the eyes.

Bright Pearl Gray has a hard, lustrous finish that is virtually scratch-proof. It is best applied where critical seeing tasks need not be performed as in larger, more open wall areas. These two new Suntile colors are part of the Suntile line of functional colors developed by Faber Birren, noted color authority, and The Cambridge Tile Mfg. Co.

Wherever critical seeing tasks are performed authorities say a neutral, non-distracting background is advantageous.

Likewise, it is important to reduce glare and produce a better, more diffuse light reflection.

Proper attention to these factors allows the eye to concentrate with less strain on the involved detail of inspection operations, small parts assembling, laboratory or research work, surgical technique or classroom study.

The new Suntile functional color line includes soft tones and finishes that were developed with the eyes in mind. With them you can design and build interiors that will give better lighting, improve production, and reduce accidents . . . interiors that integrate the room with the task to be performed.

And remember, all Suntile products are real clay tile, thus reducing maintenance and repair to a minimum and making cleanliness easy to achieve with soap and water.

SEND FOR NEW COLOR BOOKLET. To help you select the *right* color for commercial, industrial and institutional interiors we have prepared a new descriptive booklet, "Suntile Functional Color Recommendations." Your Authorized Suntile Dealer will give you a free copy or you may write us direct, Dept AE-9, The Cambridge Tile Mfg. Co., P. O. Box 71, Cincinnati 15, Ohio.

. EDITORIAL NOTES .

YOUNG VOTERS ! ! !

You have taken this country as your birthplace.
You toddled around and laughed and grew under the sunshine skies of Liberty.

Your fathers and mothers put you to bed each night with the confidence of Freedom, not in furtive fear.

You learned in free schools.

You played ball or skated or jumped rope without a care in the world.

Your stomach was full, your clothes were warm, your roof was sound.

You enjoyed the privileges and pleasures, movies and cars, treats and trips like no other youth growing up in the world ever did before.

Now, you are of age.

Now, you are full fledged citizens.

Now, it is your turn to pay with a little of your time and some of your thought for a lot of the things you received when you were growing up.

You can be sure and VOTE at the General Election on November 4th.

You can VOTE to keep your country truly American—so that the children you are raising will have a youth of free years.

Remember . . . each particle of sand HELPS to make a sand pile . . . each vote helps to mold the future of our nation.

You cannot help men permanently by doing for them what they could and should be doing for themselves—Abraham Lincoln.

INDEFENSIBLE ATTACK

President Harry Truman's unprovoked attack on the nation's private power companies is indefensible and basically socialistic.

Truman is threatening private power interests with a Department of Justice investigation claiming they "are following the Soviet and Fascist line, deliberately and in cold blood setting out to poison the minds of the people," through an advertising campaign.

While none of this advertising has appeared in ARCHITECT & ENGINEER, the advertisements do say that power companies are heavy taxpaying institutions and that the government power projects are socialistic. Both of these statements are matters of simple fact.

It is not surprising that the power companies should take the opportunity to tell their message to the public, and to point out that tax free government power development programs are striking at the roots of the American tradition of free enter-

prise. Government sponsored power projects do not hesitate to utilize free use of the mails and great volumes of free publicity to try and convince the public.

In reality who are the private power companies? They are simply you and I and thousands of other citizens who have invested money with capable leadership in an effort to improve the standards of living throughout the nation. History has proven that this leadership can do a pretty good job if not hampered by government interference and competition.

"Economic security cannot be gained by avoiding risk, for there is no security without opportunity, and seldom is there opportunity without hazard":—Benjamin F. Fairless, Pres. US Steel Corp.

BILLIONAIRE'S CLUB

Latest reports show Connecticut, Virginia, and Wisconsin have joined fourteen other states as members of the Billionaire's Club, most exclusive (and expensive) club in America.

Membership in this currently fashionable group is limited to those states which pay the Federal Government a billion dollars, or more, in taxes each year.

Other members include California, Illinois, Indiana, Kentucky, Maryland, Massachusetts, Michigan, Missouri, New Jersey, New York, North Carolina, Ohio, Pennsylvania, and Texas.

Uncle Sam's largest single taxpayer is the state of New York with a payment this year of \$12.2 billion. Federal tax collection for the fiscal year ending June 30th hit a new peak of \$65 billion.

THE UNITED WAY

October is RED FEATHER month . . . the time each year when health and welfare agencies unite in one campaign to raise money for the continuance of their services.

In towns and cities all over the United States and Canada these services for babies and young people, for families, for the ill, the aged and the handicapped are vital to the welfare and happiness of every individual in the community.

Home town needs and national health and welfare programs such as those made necessary by the defense effort are met by your contribution to your united RED FEATHER campaign.

GIVE — The United Way — FOR ALL RED FEATHER SERVICES.

New Sunset District Firehouse, San Francisco: Architect, J. S. Gould, A.I.A.; Structural Engineer, John A. Blume; City Hall Architect, Dodge A. Ried

CLAY BRICK and Architectural Skill Combine to make a Firehouse A THING OF BEAUTY

FRIENDLY neighborhood acceptance is usually a major problem in site selection for a Firehouse. Colorful Clay Brick plus good design gives the structure a handsome appearance . . . that "substantial look" that blends in with nice surroundings—wins friendly acceptance. Neighbors know too

that in years to come Clay Brick will stay that way indefinitely. And taxpayers need no reminding that Clay Brick requires no painting, entails practically no upkeep. Firehouse or schoolhouse, factory or store—whatever you're planning—consider the exceptional qualities of Clay Brick.

NEWS and COMMENT ON ART

ARTISTS INVITED TO SHOW AT ART FESTIVAL

Professional and amateur artists of the San Francisco Bay Area have been invited by Harold Zellerbach, president of the San Francisco Art Commission, to enter their work in the Sixth Annual San Francisco Art Festival scheduled for October 7-12 in the Palace of Fine Arts building in the Marina.

The Festival is open to all painters, sculptors, ceramists, metal-crafters, jewelers, and graphic artists in the nine counties of San Francisco, Alameda, Contra Costa, Marin, Napa, San Mateo, Santa Clara, Sonoma, and Solano. More than 250,000 visitors are expected to attend the Festival.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, under the direction of Water Heil, has scheduled the following exhibitions and events for September:

EXHIBITIONS — Fourth Annual Children's Art

Show; the Art of Toony Duquette, includes Paintings, the Theatre, Decor and Jewelry; Oils, Watercolors, Drawings and Etchings, by Leonard Edmondson; Photographs of Italy, by John Bartolino; and Retrospective Exhibition of Paintings, by Karl Zerbe.

EVENTS include Classes for Art Enjoyment, a study of the changing picture of reality; and the Painting Workshop, for adults. Classes are held on Saturdays, Wednesday and Thursday afternoons.

Children's classes are held each Saturday morning (Picture Making), and Elements of Art, Thursday afternoon; and Form in Art and Nature on Fridays after school.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is offering the following calendar of events for September:

EXHIBITIONS: Contemporary Italian Prints; Nor-

MODERN ONE STORY BUILDING

UNION CARBIDE and CARBON CORP.

Vernon, California

Architects: McCLELLAN, MacDONALD & MARKWITH

A complete modern one-story building in Vernon, a suburb of Los Angeles, has recently been occupied by six divisions of Union Carbide and Carbon Corporation. Sales offices and warehouses, formerly quartered in four locations in the Los Angeles area, are consolidated in the one new location.

It is on a three and one-half acre, fully landscaped plot and occupies 41,560 square feet. The building, constructed of precast reinforced concrete, is faced with stone.

An air conditioned office area is afforded day-

light by a unique patio in the center of the building. Office walls are colorful and floors are covered with asphalt tile. A lunchroom, equipped with range and refrigerating unit, and a paved parking area are available for the use of more than eighty employees.

The warehouse is served by a railroad spur from the Los Angeles Junction Railway. One hundred feet of platform is available for truck shipments.

Construction engineers for the project were Buttriss & McClellan, Inc.

Lobby—polished slate floor

NEW CONTAINER FACTORY AMERICAN CAN COMPANY

WILMINGTON, CALIFORNIA

DONALD R. WARREN CO.—Architects & Structural Engineers

LINDGREN & SWINERTON CO.—General Contractors

The rapid growth of Southern California's vast food packing industry, and promise of an even greater future, was recently dramatized in special ceremonies when the American Can Company's new multi-million-dollar can manufacturing plant constructed in the Wilmington Harbor area of Los Angeles, was thrown open for public inspection during a "Family Night" and open house celebration dedicated to the service of the canning industry.

More than five thousand Southern Californians and company employees, led by T. E. Alwyn of

New York City, vice-president in charge of sales; C. W. Roberts of San Francisco, vice-president in charge of the Pacific Division of the American Can Company; R. K. Frederick, manager of the new Wilmington plant, and a distinguished group of governmental, business, and civic leaders, inspected the new factory building and grounds and watched actual demonstrations and production of high-speed assembly manufacturing lines produce round and oval cans for the great fish packing industry of the Pacific Coast which centers in the Southern California area.

. . . NEW AMERICAN CAN PLANTS

Under construction for more than a full year the new factory is a product of the Donald R. Warren Company, Architects and Structural Engineers, Los Angeles office who designed the building, and represents one of the most modern can manufacturing plants in the world. Actual construction work was done by Lindgren & Swinerton Company of Los Angeles, General Contractors. It is the eighth American Can Company plant to be built in California and according to engineers has a rated production capacity of some 350,000,000 containers a year, or more than two cans for every man, woman and child in the United States.

There are 259,000 square feet of floor space in the building. General business offices are located at the front, a machine shop has been installed on the left center for maintenance convenience and economy of manufacturing operation. Storage space and shipping facilities have been located in the rear of the structure for quick handling of products; and the large area in the right center has been set aside for machinery and equipment used in actual manufacturing of cans.

Included in the business office area is a fully equipped and staffed medical department for use of employees needing emergency treatment or periodic physical examination. A modern equipped cafeteria has been provided for daily use and is also designed so that it may be used for gen-

eral employee meetings and a certain amount of recreational activities. Other extensive facilities for employee comfort, welfare, and safety have been provided, as has a large parking lot in an adjacent area which is a great convenience to workers in solving transportation and parking problems.

Fluorescent tube lighting is provided in the cafeteria and over the manufacturing machinery throughout the plant. Other areas have indirect lighting and a great amount of natural daylighting due to the large windows of the building. As an extra precautionary measure to minimize plant accidents, safety guards have been placed around all moving parts of machinery.

Design of the building provides for a maximum of open-space areas in the manufacturing portion, with a minimum of floor space being devoted to columns and roof supports. The rear storage facilities provide ample room for handling of completed products awaiting shipment to users, and the shipping department is served by a twenty-one car railroad siding and loading platform, and as a convenience to rapid delivery service frequently desired by a customer, a ten truck loading dock has been provided.

The ultra-modern one story Ranch type structure is constructed of reinforced concrete, steel, and decorative brick, with a large "fin" rising over the

FACTORY INTERIOR provides spaciousness and light

NEW AMERICAN CAN PLANTS . . .

MAKING LITTLE ONES OUT OF BIG ONES—Modern slitter machine cuts large sheets of tinplate into "body-blanks" of exact size of the tin cans to be made.

GIANT TESTING WHEELS—Give newly made cans a quick but thorough test. As containers move down runway they are automatically tested by compressed air making sure each unit is satisfactory.

. . . NEW AMERICAN CAN PLANTS

pany of San Francisco, General Contractors, this plant has an annual rated capacity of 350,000,000 fruit and vegetable cans, and represents an important addition to the vital food-packing industry of the Sacramento valley, San Joaquin valley and Delta agricultural districts where some 41,670 farms containing more than 12,170,000 acres are located.

In button-pushing ceremonies that started can production lines officially rolling, State Senator Verne W. Hoffman, recently described the plant as "an important addition to the vital food packing industry" and predicted a "bright future" for the entire region. Herbert L. Lundstrom, manager of the new factory, described some of the techniques of can making and some of the problems faced by the architects and engineers who designed the building.

It is the ninth American Can Company plant in California and brings the company's post-war modernization and expansion program in this country, Canada and Hawaii to more than \$184,000,000.

The building itself is very similar in design to the Wilmington plant. Constructed of steel, reinforced concrete and decorative brick, the general

appearance is that of a one-story Ranch style structure. Wide over-hanging eaves protect large windows from unnecessary sun-glare and also serve as entrance protection during rainy and stormy weather. Decorative brick forms an interesting exterior base-line, and towering high above the building is a huge "fin" which serves as the base for decorative neon lighting and large letters denoting the firm's name.

Some 296,000 square feet of floor space is incorporated in the building and provides for a battery of high-speed, automatic, can making machines, each of which is capable of turning out up to 450 cans per minute. Spacing is arranged so that the tin plate flows continuously from one operation to the next. Tin plate that enters one area, is processed with maximum efficiency until it is finally stored, or shipped, in the form of finished cans. Exposed moving parts of machinery have been screened by mechanical guards and fluorescent lighting placed over each machine.

The streamlined brick and steel factory is situated on a 39 acre site at Highway 50 and South California Street and its business offices and plant are strategically located to serve the canneries of the area.

SPARKLING NEW CANS roll down conveyors at modern Stockton plant.

NEW AMERICAN CAN PLANTS . . .

FULLY EQUIPPED MEDICAL DEPARTMENT—provides for physical examinations and treatment of illness or injury.

SPACIOUS CAFETERIA—is being used here for festivities in conjunction with opening ceremonies of the new plant . . . seats 250 for cafeteria use.

(See lower photo)

In addition to the most modern can production facilities in the world, extensive facilities for employee comfort, welfare and safety have been provided including a cafeteria designed to seat 250 people and which may also be used for company-employee events if desired; special locker rooms for men and women; a fully-equipped and staffed medical department that not only serves for accident-emergency, but also provides ample

utility use in conjunction with a company hospitalization plan for employees and dependents; and a spacious parking area.

The shipping facilities include a truck-port and dock capable of handling twenty-six freight cars on three railroad tracks served by two major transcontinental railroads, and eleven trucks, all at the same time.

MODULAR COORDINATION

A Program For Lower Building Costs

An evaluation of the Modular Method, as a feature of the Third National Standardization Conference in Chicago and part of the American Standards Association program in conjunction with the Centennial of Engineering currently being celebrated by the American Society of Civil Engineers, by a panel of experts representing five different branches of the building industry as to its real effectiveness in raising building efficiency was most helpful to those who are encouraging the conversion of the nation's construction industry to this system, according to William Demarest, Jr., secretary for Modular Coordination at The American Institute of Architects in Washington, D. C.

Colonel Willard T. Chevalier, executive vice-president of the McGraw-Hill Publishing Company, acted as moderator of a session devoted to a discussion of the Modular Method as an approach to cost reduction in the building industry, to which the public was invited. The meeting was held in the International Harvester Theater of Chicago's Museum of Science and Industry on September 8th, and was sponsored jointly by The American Institute of Architects, The Producers' Council, and the National Association of Home Builders.

Sufficient experience with the system has already been accumulated, according to the sponsors, to answer such questions as: How Well Does the Modular Method Really Work Out in Practice?, What Possibilities for Better Building Does It Present for the Future?, etc. The panel reporting on these questions included: William H. Scheick, A.I.A., Executive Director of the National Research Council's Building Research Advisory Board, representing building research; architect Gannett Herwig, A.I.A., of Alfred Hopkins and Associates, New York; manufacturer F. M. Hauserman, President of the Hauserman metal partitions company, Cleveland; builder Arthur Bohnen of Chicago's J. L. Simmons Company; and Professor William S. Kinne Jr., A.I.A., of the University of Illinois Architecture Department.

The Modular Method is a simple system of coordinating the designer's dimensions for a building with the actual unit sizes of the materials with which it is to be constructed. A major feature is that it facilitates more thorough pre-planning of a structure by the designer, giving greater construction efficiency on the site. Mr. Demarest's Modular Coordination Office serves as a center of information regarding the Modular Method.

ALASKA DISTRICT CONSTRUCTION

By GIL PEARSON

Technical Information Officer
Anchorage, Alaska

The state of affairs of the defense construction program in Alaska was brought into focus recently by the supervising agency, the Corps of Engineers. In revealing facts and figures for the benefit of businessmen, contractors, and labor, the Alaska District Engineer seeks to establish a common knowledge of the status of the tremendous building program here.

Interviewed at his Anchorage headquarters, Colonel Louis H. Foote was asked questions designed to clear up various erroneous impressions concerning the amount of work now going on. He made detailed replies to the queries of how much of last year's program remains to be accomplished, and what new work can labor and management look forward to.

Of the fiscal 1952 program, the engineer said that fifty-two per cent of the army's projects and seventy-six per cent of the air force's projects have yet to be put under contract. These and other contracts not yet awarded from earlier programs total \$100 millions. All are being scheduled on an orderly basis for bid openings on an equal competitive basis to any contractor. This means vast immediate and future opportunities for labor and contractors for the projects are diversified in size, type, and location.

Of the fiscal 1953 program, it was pointed out that there are programmed one hundred and twelve projects valued at \$132 millions. This construction, like the 1952 program, is spread throughout Alaska with principal quantities at Fairbanks and Anchorage. Again, the work is being scheduled for an orderly call for bids consistent with good management, the interests of the federal government in economy, and the progress of labor-management wage negotiations. It is planned to have all 1953 projects up for bids by next April to be offered from month to month from now through the winter.

It is obvious that the tremendous work schedule underway provides a stimulating challenge to all

BARRETT & HILP
General Contractors

*Photo by
Philip Fern*

ARCHITECT AND ENGINEER

TIMBER SPAN INSTALLATION

View shows how giant timber spans were used as roof support to provide a maximum of open floor-space area.

Constructed at a cost of more than \$2,000,000 the new, modern type, warehouse of the General Warehouse Company of San Francisco, was recently dedicated at public ceremonies in which civic, business, and governmental leaders participated.

The rather unusual type of structure was designed by the San Francisco architectural firm of Ward & Bolles to meet the specific needs of a large general warehouse where quantities of materials

could be received from a wide variety of sources, conveniently stored, and easily and quickly re-shipped by truck, automobile, rail, and steamship to a number of Federal governmental agencies.

While constructed by Barrett & Hilp, General Contractors of San Francisco, for the General Warehouse Company, the actual occupant of the structure is the U. S. General Services Administration under terms of a "lease-use", therefore facilities had to be provided for handling vast quanti-

AIR VIEW of site location and one stage of construction

ADMINISTRATION WAREHOUSE . . .

ties of a wide variety of items.

General Service Administration officials estimate that more than three quarters of a million dollars worth of U. S. government commodities, including such items as office furniture, food, hardware and fire fighting equipment, will be distributed monthly from the warehouse. This will include servicing more than 321 different ordering offices of Federal agencies in California, Nevada, Arizona, Hawaii, Guam, and Samoa. Similar types of structures are now being built in Seattle, Washington, and Washington, D. C. to serve other areas, and thereby reduce the pressure of such central spots as the South San Francisco warehouse.

The site of the structure is a large area at 1070 South Mateo Avenue in South San Francisco which lies between the Bayshore Highway and El Camino Real, Routes 101. It is adjacent to a well developed residential district, and yet is served by railroad spur trackage and paved boulevard.

The warehouse itself is of a Type "C" construction with an over-all reinforced concrete floor built at car level. The general design comprises an outer appearance of eight major units, all of which appear to be joined together and laid-out in a spread "U"-shape. There has been a complete fusion of connection between the overhead "unit" appearance, however, so the interior of the warehouse presents an unobstructed, wide expanse,

of open floor space with a bare minimum of pillars, or supporting columns, necessary to support the roof.

The reinforced concrete walls, which contain large and frequent doorways but no windows, are of the new method "Tilt-up" type construction, wherein the walls, instead of being formed and the concrete poured in the conventional vertical position in place, are formed and the concrete is poured in a horizontal position. The individual sections are then "tilted" into permanent position by heavy lifting construction equipment.

Laminated wood trusses were used almost exclusively throughout. This was done to minimize the use of steel for girders, and roof supports, because of the acute shortage of structural steel and government limitations on use of steel. As a result the wide-arch design of the roof support offers a minimum in floor column obstruction and a maximum utility use of the warehouse area is available.

The large concrete floor, which was poured as one of the initial construction stages, is laid out in squares and covers the entire building area. The flooring also serves as a solid base for the "Tilt-up" walls.

Practical facilities for receiving goods from manufacturers and distributors, and then dispersing to Federal consuming agencies, includes railway loading platforms and a truck and motor vehicle dock.

PRE-CAST tilt-up concrete walls are set on solid base

Artist's sketch of West Coast Fast Freight Terminal building

MODEL OF EFFICIENCY

MODERN FREIGHT TERMINAL

Portland, Oregon

By **ARTHUR W. PRIAULX**

RAYMOND G. CLIFFORD—Architect

BICKFORD CONSTRUCTION CO.—General Contractors

Completed early last year, the million-dollar motor freight terminal of the West Coast Fast Freight, Inc., constructed in Portland's Guild Lake industrial area, it represents one of the longest buildings constructed in this hustling, growing city in recent years.

Made up of three consecutive units, the structure is 569 feet long and varies in width from 95 feet to 154 feet. The building is believed to have the longest continuous run of clerestory dormer win-

dow bays of any building in the Northwest. The bays cover both sides of the single-story part of the building for 504 feet, or 1008 feet of windows.

Architect Raymond G. Clifford of Portland had the problem of combining all known features developed during the past twenty years in other motor freight terminals to get maximum efficiency and freight handling capacity in the available area.

The terminal is composed of three distinct units.

MODERN FREIGHT TERMINAL . . .

UNIQUE BOW-STRING TRUSSES

Being lifted into position, cover 504-foot-long freight sheds and garage portion of terminal.

Frame to carry roof and clerestory window bays has been built into truss.

TRUSSES set on cement piers. Terminal has one of the longest buildings ever to be constructed in the Portland industrial district — 569 feet.

. . . MODERN FREIGHT TERMINAL

A three-story office and security storage building was constructed within the reinforced concrete shell of what was once an incinerator. Adjoining the office section is the cleverly designed transfer dock which is 60 by 312 feet with a twelve-foot over-hang roof on each side of the double opening freight handling dock. The third unit is a repair and maintenance garage 154 feet by 192 feet in size which is a continuation of the transfer dock building.

The freight transfer dock is a model of compactness. It accommodates 52 trucks and trailers at one time and is designed to handle three million pounds of freight daily. Long-distance trucks operate from one long side of the dock and local-haul trucks work from the opposite side.

Architect Clifford kept the design features of the transfer dock relatively simple. Actually this phase of the structure is a long series of identical sections built on a 24-foot module. The 84-foot roof section, which contains the clerestory dormer win-

dows, is supported by a bowstring type truss. A novelty of this truss is an added strut above the top chord which supports the roof framing and shelter for the clerestory sash. The struts are an extension of the bracing in the truss and are actually a part of the truss, being built into the framing. The roof is frame with built up asphalt covering.

The roof over the garage is identical with the truss construction for the dock area, excepting that an additional 35-foot section has been added to each side to serve as equipment stalls on both sides of the main body of the garage. The garage proper has a clear span of 84 feet without a post or obstruction. The garage floor, as well as the raised dock is concrete slab.

The Portland terminal is part of a five-year, \$4,000,000 expansion program now underway on the Pacific Coast by the West Coast motor carrier. Cities due for new terminals are Salem and Medford, Oregon; Pasco, Ellensburg and Omak, Wash-

END VIEW of 84-foot truss built with patented ring connectors

MODERN FREIGHT TERMINAL . . .

ington; Missoula, Montana; Sacramento, Stockton and Fresno, California. A \$500,000 depot has also been built at Spokane.

The bowstring trusses are set throughout the 504 feet of the single-story section of the structure at 24-foot intervals. They rest on concrete posts. Approximately a million feet of lumber was used in the trusses, roof sections, window framing and sash and in trim throughout the building. This structure rates well up at the head of the list of buildings erected in recent years for the volume of wood it contains.

One of the problems confronting Architect Clifford was how to get maximum salvage value from the old incinerator building. Center of the structure was taken up with three stories of pipes and machinery, which had to be removed. He has come up with a highly functional office layout in

the old concrete shell. The first floor contains general offices for both the West Coast Fast Freight, Inc. northwest offices, in addition to similar accommodations for the System Tank Lines, a subsidiary of West Coast. Second floor was given over to accounting and third floor to security storage. Floors are of concrete covered with asphalt tile. Lighting throughout the building is by direct-indirect incandescent fixtures. Heating by hot water.

The principal problem in design of the main building was to get as much of the working area under shelter as possible without waste. All of the dock area where freight is handled is covered and well lighted. All freight handling and loading is under roof. The twelve-foot overhang takes care of that.

The garage handles general repairs for the entire system, and is one of the most modernly

MORE than one million feet of lumber was used in the building of this terminal. Illustration shows details of raised struts which carry clere-story window bays.

equipped on the Coast, capable of handling any work needed on the big on-highway transport jobs. Trucks and trailers can be spotted in their own individual stall while undergoing repair, and thus kept clear of the central section of the garage.

General construction work was done by Bickford Construction Company of Portland.

Twenty-six huge highway trucks and trailers can be handled simultaneously on each side of the long dock section. Spacing is such between trucks that freight handlers on the dock can work each truck independently with a minimum of confusion.

The freight terminal has been located in the center of an extensive land area to allow easy access of trucks to and from the structure. A very

large apron for truck storage and movement has been built on either side of the building.

This is one of the most modern motor freight terminals in the West, officials of the trucking company have stated. It combines simplicity with functional arrangement. Even though of an unusual size, Architect Clifford was able to design attractive lines and distinction into a building that could easily become just a long pile of lumber.

Cost of this structure was kept down by the manner in which the building has been designed in a series of identical sections. Even though of extraordinary length and size, the structure is actually only a series of 24-foot buildings placed end after end, and all exactly alike.

ANOTHER TYPE of wooden struss which carries posts for clere-story frame are the bow-strings shown here and which are manufactured in Portland. (This photo courtesy Timber Structures. All other photographs by Maurice Hodge.)

ARCHITECTS CONTRIBUTE TO BETTER LIVING

Better peacetime living as well as security against the threat of atomic attack was promised by the American Institute of Architects in a program recommended at the organization's 84th annual convention held recently in New York City, reports Charles O. Matcham, Los Angeles architect and Regional Director of the Sierra-Nevada District of the Institute.

A resolution adopted by the membership called for emphasis on decentralization and dispersal of

cities and industries, and a replanning of the central areas of existing cities to relieve congestion and provide better conditions for work and living.

The architects advocated strengthening the federal highway program to include urban parkways for relief of urban congestion, to provide park and playground strips, and to

CHARLES O. MATCHAM
A.I.A. Director

provide firebreaks and free circulation for national defense.

The stimulating effect upon construction demand of the nation's population growth was also emphasized. In 1947, for the first time since 1915, the nation's birth rate was over 25 per thousand of population. There had been a marked downward trend in the birth rate from 1915 through 1933, then a moderate increase leading to the spectacular jump in 1947. Since 1947 the rate dropped off somewhat, but was again over 25 per thousand in 1951. "It looks as if postwar parents are going in for larger families. Postwar babies are making their weight count in the American economy," Matcham quoted in summarizing convention reports.

The immediate building program for wartime and postwar babies is a school building program which has already reached boom proportions and promises to continue at a high level for some time. Space and materials conservation in the design of schools received special emphasis at the meeting. Substitution of wood frames, reinforced masonry and other materials for structural steel in architect's new designs has aided the conservation effort.

An example of space conservation practices is offered by the work of California architects where many schools are required by law to meet certain space requirements. The architects have designed classrooms, art and science rooms, administrative rooms and gyms to provide multi-purpose facilities. Time and energy of the school staff are conserved by providing rooms with a minimum of stationary equipment and cabinets, while operating costs are reduced by the use of low-maintenance-cost materials rather than low-first-cost materials. It is important that conservation be approached both from the point of view of initial construction cost and the efficiency of future operation. Extreme operation waste can result from extreme conservation of space and materials in construction, the architects were reminded.

The American people today are also demanding and getting higher quality housing than ever before. For more than a decade they have enjoyed improved diets, better clothing, better shelter and increased numbers of household conveniences and other goods and services. Living standards in the United States are at an all-time peak.

The potentials for further growth and expansion of our economy are such that we may quite possibly have ahead a greater prosperity, with larger annual volumes of construction, than anything the nation has yet experienced, Matcham concluded.

JOINT INFORMATION COMMITTEE

AMERICAN INSTITUTE OF ARCHITECTS and THE PRODUCERS COUNCIL, INC.

With this sentence, "The Boards Has Authorized the Department of Education and Research to provide a specification card file reference service, in collaboration with the Construction Specifications Institute," the 84th convention of the A.I.A. in New York City June 23-27, 1952 put in effect the A.I.A. Specification Service that was initiated on the Pacific Coast by members of the Joint Information Committee in San Francisco. This culminates the concerted efforts of the ARCHITECT AND ENGINEER MAGAZINE and many other individuals than those we have mentioned in past articles successfully.

We cannot give full credit to all who contributed to this idea, but we would like to mention the highlights of those who were continuously helpful in attaining this SPECIFICATION SERVICE. Initially Don W. Lyon then with the San Francisco division of Libby-Owens-Ford Glass Company spotlighted the idea in a speech he made at the Producers Council Table Top exhibit in the spring of 1950. Then R. P. Moffett, Perry-Edwards Co., called our attention to the plan for a specification system proposed by F. Bourn Hayne, A.I.A. From this point many various people took part in presenting this idea as ably outlined by Hayne through all the phases needed to bring it to national attention. Wendall Spackman, A.I.A., Frank V. Mayo, A.I.A. past-president of the Northern California Chapter of the A.I.A., Francis J. McCarthy, A.I.A. past-president of the Northern California Chapter of the A.I.A., George E. Conley, Johns-Manville, past-president of the San Francisco Producers' Council to name only a few. For a year the idea formed and called Uniform Specification Procedures progressed through local and national chapters to attain recognition.

It is now almost an established fact as reported in the Boards Report of the annual A.I.A. convention. The text of the A.I.A. SPECIFICATION SERVICE report follows: "The Board has Authorized the Department of Education and Research to provide a specification card file reference service, in collaboration with the CONSTRUCTION SPECIFICATIONS INSTITUTE.

"The 8½" x 11" cards will be indexed according to the A.I.A. Standard Filing System. The content will consist entirely of edited specification data and wording, not advertising or product literature. This material will be edited and coordinated by a professional specification writer added to The Octagon staff, working under the general oversight of the Executive Director and the Department of Education and Research, and an advisory committee of members of the A.I.A. and the Construction Specification Institute.

"As now planned, the first issuance, after a year of work, would comprise approximately 200 general specification cards and, approximately 100 manufacturers, and 50 trade association cards.

"Trade associations and individual manufacturers will pay adequate fees for the inclusion of their material. The Institute membership and others in the profession will receive a descriptive folder with specimen cards and will be invited to subscribe an advance of \$10 for the original set and \$5 per year for subsequent years' services of additional and revised cards. Advance subscription by 1500 to 2000 architects will be necessary for the inauguration of the Specification Service."

Final establishment of the service and installation of the system for the Architects use will be the accomplishment of a major portion of the idea for Uniform Specification Procedures which will assist the Architect in writing the specification as needed and remove the charges which are constantly made to the effect that his 'Specs' are antiquated, even calling for material no longer in manufacture, etc., etc. The manufacturer will have to meet a new challenge from the Architectural profession and must measure his product installations with these specifications which will be largely of his own design. The ARCHITECT AND ENGINEER MAGAZINE is very gratified in the result of its editorial support to this idea. Particularly do we feel a sense of accomplishment since we were the only architectural publication lending this important plan our whole hearted support.

NOTE: This news space is being contributed by ARCHITECT & ENGINEER Magazine to the JOINT INFORMATION COMMITTEE representing the Northern California Chapter of The American Institute of Architects and the Northern California Chapter of the Producer's Council, Inc., and is available to this Committee for the purpose of bringing to the attention of leaders within the Construction Industry various phases of the Architectural profession and building materials industry procedures for general consideration and comment. Your "ideas" and any suggestions for the better pooling of thoughts along these lines should be sent to "Joint Information Committee, c/o The Architect & Engineer, 68 Post Street, San Francisco," where they will be immediately forwarded to proper committee members.

NORTHWEST REGIONAL MEETING SCHEDULED

The Northwest Regional Meeting of architects has been scheduled for October 3-4 in the Davenport Hotel, Spokane, Washington.

The two day conference will include a Seminar on Regional Planning at which Roy F. Bessey, Portland, chairman of the Pacific Northwest Field

Committee, U. S. Department of the Interior, will talk. Also included in the Seminar will be a talk by Paul Hayden Kirk of the Washington State Chapter, A.I.A., on the subject "Farm in a Day."

Francis Joseph McCarthy, Architect of San Francisco, and member of the A.I.A. Committee on Public Relations, will speak at a Seminar on Public Relations.

PASADENA ARCHITECT WINS TOP AWARD IN HOME CONTEST

William L. Rudolph, of Pasadena, won top award of \$2,250 in a national architectural products, small homes architectural competition, which was sponsored by architectural publications and group of cosponsors.

More than 250 entries were considered by the Jury panel comprising Arthur E. Mann, Whitney R. Smith, Raphael Soriano, A. Quincy Jones, Walter R. Hagedohm, and Arthur B. Gallion, dean of the College of Architecture, University of Southern California.

Rudolph is a member of the firm of Byles, Western & Rudolph, Pasadena.

CALIFORNIA COUNCIL OF ARCHITECTS

A.I.A. President Glenn Stanton of Portland, Oregon, will be one of the principal speakers at the 1952 Annual Convention of the California Council of Architects and Sierra-Nevada Regional Conference in Yosemite Park, October 9, 10 and 11.

The Council has given its endorsement to Proposition No. 2 on the November Ballot. The proposed measure would raise the State support of schools from \$120 to \$180 per pupil (ADA) per year, and basic aid from \$90 to \$120 per year. It is designed

also to meet the problem of higher school costs and to balance the load between State and local taxpayers.

Secretary Fred Chase represented A.I.A. architects at the recent special session of the State Legislature, explaining to many legislators and allied interests the position of the individual architect in relation to school work.

SOUTHERN CALIFORNIA CHAPTER

James Mussatti, general manager of the California State Chamber of Commerce, spoke at the August meeting on the subject of "Our American Heritage." Prior to assuming the duties of general manager for the Chamber of Commerce, Mussatti was executive secretary of the California Taxpayers Association and an Instructor in American History at the University of Southern California.

Appearing on the same program was Samuel Leask, Jr., City Administrator of Los Angeles. His subject was "Office of City Administrator." Leask was formerly a member of the California Unemployment Reserves' Commission; a member of the Advisory Council U. S. Employment Service; and Southern California Director for the Office of Price Administration.

WASHINGTON STATE CHAPTER

The first meeting, following the summer vacation, was held in the Sorrento Hotel, Seattle, on September 4th, with a number of committee reports and Executive Board reports.

The Ways & Means Committee, under chairman Lawrence G. Waldron, and the Program commit-

tee under the chairmanship of Talbot Wegg, outline extensive activities for the ensuing months.

John D. Spaeth, Jr., Director of Planning, spoke on the Off Street Parking Ordinance which has been proposed for adoption in Seattle.

WITH THE ENGINEERS

Structural Engineers Association of California

Donald F. Shugart, President; Walter A. Buehler, Vice-President; Lewis K. Osborn, Sec.-Treas.; Office c/o Kistner, Curtis & Wright, Room 203 Architects Bldg., Los Angeles. Directors Arthur W. Anderson, John E. Rinne, Henry J. Degenkolb, Lewis K. Osborn, Ernest C. Hillman, Jr., R. W. Binder, Donald F. Shugart, Walter A. Buehler, and G. E. Goodall.

Structural Engineers Association of Northern California

John J. Gould, President; G. A. Sedgwick, Vice-President; Art B. Smith, Jr., Secretary; Franklin P. Ulrich, Treasurer; Robert P. Moffett, Ass't. Sec.; Wm. K. Cloud, Ass't. Treas.; Directors Robert P. Dalton, John J. Gould, Leslie W. Graham, J. Albert Paquette, John E.

Rinne, Hyman Rosenthal, and G. A. Sedgwick. Sec. Office, 417 Market St., San Francisco.

Structural Engineers Association of Central California

William H. Peterson, President; Walter S. Wassum, Vice-President; O. T. Illerich, Sec.-Treas.; Ernest D. Francis, M. A. Ewing, and Arthur A. Sauer, directors. Office O. T. Illerich, c/o Div. of Arch., Sacramento.

American Society of C. E. San Francisco Section

Clement T. Wiskocil, President; John S. Longwell, Vice-president; J. G. Wright, Vice-president; H. C. Medbery, Treasurer; R. D. Dewell, Secretary. Secretary's Office, 604 Mission St., San Francisco.

STRUCTURAL ENGINEERS ASSOCIATION OF NORTHERN CALIFORNIA

The subject "Earthquake at Tehachapi" was highlighted at the September meeting with discussions by Karl V. Steinbrugge of the Pacific Fire Rating Bureau; Henry J. Degenkolb with John J. Gould, Consulting Engineer; Steve Barnes, Structural Engineer of Los Angeles; and William K. Cloud of the U. S. Coast & Geodetic Survey.

A great deal of information has been gathered relative to the recent earthquakes in the lower San Joaquin Valley and Southern California, and it was pointed out that building codes and future

structures will be benefited by current engineering studies being made.

W. K. Cloud has been appointed Treasurer, succeeding the late Franklin P. Ulrich who served in that capacity for 13 years.

The October meeting will be held in Berkeley with C. Earl Webb, Chief Engineer of The American Bridge Company speaking on "Trends in Structural Engineering." University of California engineering students will be invited to attend.

ENGINEERS MAKING STUDY OF LOS ANGELES SHAKES

The Seismology Committee of the Structural Engineers Association of Southern California is making an extensive survey and study of the effects of the recent earthquakes in southern California on existing structures.

Committee Chairman R. W. Binder, 348 N. Ridge-wood Pl., Los Angeles, is urging all engineers to send in information available on building vibration and effect on structure in general.

Results of the Committee study will be compiled and made available for future use.

AMERICAN SOCIETY OF CIVIL ENGINEERS

The San Francisco Section of the American Society of Civil Engineers recently heard Ray W. Carlson, Consulting Engineer of Berkeley, discuss the subject of "Atomic Bomb Tests and Structure Instrumentation."

Carlson worked on development of the A-Bomb at Los Alamos, New Mexico, during World War II, and since that time has devoted much time to both the testing of structures subjected to A-bomb blast and the development and perfection of devices for the direct measurement of stresses.

Spier, Treasurer; and Rear Admiral C. A. Trexel, CEC, USN (Ret.), Capt. Cushing Phillips, CEC, USN; Capt. H. F. Ramsford, CEC, USN; Clyde Bentley; Lt. Col. James D. Strong, CE, USA; and J. G. Wright directors.

October 16-17-18, reports a large number of advance reservations have been received, and urged those planning on attending the Convention to send their reservations in at once.

President Donald F. Shugart has announced a number of outstanding national speakers have been scheduled for the Convention and that the subjects under discussion will be of extreme importance to the Engineering profession. Complete details will soon be announced.

**STRUCTURAL ENGINEERS ASSOCIATION
OF SOUTHERN CALIFORNIA**

The September meeting was devoted to a discussion of "The Arvin Earthquake" with a panel of six speakers relating their personal observations of the effects of the recent earthquakes.

Those taking part in the discussions included G. W. Housner, P. E. Jeffers, D. F. Moran, E. C. Hillman, Jr., D. F. Shugart, S. B. Barnes and Murray Erick.

R. W. Binder, Chairman of the Seismology Committee served as moderator and subjects discussed included Instrument Analysis, Tunnels and Farm Lands, Elevated Water Tanks, Bakersfield and Arvin, Santa Barbara, Statler Hotel (Los Angeles), and the Prudential and General Petroleum buildings in Los Angeles.

New members include Pecos Calahan, Associate; and Louis Molnar, member.

**AWARDED RECOGNITION BY
PROFESSIONAL ENGINEERS**

Dr. David B. Steinman of New York City, builder of bridges on five continents, has received the second award ever given by the National Society of Professional Engineers for distinguished service to the engineering profession.

The first award was made to Herbert Hoover in 1949.

Dr. Steinman's first fee as a consulting engineer was \$5.00, yet within six months he had been hired

to build the Florianapolis Bridge in Brazil, the largest bridge in South America. Other famous bridges he has built include the Henry Hudson Bridge, the St. John's Bridge in Portland, Oregon, the Thousand Islands Bridge, the Sky Ride at the Chicago World's Fair, the renovation of the Brooklyn Bridge, the Mount Hope Bridge in Providence, R. I., and hundreds of others. He has been retained to construct the Straits of Messina Bridge between Sicily and the mainland of Italy.

FEMINEERS

The regular August meeting of the "Femineers" was held in the Elks Club of San Francisco and

INFORMATIONAL MEETINGS

On August 4, The Armstrong Cork Company presented an informational program entitled "How to Select an Acoustical Material."

It was pointed out to us that the co-efficient of efficiency assigned to the various acoustical materials on the market today is not the only basis of selection for the application of these materials. These co-efficients are not intended to indicate that one material is better suited than another for a particular job for the co-efficient is actually the average of the material's ability to absorb the entire range of sounds in the audible frequencies.

We were advised that the selection of an acoustical material should be based upon the material's ability to provide acoustical correction for a definite sound range and that the initial cost of the material and installation should be given consideration along with the material's appearance, fire resistance, light deflection, maintenance, and moisture resistance.

At our regular monthly information meeting on October 6 at the Palace Hotel in San Francisco, a co-sponsored program entitled "Daylight in School Design" will be presented by the Detroit Steel Products Company and Libbey-Owens-Ford Glass Company.

These two companies have, for several years, been sponsoring an intensive research study on classroom daylighting at Southern Methodist University, Dallas, Texas.

The results of these studies and intensive research will be presented by R. L. Bieseke, Jr., formerly Research Professor of Engineering at S.M.U. The speaker, who has also made extensive field studies throughout the United States and a special study of California school design, is nationally known for the lucid and highly illustrated character of his presentations.

Bieseke is a National Director of the Illuminating

Engineering Society, a member of its committee on School Lighting and Daylighting and is Chairman of the latter committee. He is also a member of the National Society of Professional Engineers, the American Institute of Electrical Engineers, and the U. S. National Committee of the Commission International d'Eclairage. He is a Registered Professional Engineer and has served as a consultant to numerous school systems and architects.

Architects who are interested in attending this luncheon meeting should phone Douglas 2-0890, or Sutter 1-4360.

SPORTSMAN'S PROGRAM AND SPORTSMAN'S DINNER AT YOSEMITE

The two chapters of the Producer's Council are again sponsoring the coordinated sporting events between the Architects and Producers at the Architect's Annual Convention at Yosemite. The members of the Producer's Council, with the assistance of Al Thomas, Architect of Sacramento, will be in charge of the individual contests. The Producers selected to handle the various activities are as follows:

Tennis—Paul Wagner, Armstrong Cork Company
Baseball—Harris Wilkinson, Pittsburgh Plate Glass Company

Pitch & Putt—Hillman Hudson, Vermont Marble Company

Ping Pong—Phil Mittel, Otis Elevator Company
Golf—Bob Dumesnil, The Brookman Company, Inc.
Horse Shoes—Lloyd Cramer, Westinghouse Electric Corp.

Croquet—Phil Brown, Otis Elevator Company
Cards—(Bridge and Canasta), Betty June Cowley

The annual sportsman's dinner featuring the awards to the winners of the sporting contests will highlight the close of the convention and will be sponsored by the two California Chapters of the Producers' Council.

AMERICAN SOCIETY OF MILITARY ENGINEERS—SAN FRANCISCO POST

Colonel Fremont S. Tandy, E. Engineer III Corps, Ft. MacArthur, California, was the principal speaker at the September meeting held in the Presidio Officers' Club, San Francisco.

Col. Tandy spoke on "Engineering Operations In Korea" and gave a very interesting and informative description of Army activities in Korea. He activated and trained the 32nd Engineer Construction Group at Camp Carson, Colorado, and took it to Korea in 1951 where he served as its Commander.

A number of photographs were shown in conjunction with Col. Tandy's comments.

AMERICAN SOCIETY FOR TESTING MATERIALS

The American Society For Testing Materials has scheduled two important conferences for the Pacific Coast during November, according to an announcement from Society headquarters in Philadelphia, Pa.

The first meeting will be held during the week of November 17th in Los Angeles and will be sponsored by the Southern California District ASTM; the second conference, sponsored by the Northern California District ASTM, will be held during the week of November 25th in San Francisco.

ASTM officials urge all persons interested in the work of the Society to attend either or both of these West Coast conferences.

NEWS & COMMENT ON ART

(From Page 6)

wegian Print Makers; American Vanguard for Paris, an American Federation of Arts Exhibition; Rental Gallery; 16th Annual Watercolor Exhibition of the San Francisco Art Association; Standards of Illustration in Children's Books; and Drawings of Korea by Roger Stringham.

EVENTS will include Sunday Lectures at 3 o'clock—Approaches to Creative Painting—Ferren and Franck, by Barbara Fitzwilliams; Contrast and

Comparison in European Prints, by Anneliese Hoyer; The New Look in Watercolors, by Lare Oppenheimer; and What Do Children Like in Illustration, by Anneliese Hoyer.

The Wednesday evening 8 o'clock lectures will include Gropius Designs for Living, by Lare Oppenheimer; Trends in Watercolor Paintings, by Barbara Fitzwilliams; Freedom of Expression in Watercolor Painting, by Barbara Fitzwilliams; and American Vanguard—Imagination and Experiment, by Lare Oppenheimer.

A Tour has been arranged by the Women's Board of the Museum for Wednesday afternoon, October 1.

Art For the Layman classes will be resumed: Studio, September 16; Sketch Club and Painting Classes, September 19; and Children's Saturday morning Classes, September 20.

CITY OF PARIS

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, is offering a special showing of Textiles by Scalandre. These are the same materials used in remodeling of the Presidential Mansion in Washington, D. C.

Also shown during the month is an Exhibition of Oils and Watercolors by Grau Sala, and a group of Oils by a number of French painters including Bombois, Brandel, de Botton, Broders, Florquin, Gall, Laville, Serveau, de Tesson, and Vendar.

A.I.A. ACTIVITIES

(From Page 27)

Convention which will be held in Seattle next summer, reported indications already point to a record attendance by architects from all parts of the world.

The Bowling League began its sixth session September 3rd, under the guidance of Arnie Gangnes and Richard Parker.

New Members. Charles A. Baylon and Nathan Wilkinson, Jr., Corporate Members; and reinstatement of William A. Trimble as Corporate Member upon his return to the Chapter following residence elsewhere. Associate Members newly affiliating include Leonard G. Nash, Dwight R. Butterfield, and John C. Bryant, Jr., Junior Associates.

SAN DIEGO CHAPTER

"Founders Night" was observed on August 20th with the meeting being devoted to "Old Timers" in the Chapter and area. A good turn-out enjoyed the evening and a number of important business items were transacted during the business portion of the meeting.

Jack Lewis has been appointed to serve as a

member of the California Council By-Laws Committee, and Louis Bodmer has been named to the Fees Committee.

NORTHERN CALIFORNIA CHAPTER

Dr. Charles W. Bursch, Chief of Division of School House Planning, California Department of Education, was the principal speaker at the August meeting. He spoke on "Twenty-five Years of Cooperation with the Architects" in planning the schools of California and discussed many phases of the present problems facing school officials including the current State Aid Program.

John Ekin Dinwiddie, Chairman of the Committee on Activities, announced the Chapter would participate in the Annual San Francisco Art Festival to be held October 7-12, in the Palace of Fine Arts Building, San Francisco; the Honor Awards Program, to be held next Spring; and the Marin Art & Garden Show, which is also scheduled for July of next year.

HELD OPEN HOUSE

The San Francisco Architectural Club held an Annual Open House on Friday evening, September 12th. This year's event was in conjunction with the opening of new quarters at 507 Howard Street.

ORANGE COUNTY CHAPTER A.I.A. ORGANIZED

The National Board of the American Institute of Architects has approved formation of the Orange County (California) Chapter of the A.I.A.

The new Chapter will make the 10th chapter of the A.I.A. in the state and will start with a membership of twenty architects.

William E. Blurock of Corona del Mar, is president; George T. Lind of Balboa, secretary; and Paul O. Davis, Los Angeles and Corona del Mar, treasurer.

ARCHITECT PAUL THIRY ON CITY PLANNING COMMISSION

Mayor Allan Pomeroy of Seattle, Washington, has appointed Architect Paul Thiry to membership on the City Planning Commission for a three year term.

Also serving on the Commission is J. Lister Holmes, Architect.

HARVARD UNIVERSITY SCHOLARSHIP IN LANDSCAPE ARCHITECTURE

Good Lighting

as important as
your most important tool!

Just imagine the level of production you'd get in a blacked-out plant—or with illumination that is inadequate or worked only at whim. It's important—as important as fine tools and skilled men—to make sure your plant is equipped with lighting that won't let you down!

Smoot-Holman lighting equipment is built to specifications that do not compromise with quality. Whenever called upon, it dependably delivers the right amount of illumination in the right places. It relieves eye-strain, reduces fatigue—promotes accuracy on close tolerance jobs.

You take pride in your equipment and workers—why not add to their performance with Smoot-Holman lighting?

Yes, we're proud of our precision "tools" too. Here raw metal is being treated against rust and corrosion in one of the finest high temperature chemical baths in the Nation.

OREGON CHAPTER

In conformity with the usual procedure of A.I.A. Chapters throughout the nation, the annual election of officers and directors for the Oregon Chapter was held during June with the following elected for the ensuing year:

H. Abbott Lawrence, President; Holman J. Barnes, Vice-president; Donald W. Edmondson, Secretary; and Robert W. Fritsch, Treasurer.

Regular monthly meetings were resumed in September, following the usual summer vacation. Consideration was given the Chapter's participation in the national convention in Seattle next year.

NORTHERN CALIFORNIA CHAPTER AIA PLANS HONOR AWARDS

Officers and directors of the Northern California Chapter of The American Institute of Architects have announced plans for holding a 1953 Honor Awards Competition.

The event will be open to members of the Northern California Chapter, East Bay Chapter, and the Coast Valleys Chapter, A.I.A.

Entries are to be submitted on 40 in. x 40 in. masonite panels for judgment by a jury of nation-

WE ARE SORRY!

In the July issue of ARCHITECT & ENGINEER magazine the article and photographs devoted to modernization of SAKS FIFTH AVENUE store, San Francisco, failed to disclose the fact that the veneer material used on the exterior (See photograph, Page 19, July A&E), was Ceramic Veneer designed and manufactured by GLADDING, McBEAN & CO. to meet the specifications of Adam L. Gimbel, president of Saks Fifth Avenue and architects Burke, Kober & Nicolais of New York.

Gladding, McBean & Co's Ceramic Veneer "completed an exterior remodel in full harmony of the decor of the original Saks Fifth Avenue store in New York," president Gimbel reported recently to Ray H. Brown, sales manager of Architectural Products for Gladding, McBean & Company, San Francisco.

Also in the same issue the name of the Architect designing the new Garden Bank in San Mateo for the American Trust Company was inadvertently misspelled—it should have appeared as W. D. PEUGH, Architect.

The Editor

ally known architects. Honor awards will be presented to examples of outstanding architectural design in sixteen categories, including residences, schools, churches, hospitals, office buildings, commercial, and industrial.

Following judgment an Awards Dinner will be held in San Francisco and the exhibit will be scheduled for showing throughout major cities of the country.

Charles Pope, William Corlett, and Donald Emmons head the committee organizing the event.

ARCHITECT SELECTED ON CITIZENS COMMITTEE

Donald Beach Kirby, A.I.A. architect of San Francisco, has been named Chairman of a Citizens Committee to conduct a state-wide campaign in favor of the \$15-million bond issue which will be submitted to voters of California on the November ballot.

Others serving on the Executive Board include Henry Wright, H. C. McGinn, Joseph C. Burr, and Hal Reynolds.

ARCHITECT MOVES

The architectural offices of Earl Heitschmidt, A.I.A., have recently been moved to 2010 Wilshire Blvd., Los Angeles 5, California.

Whiting S. Thompson, A.I.A., architect, is associated in this office.

ALASKA CONSTRUCTION

(From Page 15)

concerned, for the Alaska defense construction program is undisputedly undergoing its greatest growth now. Construction resulting from awards of contracts under the present schedule is vast, varied, and constant. New projects are plentiful and work for many trades is abundant. The facts show a bright picture which provides a positive impact on local economy. Colonel Foote said that since the start of the current defense construction in Alaska in 1949, 117 contracts have been completed under supervision of the Corps of Engineers and then turned over to the using agencies which are U. S. Army, Air Force, and the Alaska Communications System. The completed projects, jobs now underway, and those to be put under construction embrace a wide area throughout the territory and are locally supervised by resident field offices at Haines, Elmendorf, Ft. Richardson at Anchorage, Ladd-Eielson at Fairbanks, Whittier, Nome, Kenai, Big Delta, and at other locations.

There are now eighty defense construction jobs underway throughout Alaska. Forty-one of them require from twenty-five to ninety per cent additional progress before completion.

BOOK REVIEWS PAMPHLETS AND CATALOGUES

ART IN MODERN ARCHITECTURE. By Eleanor Bittermann.
Reinhold Publishing Corp., 330 W. 42nd St., New York.
Price \$10.00.

Art in Modern Architecture is the first book to thoroughly present American architectural art, murals, architectural sculpture, and stained and carved glass, and plastics. Since the field has never been thoroughly explored before, the Author presents a very necessary contribution to the knowledge of the surprisingly large range of American architectural art.

More than 300 examples are well illustrated and all are shown in situ so that the relation between art and architecture is clearly expressed, and the book is a factual report of existing work. Many of the examples contained are discussed by the artists and architects themselves. In addition to the artists' texts, the author discusses history, problems, trends, influences, materials, techniques, and future possibilities for art in architecture.

The author, Eleanor Bittermann, is a Phi Beta Kappa graduate of the University of Washington, and her thorough knowledge of research techniques have made this extensive, careful presentation of American architectural art possible.

TECHNIQUES OF PLANT MAINTENANCE—1952. Published by
Clapp & Poliak, Inc., 341 Madison Ave., New York. Price
\$6.00.

A detailed report of the proceedings of the Technical Sessions, sponsored by the American Society of Mechanical Engineers and the Society for the Advancement of Management, held concurrently with the Third Plant Maintenance Show in Philadelphia.

It is the complete transcript of formal papers delivered at the conference and includes also the questions put to speakers and answered by them on the platform. Many graphs, scales, drawings and charts are included in the text.

AUGUSTE PERRET. A Partial Bibliography. By George E. Pettengill. American Institute of Architects, Washington, D. C.
Price \$1.00.

The author, George E. Pettengill, is the librarian for The American Institute of Architects, Washington, D. C., and has compiled this bibliography primarily to secure data as to sources of information on Auguste Perret in connection with the award by The American Institute of Architects of its Gold Medal to Monsieur Perret.

The references are arranged in broad groups such as Writings, Book References, Biography and Criticism, Honors, Reinforced Concrete, Miscellaneous, Major Works, Other Buildings, and Projects.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

406. AIR ENTRAINING AGENT FOR CONCRETE. A new folder describing the advantages of using Vinsol air-entraining agent in concrete is available from Hercules Powder Company. The folder briefly lists the advantages of air-entrained concrete and the methods employed in its production. The use of neutralized Vinsol solution is covered in a series of questions and answers. The leaflet points out that although Hercules does not supply solutions of neutralized Vinsol, these solutions can be obtained from numerous companies in all parts of the country. A list of these suppliers is included in the leaflet. F400, 4 pages, 6/52.

407. FACTS ABOUT RUBBER FLOORS. This booklet is published as part of a new educational program being conducted by the Rubber Flooring Division of The Rubber Manufacturers Association, Inc., to inform architects, interior decorators, homeowners and others about the advantages of modern rubber flooring. This is intended as a non-technical reference book for those who have an interest in building, interior decoration and the flooring business. In it will be found a brief description of the features of rubber flooring, how it is made, information on installations and recommendations for proper maintenance. 15 pages, illus., 8/52.

408. METAL LATH AND FIRE RESISTIVE RATINGS. Eighty-five different types of fireproof constructions are described in the recently released Summary of Metal Lath and Plaster Fire Resistive Ratings. The four page publication summarizes years of fire testing. It includes fire protection information for steel columns, girders and trusses, joists, floors and partitions. This comprehensive test data will be a valuable addition to any engineers, architects, building officials or contractors office. 4 pages, 8/52.

409. AIR FLOW CONVECTORS. A new, easy-to-use catalog on U.S. AirFlow Conveyors is announced by W. C. McCord, President of United States Radiator Corporation. The new catalog is available to heating contractors, wholesalers, architects, builders, and heating engineers without charge. All necessary information for calculation and roughing-in of convactor installations is contained in the catalog, including ratings, dimensions, and technical data. Each type of convactor is fully illustrated, including exploded views to show the interior construction. AR 327, 16 pages, illus., 6/52.

410. ROKADA HEAVY DUTY INDUSTRIAL FLOOR. Available from the LeRoy Olson Company is a set of specifications and product description in booklet form covering the ROKADA HEAVY DUTY INDUSTRIAL FLOOR. The properties of the material and the purposes of the floor are carefully outlined as well as the type of service this type floor is expected to meet. The Rokada Flooring is described as meeting the specifications of the Oxychloride Cement Association and resisting compression to 9,000 lbs. per square inch. A.I.A. 23-D. 20 pages illus., 9/51.

411. PRECAST FLOOR AND ROOF SLABS. A single sheet covering the development of an unusual new school. The innovation consists of the exterior walls formed with the thin dimension of the classrooms, daylight source on two sides of every classroom, and economy of construction. Economical features are described as lower original construction cost, reduced maintenance costs, and reduced heating loads. A.I.A. 4-K, 1 page illus., 5/52.

412. FRAMING ANCHORS FOR JOIST HANGERS. Instructions on the use of Trip-L-Grip framing anchors as joist hangers are detailed in a new folder being distributed to architects and home builders by Timber Engineering Company, affiliate of National Lumber Manufacturers Association. Although the anchors are designed for all secondary connections in wood frame construction, they have their largest use as joist hangers because of resultant economics in time, labor, materials and space. They are adjustable, on the job, to joists of uneven width and depth, and can be applied before installation. They eliminate ledger strips and all notching, fitting and shimming of joists, and do away with old-fashioned toenailing of other connections. An increasing use of these framing anchors is in clear span construction with trussed rafters. By placing the anchors in position on the plate in advance, the trussed rafters are erected more quickly and easily. Detail drawings of other uses of the anchors are included in the folder. 4 pages, illus., 6/52.

413. WINDOW GLAZING WITH PLEXIGLAS. A new booklet gives detailed information, in text and illustration, on glazing industrial and other buildings with flat panels of the acrylic plastic Plexiglas. The booklet is written for plant maintenance engineers, architects, and maintenance superintendents of office buildings and schools, who are confronted with frequent breakage of windows, or other glazing problems which involve high labor costs. The booklet recites properties and behavior of this plastic sheet, and gives detailed data on installation methods and methods of cleaning. Two full pages are devoted to 12 detail drawings which show how to install the shatter-resistant plastic in wood and metal sash. Tables list percentages of solar heat and visible light transmitted, and recommended thickness for lights of various sizes. A.I.A. 26-A-1, 16 pages, illus., 7/52.

PACIFIC PORTLAND CEMENT

A current advertising schedule by Pacific Portland Cement Company and Ideal Cement Company outlines the recent affiliation of Pacific with Ideal.

The joining of Pacific, as a subsidiary, and Ideal brings together two of the nations oldest cement manufacturing companies. Pacific is now in its 50th year, and Ideal has passed the half century mark in serving western building.

Pacific, with three mills, serves California and Oregon, and Ideal, with general offices in Denver, Colorado, serves 22 states.

AMERICAN SOCIETY FOR TESTING MATERIALS

The American Society for Testing Materials, at its recent annual meeting in New York City recently, selected ten technical leaders in the field of engineering materials for receipt of the Society's Award of Merit.

Of the ten men so selected, one was from the Pacific Coast.

F. D. Tuemmler, head of the Analytical Standardization Department of the Shell Development Company, Emeryville, California, was awarded an Award of Merit for "Significant and valued service, particularly in the work of Committee D-2 on Petroleum Products and Lubricants," and in the coordination of that work with other ASTM committees.

Elected to serve as president for the following year was Dr. Harold L. Maxwell, Supervisor of Mechanical Engineering Consultants, E. I. du Pont de Nemours & Co., Inc., Wilmington, Del. Other officers chosen included Norman L. Mochel, manager Metallurgical Engineering, Westinghouse Electric Corp., Philadelphia; and directors George R. Gohn, New York; William H. Lutz, Buffalo; Howard K. Nason, St. Louis; Adolph O. Schaffer, Nicetown, Pa.; and Myron A. Swayze, New York.

MODULAR COORDINATION FOR LOWER BUILDING COSTS

The Modular Coordination Office of the American Institute of Architects indicates the educational activities of the group during the coming year will include consideration of a directory of Modular-size building products.

Modular Coordination is a system of coordinating the designer's dimensions for a building with the actual size units of the materials with which it is to be constructed. The program is a joint effort of The American Institute of Architects, the American Standards Association, The Producers Council, the National Association of Home Builders, and the Housing and Home Finance Agency of the government.

ESTIMATOR'S GUIDE

BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight charge, at least, must be added in figuring country work.

BONDS—Performance or Performance plus Labor and Material Bond(s), \$10 per \$1000 on contract price. Labor & Material Bond(s) only, \$5.00 per \$1000 on contract price.

BRICKWORK—MASONRY—

Common Brick—Per 1 M laid—\$100.00 up (according to class of work).
Face Brick—Per 1 M laid—\$200.00 and up (according to class of work).
Brick Steps—\$3.00 and up.
Common Brick Veneer on Frame Bldgs.—Approx. \$1.20 and up—(according to class of work).
Face Brick Veneer on Frame Bldgs.—Approx. \$2.00 and up (according to class of work).
Common Brick—\$36.00 per M—truckload lots, delivered.

Face Brick—\$81.00 to \$106.00 per M, truckload lots, delivered.

Glazed Structural Units—
Clear Glazed—
2 x 4 x 12 Furring.....\$1.60 per sq. ft.
4 x 6 x 12 Partition.....\$1.90 per sq. ft.
4 x 6 x 12 Double Faced
Partition.....2.25 per sq. ft.

For colored glass add.....30 per sq. ft.
Marble Fire Brick—\$105.00 per M—F.O.B. Pittsburgh.

Fire Brick—Per M—\$111.00 to \$147.00.
Carriage—Approx. \$10.00 per M.
Paving—\$75.00.

Building Tile—
8x5 1/2x12 inches, per M.....\$139.50
6x5 1/2x12 inches, per M.....105.00
6x5 1/2x12 inches, per M.....84.00

Hollow Tile—
12x12x12 inches, per M.....\$146.75
12x12x12 inches, per M.....158.85
12x12x12 inches, per M.....177.10
12x12x12 inches, per M.....235.30
F.O.B. Plant

BUILDING PAPER & FELTS

1 ply per 1000 ft. roll.....\$5.30
2 ply per 1000 ft. roll.....7.80
3 ply per 1000 ft. roll.....9.70
Brownlin, Standard 500 ft. roll.....6.85
Stallkraft, reinforced, 36 in. by 500 ft. roll.....7.00

Sheathing Papers—
Asphalt sheathing, 15-lb. roll.....\$2.00
" " " " 30-lb. roll.....2.79
Blue Cement, 21-lb. roll.....2.79
Damp Plasterboard, 40-lb. roll.....5.10

Felt Papers—
Deadening felt, 3-lb., 50-ft. roll.....\$3.23
Deadening felt, 1-lb.,.....3.79
Asphalt roofing, 15-lb.,.....2.79
Asphalt roofing, 30-lb.,.....2.79

Roofing Papers—
Asphalt Rtg., 15 lb.,.....\$2.09
Standard Grade, 108 ft. roll, light.....1.87
Smooth Surface, Medium.....2.18
Heavy.....2.56
M. S. Extra Heavy.....2.76

BUILDING HARDWARE—

Sash cord com. No. 7.....\$2.65 per 100 ft.
Sash cord com. No. 8.....3.80 per 100 ft.
Sash cord spot No. 7.....3.65 per 100 ft.
Sash cord spot No. 8.....3.35 per 100 ft.
Sash weights, cast from \$100.00 ton.....
1-ton lots, per 100 lbs.....\$3.75
Less than 1-ton lots, per 100 lbs.....\$4.75
Nails, per keg, base.....\$11.80
8-in. spikes.....11.80
Rim knob lock sets.....1.80
Butts, dull brass plated on steel, 3/4x3/2......76

CONCRETE AGGREGATES—

The following prices net to Contractors unless otherwise shown. Carload lots only.

	Bunker per ton	Del'd per ton
Gravel, all sizes.....	\$2.44	\$2.90
Top Sand.....	2.28	3.13
Concrete Mix.....	2.38	3.06
Crushed Rock, 1/2" to 3/4".....	2.38	2.90
Crushed Rock, 3/4" to 1 1/2".....	2.38	2.90
Roofing Gravel.....	2.91	2.90
River Sand.....	2.50	3.00
Sand.....		
Lapis (Nos. 2 & 4).....	3.56	3.94
Olympic (Nos. 1 & 2).....	3.56	3.88

Cement—

Common (all brands, paper sacks), carload lots, \$3.55 per bbl. f.o.b. car; delivered \$3.60.
Per Sack, small quantity (paper).....\$1.05
Carload lots, in bulk per bbl.....2.79
Cash discount on carload lots, 10c a bbl., 10th Prov., less than carload lots, \$4.00 per bbl. f.o.b. warehouse or delivered.
Cash discount 2% on L.C.L.

Trinity White { 1 to 100 sacks, \$13 sack
warehouse or del.; \$7.56
Madusa White { bbl. carload lots.

CONCRETE READY-MIX—

1:2:4 mix, to 10 yards*.....\$12.00
10 to 100* yards.....11.00
100 to 500 yards.....10.50
Over 500 yards.....10.30

* Delivered to site.

CONCRETE BLOCKS—

	Hay-dite	8a-salt
4x8x16-inches each.....	\$17	\$18
8x8x16-inches, each.....	22	22.5
8x8x16-inches, each.....	26	26
12x8x16-inches, each.....	34	39
12x8x24-inches, each.....	60	60

Haydite Aggregates—
3/4-inch to 3/8-inch, per cu. yd.....\$7.25
3/8-inch to 3/4-inch, per cu. yd.....7.25
No. 6 to 0-inch, per cu. yd.....7.25

DAMP-PROOFING and Waterproofing—

Two-coat work, \$9.00 per square.
Membrane waterproofing—4 layers of saturated felt, \$10.00 per square.
Hot coating work, \$5.00 per square.
Medusa Waterproofing, \$3.50 per lb. San Francisco Warehouse.

Tricocon concrete waterproofing, 60c a cubic yd. and up.

ELECTRIC WIRING—\$15 to \$20 per outlet for conduit work (including switches).

Knob and tube average \$6.00 per outlet.

ELEVATORS—

Prices vary according to capacity, speed and type. Consult elevator companies. Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about \$9,500.00.

EXCAVATION—

Sand, \$1.00: clay or shale, \$1.50 per yard. Trucks, \$30 to \$45 per day.

Above figures are an average without water. Steam shovel work in large quantities, less; hard material, such as rock, will run considerably more.

FIRE ESCAPES—

Ten-foot galvanized iron balcony, with stairs, \$250 installed on new buildings; \$300 on old buildings.

FLOORS—

Asphalt Tile, 1/8 in. gauge 18c to 35c per sq. ft.

Composition Floors, such as Magnesite 40c-\$1.25 per sq. ft.

Linoleum, standard gauge, sq. yd.....\$2.75

Mastipave—\$1.50 per sq. yd.

Battleship Linoleum—1/8"—\$3.00 sq. yd.

Terazzo Floors—\$1.50 per sq. ft.

Terazzo Steps—\$2.50 per lin. ft.

Mastic Wear Coat—according to type—20c to 35c.

Hardwood Flooring—

Oak Floor—g-T & G—Unfin.—

	1/2x2 1/2	3/4x2 1/2	1x2 1/2
Clear Old, White.....	\$425	\$405	\$
Clear Old, Red.....	405	380	\$
Select Old, Red or White.....	355	340	\$
Clear Pin, Red or White.....	355	340	335
Select Pin, Red or White.....	340	330	325
#1 Common, Red or White.....	315	310	305
#2 Common, Red or White.....	305	300	280

Prefinished Oak Flooring—

	Prime	Standard
1/2 x 2.....	\$369.00	\$359.00
1/2 x 2.....	380.00	370.00
3/4 x 2 1/2.....	390.00	381.00
1 x 2.....	375.00	365.00

3/4 x 3/4 2nd & 8tr. Jhd. EM.....	390.00
3/4 x 2 1/2 2nd First Grade.....	400.00
3/4 x 2 1/2 2nd Grade.....	360.00
3/4 x 2 1/2 3rd Grade.....	320.00
Floor Layer Wage \$2.50 hr.	

GLASS—

Single Strength Window Glass.....\$.30 per sq. ft.
Double Strength Window Glass......45 per sq. ft.
Plate Glass, 1/4 polished to 75.....1.60 per sq. ft.
75 to 100.....1.74 per sq. ft.
1/4 in. Polished Wire Plate Glass.....2.35 per sq. ft.
1/4 in. Rgh. Wire Glass......71 per sq. ft.
1/4 in. Polished Wire Plate Glass.....2.00 per sq. ft.
1/4 in. Rgh. Wire Glass......44 per sq. ft.
1/4 in. Obscure Glass......40 per sq. ft.
3/4 in. Obscure Glass......44 per sq. ft.
1/4 in. Heat Absorbing Obscure......58 per sq. ft.
1/4 in. Heat Absorbing Wire......86 per sq. ft.
Glazing of above additional \$1.15 to 3.00 per sq. ft.
Glass Blocks, set in place.....3.50 per sq. ft.

HEATING—

Average, \$3.50 to \$4.00 per sq. ft. of radiation, according to conditions.
Warm air (gravity) average \$64 per register.
Forced air average \$91 per register.

CHINA SENDING ENGINEERS TO CENTENNIAL IN CHICAGO

The Nationalist Chinese Government is sending two official delegates from its headquarters on Formosa to the Centennial of Engineering to be held in Chicago this summer.

Lenox R. Lohr, president of the Centennial, also announced that South America will send 150 to the celebration between September 3 and 13.

CONSTRUCTION INDUSTRIES COMMITTEE REVIEW OAKLAND BUILDING TRENDS

"This Is Blueprint Time" featured the recent 5th annual meeting of the Construction Industries Committee of the Oakland Chamber of Commerce, with consideration of "Advance Planning of Deferred Projects" discussed by Dr. Kent Friel, Oakland City Schools; James H. Anderson, AIA, Architect, Oakland; and Frederic A. Chase, executive secretary of the California Council of Architects, Los Angeles, one of the highlights of the conference.

John F. Tulloch, Contractor and chairman of a committee on consolidation indicated checking of plans by the City of Oakland will soon be consolidated into one department, rather than spread through six departments as at present.

Marcus S. Carlson, Alameda county building official, reported greater uniformity in codes among the 20 jurisdictions of the East Bay, and Edward H. Morrill discussed progress in developing a uniform plumbing code for the area.

"Building design has completed its period of radical and abrupt change, and now is approaching a more or less static form which we can expect to continue in its popularity for the next few years," said Architect Anderson, discussing advance planning.

"Thus it is safe to plan now those structures which will be needed during at least the next five year period, without danger of the design becoming outmoded."

Chase said "a new city is being born every

week in America," with 75,000 babies a week breaking all population increase records and creating a vast new market for all kinds of goods and services, including construction, during the next decade.

LOS ANGELES VOTED "NO"—The widely debated public housing program in Los Angeles, which was killed by City Council action but referred to the voters by its sponsors, was defeated by a 120,000 plurality of voters against the tax subsidized housing projects.

Your clients will like the "extra" finish of built-in telephone facilities

You can make planned telephone facilities a part of your building plans so easily. And the popularity of conduit for concealed telephone wiring and conveniently located telephone outlets shows that clients like the extra finish they give to a new home. Appealing, too, is the fact that planned facilities allow them to change the position of their telephone, or add a new instrument later without marring the beauty of their home with exposed wiring.

Just call Pacific Telephone's free Architects and Builders service. They'll be glad to help you plan for better living tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone

IN THE NEWS

NEW BOARD MEMBER NAMED TO CENTENNIAL OF ENGINEERING

Fred G. Gurley, president of the Santa Fe Railway, has been elected a member of the board of directors of the Centennial of Engineering which is being held in Chicago this summer.

The board is comprised of thirty-seven national leaders in industry, engineering and business.

PLAYGROUND EXPANSION FOR CITY OF LOS ANGELES

Plans have been completed for construction of additional playgrounds and recreational centers throughout the City of Los Angeles, according to City Recreation and Park Department officials.

Some \$2,000,000 will be expended for this project.

FEDERAL FUNDS APPROVED FOR NEW SCHOOL

Federal funds have been approved and working drawings accepted for the construction of a new \$350,000 Elementary School building in Richmond, California.

The structure will comprise 12-classrooms including kindergarten, administration, multi-purpose, kitchen and toilets, and will be of frame and stucco construction.

Chas. F. Strothoff, San Francisco, is the architect.

W. J. HENSON HOLDS LARGE ARIZONA HIGHWAY CONTRACTS

W. J. Henson, construction firm of Prescott, Arizona, has three contracts totaling \$1,210,322 with the Arizona State Highway Department for road construction on the new Black Canyon Highway (State Route 69), which runs due north from Phoenix.

When completed, the Black Canyon route will save about one hour's driving time between Phoenix, Prescott, Flagstaff and other northern communities.

COLORADO ENGINEER ELECTED PRESIDENT

Mark U. Watrous, chief engineer of the Colorado Department of Highways, has been elected president of the Western Association of State Highway Officials, succeeding W. A. Bugge, Washington State Highway Director.

Other officers elected to serve for the ensuing year include: E. V. Miller, Idaho highway engineer, vice-president; W. E. Wiley, engineer, division of economics and

statistics, Arizona Highway Department, secretary-treasurer; and D. C. Greer, Texas highway engineer, and W. C. Williams, Oregon assistant highway engineer, executive committee members.

ELECTED PRESIDENT PABCO COMPANY

William L. Keady, formerly president of the United States Gypsum Company and the Marathon Paper Company, has been elected president of Pabco Products, Inc.

Wm. H. Lowe, president of Pabco, was named chairman of the Board replacing Richard S. Shainwald who becomes Honorary Chairman of the Board of Directors.

ARCHITECT MOVES

Edward O. Blodgett, architect, has moved his offices from 1989 Hoover Avenue, Oakland, to 251 Kearny Street, San Francisco, where he will engage in the general practice of architecture.

RADIO STATION FOR OAKLAND

Radio station KROW, Oakland, is constructing a new broadcasting station on Sand Island in San Francisco Bay at an estimated cost of \$45,000. Sand Island is situated opposite the San Francisco-Oakland Bay Bridge toll plaza.

Oakie C. Johnson of Oakland is the architect. The building will be of 1-story frame and stucco construction on a pile base.

LOW RENTAL SALINAS PROJECT

The Housing Authority of Salinas is completing details for the construction of a 100-unit low rental housing project in the City of Salinas. The buildings will be of one and two story frame and stucco construction.

Butner, Holm & Waterman of Salinas are the architects.

REMODEL BUTTE COURT HOUSE

The Board of Supervisors of Butte County have authorized funds for remodeling the County Court House in Oroville. Improvements will include remodel of the interior, installation of an air conditioning system in a number of offices and other improvements.

This P. Dunlap of Oakland is the architect.

ARCHITECT SELECTED

The Roseville High School District has commissioned architect Gordon Stafford of Sacramento, to draft plans and specifications for the construction of a new high school building in Roseville.

SAN FERNANDO VALLEY HOME SHOW BIG SUCCESS

The first San Fernando Valley Home Show, sponsored by the Architects of San Fernando Valley, proved to be one of the most successful events of a similar nature held in southern California this year.

More than 20,000 persons visited the material dealers' and home makers exhibits which were displayed in the Notre Dame High School auditorium in Sherman Oaks.

CONTRACT AWARDED FOR NEW BUILDING

The Johns-Manville Corp. has awarded a contract for design and construction of a new 80,000 sq. ft. building to be located at Watson, California, to the H. K.

Ferguson Co., industrial engineers and builders.

The project will consist of a rigid steel frame U-shaped structure.

NEW HIGH SCHOOLS FOR PHOENIX AREA

Voters of the Phoenix Union High Schools and Phoenix College District recently approved a \$3,450,000 bond issue by a 5 to 1 ratio to erect two new high schools and expand and improve existing facilities. Plans are being submitted to the Board of Education by local architects.

KING APPOINTED TO DMEA FIELD TEAM

J. H. East, Jr., Regional Director of the Bureau of Mines, has announced the appointment of William H. King of Denver as executive officer of the Defense Minerals Exploration Administration's Field Team.

King will head DMEA operations in Arizona, Colorado, New Mexico, Utah and Wyoming.

BRANCH BANK FOR MODESTO

The Modesto Bank & Trust Co. has started construction on a new branch bank building in west Stanislaus County, comprising a 1-story brick and frame structure which will cost approximately \$51,240.

John W. Bomberger of Modesto is the architect.

ARIZONA'S ASSESSED VALUE OVER 1951

The Arizona Tax Commission recently announced total assessed valuations for tax purposes in the state was \$878,927,131, an increase of \$50,848,946 over last year.

Commission Chairman Thad M. Moore, said Maricopa County, with a new valuation of \$311,101,169, shows the largest gain of any of the counties.

GARAGE BUILDING FOR STOCKTON

A new garage building, providing parking facilities for 500 automobiles, is being constructed in Stockton for the owner Chas. M. Weber, local merchant and businessman.

The project is being built under the direction of John I. Gould, Structural Engineer of San Francisco, and comprises a 3-story building with roof parking, of reinforced concrete. Cost is estimated at \$800,000.

ST. MARY'S SQUARE UNDERGROUND GARAGE

The Parking Authority of the City and County of San Francisco awarded a contract to Haas & Haynie Contractors, for the construction of an underground garage at St. Mary's Park, corner of Pine, Grant and Kearney streets in San Francisco.

The garage will have a capacity of 933 automobiles, will contain 275,000 sq. ft. and cost an estimated \$2,000,000.

John I. Gould, San Francisco, is the Structural Engineer.

SOUTHERN CALIFORNIA BUILDING ACTIVITY

Sixty-eight southern California localities issued \$107,647,288 worth of building permits during July, or \$24,555,748 more than the total for July last year, according to figures published recently in the Los Angeles Times.

The total dollar-value of permits issued by the 68 localities in July brought their aggregate for the first seven months of

this year to \$625,287,887—with \$5,335,481
of the all time high set in 1951.

ARMY'S DORMITORY FOR CASTLE AIR FORCE BASE

A. B. Nicholson, J. F. Ferry and M. P. Van Valsenberg of Pasadena, were low bidders on a group of buildings to be built at the Castle Air Base near Merced, California.

The bid of \$2,155,535 includes a new men's dormitory, mess and administration buildings and a central steam plant.

APPOINTED ADMINISTRATIVE ASSISTANT OF DALY COMPANY

W. W. Keenan has been named administrative assistant to the president of the Leo A. Daly Company, architects and engineers with offices in Seattle, St. Louis and Omaha, according to a recent announcement by Leo A. Daly, head of the firm.

Keenan was formerly district enforcement director for the office of price stabilization with headquarters in Omaha, Nebraska.

COLLEGE CONSTRUCTION STARTS AT RIVERSIDE

Construction of the new College of Letters and Science of the University of California at Riverside was started during August.

Dr. Gordon S. Watkins, provost of the Riverside campus, reports an initial enrollment of 600 freshmen, sophomore, and junior students is expected in 1953 when the physical plant of the College will be completed.

ARCHITECT SELECTED

Michael Goodman, architect of Berkeley, has been commissioned by the Board of Supervisors of San Mateo County to draft plans and specifications for the construction of a new \$1,500,000 Court House building in Redwood City, and to design a \$2,000,000 addition to the present county Court House.

BRITISH COOLING ON PUBLIC HOUSING

Public housing is fast losing support in Great Britain, according to Hugh H. Evans, vice-president and manager of Western Federal Savings and Loan Association of Los Angeles, who recently returned from London and the Continent, where he spent some time investigating the housing situation.

High taxes, inadequate facilities and red tape are the major factors in convincing the public that their housing program is not going to work. It is estimated that 90 per cent of the people will be housed partly at the expense of the other 10 per cent, under the present government planning.

AIRCRAFT SHOPS BUILDING

The Corps of Engineers, U. S. Army, is constructing a group of aircraft buildings at the Travis Air Force Base near Fairfield at a cost of \$667,270.

The 1-story structure under contract with Del E. Webb Construction Company of Phoenix, Arizona, will be of timber frame reinforced concrete containing 47,300 sq. ft.

ARCHITECT OPENS NEW OFFICES

A. John Brenner, Architect, has opened new offices in the Title and Trust Bldg. in Phoenix, Arizona, for the general practice of architecture.

IN THE NEWS

NEW BOARD MEMBER NAMED TO CENTENNIAL OF ENGINEERING

Fred G. Gurley, president of the Santa Fe Railway, has been elected a member of the board of directors of the Centennial of Engineering which is being held in Chicago this summer.

The board is comprised of thirty-seven national leaders in industry, engineering and business.

PLAYGROUND EXPANSION FOR CITY OF LOS ANGELES

Plans have been completed for construction of additional playgrounds and recreational centers throughout the City of Los Angeles, according to City Recreation and Park Department officials.

Some \$2,000,000 will be expended for this project.

FEDERAL FUNDS APPROVED FOR NEW SCHOOL

Federal funds have been approved and working drawings accepted for the construction of a new \$350,000 Elementary School building in Richmond, California.

The structure will comprise 12-classrooms including kindergarten, administration, multi-purpose, kitchen and toilets, and will be of frame and stucco construction.

Chas. F. Strothoff, San Francisco, is the architect.

W. J. HENSON HOLDS LARGE ARIZONA HIGHWAY CONTRACTS

W. J. Henson, construction firm of Prescott, Arizona, has three contracts totaling \$1,210,522 with the Arizona State Highway Department for road construction on the new Black Canyon Highway (State Route 69), which runs due north from Phoenix.

When completed, the Black Canyon route will save about one hour's driving time between Phoenix, Prescott, Flagstaff and other northern communities.

COLORADO ENGINEER ELECTED PRESIDENT

Mark U. Watrous, chief engineer of the Colorado Department of Highways, has been elected president of the Western Association of State Highway Officials, succeeding W. A. Bugge, Washington State Highway Director.

Other officers elected to serve for the ensuing year include: E. V. Miller, Idaho highway engineer, vice-president; W. E. Willey, engineer, director of economics and

statistics, Arizona Highway Department, secretary-treasurer; and D. C. Greet, Texas highway engineer, and W. C. Williams, Oregon assistant highway engineer, executive committee members.

ELECTED PRESIDENT PARCO COMPANY

William L. Keady, formerly president of the United States Gypsum Company and the Marathon Paper Company, has been elected president of Parco Products, Inc. Wm. H. Lowe, president of Parco, was named chairman of the Board replacing Richard S. Shainwald who becomes Honorary Chairman of the Board of Directors.

ARCHITECT MOVES

Edward O. Blodgett, architect, has moved his offices from 1889 Hoover Avenue, Oakland, to 251 Kearny Street, San Francisco, where he will engage in the general practice of architecture.

RADIO STATION FOR OAKLAND

Radio station KROW, Oakland, is constructing a new broadcasting station on Sand Island in San Francisco Bay at an estimated cost of \$45,000. Sand Island is situated opposite the San Francisco-Oakland Bay Bridge toll plaza.

Ookie C. Johnson of Oakland is the architect. The building will be of 1-story frame and stucco construction on a pile base.

LOW RENTAL SALINAS PROJECT

The Housing Authority of Salinas is completing details for the construction of a 100-unit low rental housing project in the City of Salinas. The buildings will be of one and two story frame and stucco construction.

Butner, Holm & Waterman of Salinas are the architects.

REMODEL BUTTE COURT HOUSE

The Board of Supervisors of Butte County have authorized funds for remodeling the County Court House in Oroville. Improvements will include remodel of the interior, installation of an air conditioning system in a number of offices and other improvements.

Thos P. Dunlap of Oakland is the architect.

ARCHITECT SELECTED

The Roseville High School District has commissioned architect Gordon Stafford of Sacramento, to draft plans and specifications for the construction of a new high school building in Roseville.

SAN FERNANDO VALLEY HOME SHOW BIG SUCCESS

The first San Fernando Valley Home Show, sponsored by the Architects of San Fernando Valley, proved to be one of the most successful events of a similar nature held in southern California this year.

More than 20,000 persons visited the material dealers' and home makers exhibits which were displayed in the Notre Dame High School auditorium in Sherman Oaks.

CONTRACT AWARDED FOR NEW BUILDING

The Johns-Manville Corp. has awarded a contract for design and construction of a new 80,000 sq. ft. building to be located at Watson, California, to the H. K.

Ferguson Co., industrial engineers and builders.

The project will consist of a rigid steel frame U-shaped structure.

NEW HIGH SCHOOLS FOR PHOENIX AREA

Voters of the Phoenix Union High Schools and Phoenix College District recently approved a \$3,450,000 bond issue by a 5 to 1 ratio to erect two new high schools and expand and improve existing facilities.

Plans are being submitted to the Board of Education by local architects.

KING APPOINTED TO DMEA FIELD TEAM

J. H. East, Jr., Regional Director of the Bureau of Mines, has announced the appointment of William H. King of Denver as executive officer of the Defense Minerals Exploration Administration's Field Team.

King will head DMEA operations in Arizona, Colorado, New Mexico, Utah and Wyoming.

BRANCH BANK FOR MODESTO

The Modesto Bank & Trust Co. has started construction on a new branch bank building in west Stanislaus County, comprising a 1-story brick and frame structure which will cost approximately \$51,240.

John W. Bomberger of Modesto is the architect.

ARIZONA'S ASSESSED VALUE OVER \$51

The Arizona Tax Commission recently announced total assessed valuations for tax purposes in the state was \$978,927,131, an increase of \$50,848,946 over last year.

Commission Chairman Thad M. Moore, said Maricopa County, with a new valuation of \$311,101,169, shows the largest gain of any of the counties.

GARAGE BUILDING FOR STOCKTON

A new garage building, providing parking facilities for 500 automobiles, is being constructed in Stockton for the owner Chas. M. Weber, local merchant and businessman.

The project is being built under the direction of John J. Gould, Structural Engineer of San Francisco, and comprises a 3-story building with roof parking, of reinforced concrete. Cost is estimated at \$800,000.

ST. MARY'S SQUARE UNDERGROUND GARAGE

The Parking Authority of the City and County of San Francisco awarded a contract to Hoas & Haynie Contractors, for the construction of an underground garage at St. Mary's Park, corner of Pine, Grant and Kearney streets in San Francisco.

The garage will have a capacity of 933 automobiles, will contain 275,000 sq. ft. and cost an estimated \$2,000,000.

John J. Gould, San Francisco, is the Structural Engineer.

SOUTHERN CALIFORNIA BUILDING ACTIVITY

Sixty-eight southern California localities issued \$107,647,288 worth of building permits during July, or \$24,553,748 more than the total for July last year, according to figures published recently in the Los Angeles Times.

The total dollar-value of permits issued by the 68 localities in July brought their aggregate for the first seven months of

softly-shaded and functionally correct . . .

the new, beautiful

Suntile

color

increase the efficiency of any HOSPITAL INTERIOR

Sea Green 511

Light Sea Green 513

Suntile SEA GREEN LIGHT SEA GREEN

Recommended for hospital surgery

Shown above are two tones of Suntile Sea Green—an original and modern color designed by Suntile with the aid of Faber Birren, nationally known color authority. The soft tone Sea Green is recommended for surgeries and operating rooms; the bright tone Light Sea Green for other service areas. Both of these are carefully balanced green tints with a special satin finish. The tint is complementary to the color of human tissue and complexion—and will aid vision and reduce ocular fatigue for the surgeon. Both of these Suntile backgrounds present a dignified appearance, are visually restful and physically durable. These are only two of a complete Suntile line of 12 functional colors, adaptable to all parts of a hospital

*you get the right color
plus the permanence
of real clay TILE!*

Can color help hospital interiors fulfill their functions better?

Color authorities say "yes."

There's a *right* color—a most suitable, most beneficial color—for surgeries, wardrooms, corridors, and cafeterias . . .

The *right* color can relieve eye strain of doctors—impart visual and emotional benefits—provide a restful and cheerful environment for both patients and staff.

Suntile's beautiful new line of softly shaded color has been scientifically developed to *fit the function of interiors*—not only in hospitals but in schools, institutions, commercial and industrial buildings.

This "color-fitted-to-the-function" feature gives you another reason for selecting color-balanced Suntile for walls and floors. Other well-known reasons for choosing this *real* clay tile are: permanence, ability to withstand heavy use, sanitation, ease of cleaning, low maintenance!

Write Dept. AE-5 for our new color booklet "Suntile Functional Color Recommendations." See your local Authorized Suntile Dealer. The Cambridge Tile Mfg. Co., P.O. Box 71, Cincinnati 15, Ohio

SUNTILE DEEMS YOU BOTH • EYES AND MIND • DESERVE SATISFACTION

Tile Talk

BY HERMOSA

Someone once said, "Architects speak a language all their own." That may be, but architects also speak in many languages to many people.

Their "alphabet" is made up of materials they use to spell out mankind's progress. One of the most frequently used materials in the architectural "alphabet" is real clay tile. From ancient Babylon to modern times, architects have said many things with this beautiful, basic material.

* * *

Hermosa real clay tile has an illustrious background. It is the modern counterpart of one of man's oldest materials. Today architects use it to epitomize contemporary living at its best.

It is one material that resists the ravages of time—that can take abrasion, food acids, boiling water or flame. It never fades or stains or dulls with age.

* * *

Best of all, Hermosa tile is available in a wide range of colors, textures and sizes. Standard decorative tiles and insert panels range from traditional and provincial to contemporary. Architects frequently design original motifs—have them custom-fired by Gladding, McBean craftsmen.

Hermosa tile is equally at home in kitchens (walls and drainboards) or bathrooms (pullman lavatories, floors and walls) on a fireplace facing, or hospital floors and walls—wherever a structure requires beauty, permanence, sanitation and utility. Can you think of another material that does so many things so well?

Gladding, McBean & Co.

LOS ANGELES SAN FRANCISCO PORTLAND
SEATTLE SPOKANE

DO YOU KNOW THAT—

THE Wallis-Wiley Studio has opened their new building at 2175 East Foothill Boulevard, Pasadena. The building was especially designed to serve activities in the manufacture of fine stained glass.

DR. A. O. BECKMAN, president of Beckman Instruments, Inc., South Pasadena, said the architectural and engineering firm of Donald R. Warren Company of Los Angeles, had been retained to design the new main plant and offices which will be erected for the company on a 45-acre site recently acquired in the LaHabra-Fullerton area. The building will contain 200,000 sq. ft.

ALLISON HONER COMPANY of Santa Ana and Cox Brothers Construction Company of Stanton have been awarded three contracts totaling \$6,673,000 for building facilities at the Camp Pendleton Marine Base.

A 47% increase in the number of construction loans during the first six months of 1952 has been reported by the savings and loan associations in Los Angeles County. The loans pass the same 1951 period by 31%. The report was issued by Neill Davis, executive vice president of the California Savings and Loan League.

ARCHITECT Lloyd LeRaine Pike of Phoenix, Arizona, is preparing plans for the construction of a convent at St. Matthew's Church, West Van Buren Street and 21st avenue, Phoenix, for the Roman Catholic Diocese of Tucson. The convent will be a one-story brick with tile roof, forced air heat and refrigerated cooling and will contain 6500 sq. ft. in floor space.

THE Building Industry Conference Board will make an Annual Award to an outstanding person in the construction industry when the organization holds its annual dinner in San Francisco on October 30th. Recognition is given for "special service to the industry."

PLACE & PLACE, Tucson architects, are preparing plans and specifications for an addition to the University of Arizona Administration Building now under construction by the Harold Ashton Building Company.

JOHN E. MCGOVERN, southern California Federal Housing Administration director, recently announced that Lancaster, Palmdale, and Mojave have again been declared a critical defense housing area under the Defense Housing Program No. 2A for relaxation of credit restrictions.

R. A. SMITH, president of the Southern California Chapter, Associated General Contractors of America; W. D. Shaw, Chapter manager; and J. A. Thompson, a national director, attended the organizations annual mid-year board meeting in White Sulphur Springs, W. Va., recently.

ARCHITECTS William G. Corlett, Oakland; John Lyon Reid, San Francisco, and Stiles O. Clements and Herbert J. Powell of Los Angeles, have been appointed to a new Earthquake Safety Advisory Board by Director of Public Works Frank B. Durkee.

HENRY C. SOTO, President of the Los Angeles Chapter, California Landscape Contractors' Association, presided at the recent First Annual Convention of the Association which was held on Catalina Island with more than 100 delegates in attendance.

STANLEY ELECTRIC TOOLS has moved its New York offices and salesrooms from 100 Lafayette Street to new quarters at 40 Worth Street, where they have leased seven large offices. Stanley Electric Tools is a division of The Stanley Works.

BROADENING The Field of Industrial Engineering, is the theme of the 16th Annual Time and Motion Study and Management Clinic scheduled for Nov. 5-6-7, Sheraton Hotel, Chicago, sponsored by Industrial Management Society.

BUSINESS should be good this fall with 97.8 per cent of working force employed.

. EDITORIAL NOTES .

PRIVATE ENTERPRISE READY

There are probably several billion-\$ worth of private-enterprise construction projects on the West Coast at this time, that are seriously contemplated, on drawing boards, or ready for launching.

Such a vast stored-up building activity represents thousands of new homes, many new and expanded manufacturing and industrial plants, untold commercial structures, and other buildings representing every phase of each single community's economic and cultural advance. Not to mention the remodeling of present structures to bring them up to modern standards of architectural design, utility of occupancy, and customer-client acceptance.

The far reaching benefits derived from such construction projects can not be easily determined, and most certainly can not be measured in terms of any dollars and cents volume of building permits.

New factories are built and existing plants expanded to supply a customer demand for products. New markets and new products are developed to serve scientific and technical advances in living, and new houses are built in conformity with population growth trends and family increases.

Every project must be carefully planned; properly financed; adequately supplied with building materials and products and experienced construction personnel; equipped with the newest machinery or furnishings; and "ready-made" for designed occupancy.

In all of this there is a community interest, sharing of financial risk and responsibility, and co-operative community pride. Such a great volume of potential building is not the result of guessing, but is based upon the most careful reckoning of the needs of the rapidly growing West.

Private enterprise is certainly well prepared and ready to move forward.

* * *

American industry is spending about \$25 billion a year for new plants and equipment—which means new jobs for America's growing population.

* * *

INTELLIGENCE NEEDED

Modern progress in media for the dissemination of news and information to the public, has placed a grave and important responsibility on every American citizen.

Radio and television, for example, now offer candidates seeking political office an opportunity to camouflage their real thinking by placing great

emphasis on personality and charm. One major television network has a "charm school" where "clients" may learn pleasing gestures and proper timing conducive to the best TV appearance. Lighting, make-up, and other mysteries of the television art are explained to political candidates so they may "come through" to voters with maximum impact.

It is unlikely that proper lighting, gestures, and timing will strengthen the candidate's character, nor will pancake make-up improve his ability in office, or heighten his sincerity and statesmanship.

The individual voter will, therefore, have to put an "air" or "televised" candidate through a rigid examination to distinguish between the showmanship and statesmanship of the individual.

At the General Election in November, voters will pick a President, Vice-President, thirty-four United States Senators, four hundred and thirty-five Congressmen, and a host of local city, county and state officials throughout the nation. This is a challenge to every voter to pick governmental representatives who can and will carry on the American way of life.

* * *

"We can never hope to find security for ourselves or our nation by destroying the legitimate incentive of others. We can never win by imposing penalties upon thrift and success";—Benjamin F. Fairless, Pres, US Steel Corp.

* * *

FRUITS OF SOCIALISM

Socialism is like a high tension wire—once you grab hold of it, you can not let go.

This simple lesson can be learned by taking a searching look at the mutual defense treaty negotiated by the United States, Australia, and New Zealand.

New Zealanders are contributing only \$70-million as their share of mutual defense in the Pacific . . . total budget is approximately \$590-million.

One of the principal reasons they can not contribute more is because almost one-half of their total national budget, about \$273-million, must be used to meet the continuing costs of the welfare programs which the socialists inaugurated and left in their laps when the Socialists were voted out of office more than two years ago.

It is not difficult to see from this graphic example, that once you yield to socialism, it stays with you, and you can not remove it by merely voting someone out of office.

COLORFUL CLAY BRICK

Background for merchandising

Whether it is greater "lure power" for the store front or dramatic backdrop for interior displays, colorful Clay Brick provides the ideal setting for modern retailing. And best of all, one wall does it all! Saves on overhead too... never needs painting—keeps its ever-new look for decades. Economy, functional objectives, and "that substantial look" are three big reasons for including colorful Clay Brick in your next project.

NEWS and COMMENT ON ART

PORTLAND ART MUSEUM

Thomas C. Colt, Jr., Director of the Portland Art Museum, West Park and Madison, announces the Fall season of special events and exhibitions will open during October with a number of outstanding exhibits.

A review of the work of Henri Matisse; drawings by Oregon artists; a decade of Painting in Portland, by Carl Morris; and the annual display of Oregon Advertising Art—1952, will highlight the October exhibitions.

SAN FRANCISCO MUSEUM OF ART OPENS BRANCH

The Parkmerced Branch of the San Francisco Museum of Art was opened to the public on October 2nd, with an exhibition of "Modern Masters"

from the Museum's collections.

Among items selected by Dr. Grace L. McCann Morley, director of the Museum, for exhibition were "Gloria" and "Isabella" by Alexander Brook; "Bridge" by Joseph Stella; "Italian Summer" and "Woman Praying" by Maurice Sterne. Andre Derain, Pablo Picasso, Maurice Utrillo, Maurice Vlaminck, and Georges Braque are also represented in the exhibit.

"Modern Masters" will be followed by an exhibit of Latin American artists from the Museum's collection of Latin American Art.

ANNUAL REGIONAL CONFERENCE

California Council of Architects

YOSEMITE PARK

Most controls on building should be ended in the very near future, Glenn Stanton, Portland, Oregon, architect and president of the American Institute of Architects, told delegates to the annual meeting and Sierra-Nevada Regional Conference, held in Yosemite Park, October 8-11.

"One by one controls are being eliminated," Stanton stated, "as more surpluses in materials vital for national defense production develop.

"There is nothing today to stop people from building. Controls are being eased all the time, and one morning soon we should wake up to find that all bans have been lifted," Stanton declared.

Stanton, an outstanding West Coast architect, returned only recently from Washington, D. C.,

where he testified at a number of special governmental meetings advocating a Federal program of releasing more steel for school construction. School administrators, Parent Teacher Association groups, engineers, architects, and building material manufacturers attended the hearings.

The request for release of the much needed steel was granted immediately, Stanton told the conference "thereby indicating that the supply of this metal is in sufficient supply" as the nation's large steel manufacturing companies had reported over a year ago.

Speaking on the overall national situation, Stanton, pointed out that surveys and statistics showed

(See Page 36)

1952 ANNUAL CONVENTION

STRUCTURAL ENGINEERS ASSOCIATION OF CALIFORNIA

Registration at the 1952 Annual Convention of the Structural Engineers Association of California, being held for the first time at the Mission Inn in Riverside, exceeded all previous records and attracted delegates and guests from all sections of California and the West.

The program, under the direction of Ben Benioff, General Convention Committee Chairman, included a wide variety of technical papers, engineering profession discussions, and entertainment. Consideration was also given education features and the training of future engineers.

Convention activities started with a meeting of the Board of Directors on Wednesday evening October 15, and following registration of delegates the next morning, Donald F. Shugart, President of the Structural Engineers Association, officially opened the convention at 2 o'clock with an exchange of greeting with city officials.

The first technical session, with J. S. Barish

acting as Session Chairman, followed with a discussion of "Summary of Earthquake and Blast Symposium" by Prof. C. Martin Duke and Morris Feigen. T. R. Higgins, Director of Engineering, A.I.S.C. led a discussion period.

A Report of Research—California Department of Highways, Bridge Division, was given by Stewart Mitchell.

Research Reports the next morning included Port Hueneme, U. S.C., Cal. Tech, University of California, Stanford, and U. C. L. A.

John J. Gould, President SEAONC, Session Chairman, opened the Friday afternoon meeting with a Report of Research on High Strength Bolts by Prof. F. B. Farquharson of the University of Washington. "The Making of Technical Men for Industry" was the subject of a talk by Prof. Frederick C. Lindvall, California Institute of Technology, and "Civil Engineering Curriculum" — Problems of adequate

OFFICE-WAREHOUSE — RALPH C. BEADSWORTH, Architect

A PROBLEM IN MUNICIPAL UTILITY PLANNING

EUGENE ELECTRIC and WATER BOARD

EUGENE, OREGON

By **ARTHUR W. PRIAULX**

How can the governing board of a municipal water and electric utility make any sound long range planning when the area it serves has doubled in population in the short years since World War II and when demand for electric energy has increased 2700 per cent in the past 28 years? That has been the extraordinary problem confronting the Eugene Water and Electric Board.

It has been a challenge to men like Eugene's Ralph C. Beardsworth, architect, who has designed the buildings needed to care for this phenomenal expansion.

Neither Architect Beardsworth nor the businessmen members of the municipal utility's governing

board had any precedent to go by when making their long-range plans. There were many forecasting a recession at the end of the last war. These men were handling public funds. If they guessed wrong, they would be subjected to severe criticism.

One fact stood out; the need for consolidation of the engineering, service, accounting, administrative, mechanical and supply facilities in one close-knit area. They were scattered and maximum efficiency could not be maintained.

Ralph C. Beardsworth was given the authority to develop a site planning program which would accomplish this objective and at the same time was called upon to anticipate the long range needs of

Information desk and account clerks meet the general public. Ceilings are of exposed roof decking and heavy timbers are also exposed. All offices are finished in knotty hemlock.

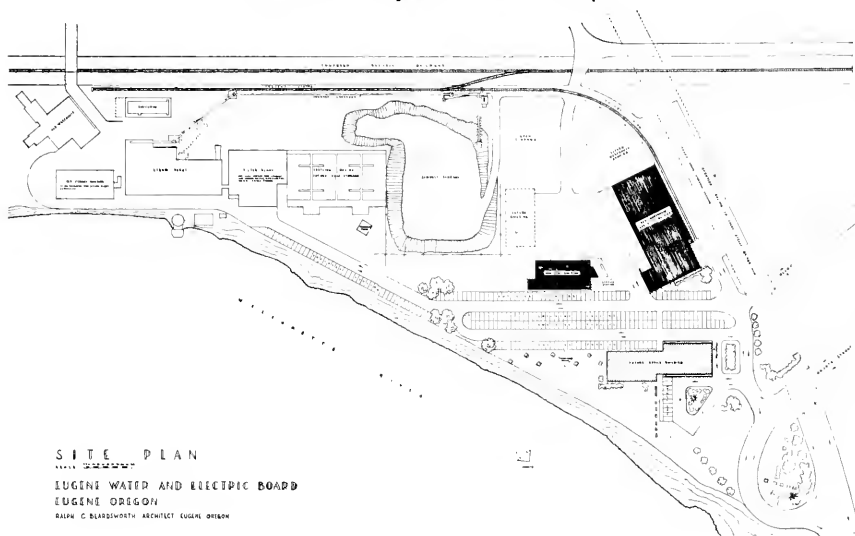

the utilities. A minor obstacle was the requirement that he get the most possible buildings for the least possible money.

On the edge of Eugene's business district, up against a bend in the Willamette River, the Water and Electric Board owned a seven-acre tract on which was a steam stand-by plant, a filter plant,

settling tanks and sawdust storage space. Recommendations were made to purchase an additional nine-acre tract adjoining, which would give the city utility control of the entire property at the bend of the river bounded by the Ferry Street bridge.

The property acquired, Architect Beardsworth took over. His job was to fit immediate and future

SITE PLAN ... Showing Present and Future Development

ENGINEERS' ROOM

On ground floor, is roomy and light is solved by higher intensities and low brightness ratio.

Eye-strain has been largely eliminated. Machine operators are housed in special sound proof rooms which cut down on noise factor in larger offices.

building requirements into the area to coincide with existing steam plant and other facilities. The result today, less than two years later, is a model of long-range planning, of site arrangement and satisfaction of building needs. Even with the com-

pletion of a \$240,000 office building-warehouse, and a \$75,000 shop structure, board members and architect admit to being just one step ahead of expanding needs and a bit breathless from the intense, rapid tempo of keeping ahead of teeming

FIRST FLOOR PLAN . . .

LIGHTING

Is important requirement for drafting room.

Note diagonal arrangement of fluorescent fixture which provide light without shadows when coupled with natural light from full wall of windows.

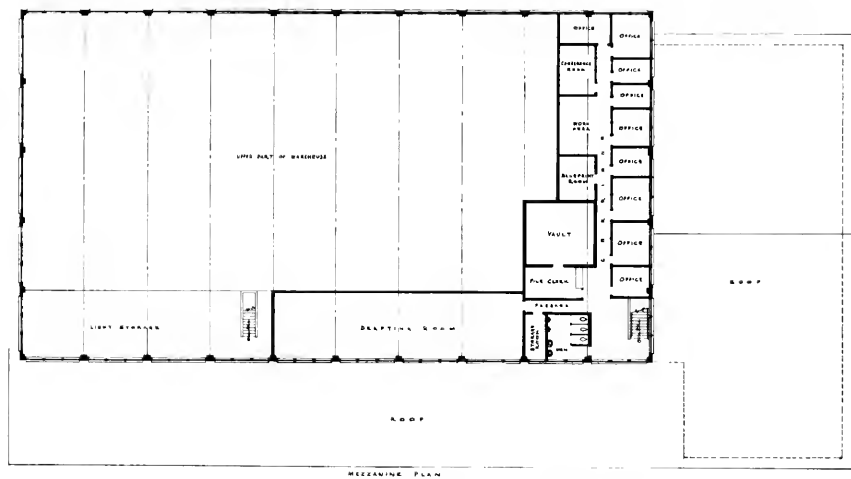

community growth. A ten-year building program has been telescoped into five years.

Central structure of the \$20,000,000 municipal utility system is the newly completed office building-warehouse. This concrete and heavy timber structure, although 234 by 127 feet in size, is so designed that it can be increased by another 100 feet

in length as the need arises. All other structures built or planned are likewise designed by Beardsworth for expansion.

Problems involved in the design of a building combining both warehouse facilities and absorbing also the accounting, administrative, drafting and engineering departments were many. Traffic

MEZZANINE FLOOR . . .

MUNICIPAL PLANNING . . .

flow control has been a major accomplishment by the architect. The general public may come and go from the cashier's office with a minimum of trouble. Field and service men have ready access to warehouse and stock rooms and to a basement lunch room from doors opening off from a covered truck loading platform. Administrative, accounting, engineering and drafting staffs have easy access to each department.

The warehouse is a 180 by 100 foot, post-clear area. The walls and slab floor of the entire building are of reinforced concrete. Nine 100-foot bowstring fabricated wooden trusses span the warehouse area. The spans have a 14-foot rise from bottom chord to roof peak.

To provide a post-free loading area the full length of the warehouse, Beardsworth designed a series of nineteen 50-foot cantilever glulam fir beams which project thirty feet over the truck loading dock and the truck parking space and nineteen feet inside the building. The tapered beams ride on concrete columns where they enter the warehouse wall and are anchored to the concrete floor inside

by a solid wooden post to take care of any strain from heavy snow load.

The offices are located in a 54-foot single story area adjoining the 127-foot end of the warehouse building. An L-shaped balcony or mezzanine occupies an area along the 100-foot end of the warehouse as well as along the full 180-foot wall. The drafting department and engineer staff private offices occupy most of this level.

Fire-proof storage vaults have been built on basement, main floor and mezzanine levels directly above each other. Active accounting records are stored in the main vault and the same size, 18 by 36 foot, basement vault is for dead storage and supplies. The smaller 18 by 20 foot vault on the balcony level protects maps, drawings and engineering records.

A six-foot bay of windows passes completely around the building and supplies natural light for both warehouse and offices. These windows are steel sash.

Two-inch car decking, tongue-and-groove fir, has been used throughout the roof area on the ware-

Glulam beams extend through into warehouse section to form timbers for support of balcony storage. Beam ends are anchored into concrete slab floor to care for extra stress in event of unusual snow load.

Interior of shop showing rigid frame of concrete skeleton. Concrete framing cast in single unit with overhead beams, columns, horizontal beams and corbels tied together. All work may be done indoors.

Interior of warehouse with post-free work area of 100x180 feet. A bay of windows around the entire warehouse section provides daylight.

MUNICIPAL PLANNING . . .

house and over the single-story office area. A built-up roofing of composition over fibre glass insulation covers the office structure. Electric conduit for the single story office area has been laid against the car decking roof, and the fibre glass insulation was split with a knife and laid directly over it. Fluorescent lighting fixtures connect directly with the hidden conduit.

Three-inch tongue-and-groove fir car decking forms the floor of the mezzanine and is designed to support storage of heavy weights in the exposed warehouse section. This section is open to allow lift trucks to operate from the warehouse floor. Asphalt tile floor covering has been used in all office areas.

The car decking becomes the ceiling and is surfaced and has been left exposed in most offices and has been painted.

All offices have been panelled in knotty hemlock and finished with clear rez and varnish to retain

wood appearance. Pattern of the vertical paneling is a V-rustic and all panels are in eight-inch boards. Beardsworth said the vertical paneling enables use of a more economical trim in the rooms.

Lighting levels in the offices and work areas are considerably above the minimum recommended standards and represent the latest trends towards higher intensities and low brightness ratio.

An interesting feature of the long drafting room is the diagonal arrangement of overhead fluorescent lighting fixtures which avoids shadows when coupled with the east window natural light.

A fin-type steam radiation system provides heating in all the offices and overhead down-blast fans which force air past steam coils provide heat in the warehouse and basement. The basement houses a 53 by 71 foot combination meeting and lunch room, kitchen, toilet rooms, telephone equipment room, transformer room, testing laboratory, storage vault and storage room. The basement oc-

A feature of the \$240,000 office-warehouse structure is this out-of-weather loading dock. The roof section is supported by specially designed glu-lam beams. Note camber of beams which ride on a concrete pillars in the wall.

. . . MUNICIPAL PLANNING

cupies about a third of the floor space of the building proper. Lightwells provide much of the basement light.

Gable ends of the main warehouse structure are tongue-and-groove red cedar, one-by-eight inches.

Beneath the balcony in the warehouse section, and opening off the covered loading platform are several functional rooms. One is the warehouseman's office which is countered to keep truck drivers and servicemen from the warehouse. Another is a locker room for repairmen. Entrances from this covered area also lead to basement, warehouse, and administrative offices.

Despite the considerable number of unrelated departments and variety of functions performed within this building, Beardsworth has been able to create a feeling of unity of purpose in the structure.

Structural and Mechanical engineers on the

office building and warehouse were Pierson & Tidball, of Portland. Electrical engineer was J. F. Whitney, Eugene, contractor was E. E. Settergren, of Portland.

Another of the recently completed structures on the site is the shop building where all maintenance and repair work for the entire water and electric system is handled. From trucks and power shovels to transformers, the building has been designed to do the job.

It is a concrete and heavy timber structure with concrete predominating. Timbers support the roof of this 170 by 60 foot structure and make up most of the attractive contemporary industrial service station division on one end of the building.

The main shop building is actually a concrete skeleton, composed of reinforced concrete columns which support concrete roof beams and horizontal

(See Page 42)

The new shop building is a part of the expansion program. Large doorways permit moving of equipment for work and repair, from almost any direction. Again light planning has been given priority. The office building is in the background.

NEW BUILDING FOR
CROCKER
FIRST NATIONAL BANK

OAKLAND, CALIFORNIA

DINWIDDIE CONSTRUCTION COMPANY

General Contractors

**OLD BUILDING
RAZED FOR
NEW BANK
STRUCTURE**

Farmers and Merchants Savings Bank was merged with Crocker First National Bank in 1947.

Opening of the new, million-dollar Crocker First National Bank building in Oakland, California, last August 25th, marked an important milestone in the history of one of California's oldest banking institutions.

Designed by Milton Pflueger, and built by the Dinwiddie Construction Company, the building is a fine example of today's modernistic trend.

The two-story and basement structure embodies the very latest developments and arrangements in office design for the convenience of both cus-

tomers and employees. The building also includes a first floor mezzanine and a partial third floor, with the frame designed to support a full third floor.

William W. Crocker, Chairman of the Board of Crocker First National Bank, in discussing the new building, said "The decision to consolidate with Farmers and Merchants Savings Bank in 1947 was made to provide our Eastbay customers with the best in banking service. The response of Eastbay people to the traditionally friendly service of our

BELOW—Reinforced concrete structural frame in place and Ceramic Veneer exterior being installed on the two street sides of building.

institution was so gratifying that larger quarters became one of our primary objectives only a few months after our Oakland operations started."

The new structure occupies a 100-foot square site, is Class A construction, with heavy steel frame fire protected with concrete, and exterior walls and floor slabs of reinforced concrete.

The exterior is faced with Ceramic Veneer, with base and main entrance of polished Imperial red Swedish granite. The main banking room has a

floor of pink Tennessee marble, with columns of red granite, recalling the main entrance treatment. The warm shades of marble, bronze rails, and walnut paneling in this room are spectacularly set off by the striking back-lighted plexiglass domes in the aluminum, acoustical ceiling.

Especially designed furnishings for the new bank, and the latest in mechanical equipment, including an air conditioning system with mechanical refrigeration, provide ideal working conditions

**SAFE DEPOSIT
VAULT-DOOR**

MAIN BANKING ROOM — Looking Towards 13th Street

throughout the building, winter and summer. Of particular interest is the attractive employees' lunchroom on the roof with adjoining recreation area.

Color consultant Elizabeth Banning was called upon for advice in correlating the over-all color scheme.

The night depository, conveniently located for customer use at the northwest corner of the building, is connected by a steel chute to a basement vault. With the exception of the new safe deposit vaults, which are available to customers, the basement area is devoted entirely to employees' work area.

UNIQUE CUSTOMERS' TABLE — Main Banking Room.

**BUSINESS
DEVELOPMENT**

And Credit department is located on the mezzanine floor.

The safe deposit vault door and vestibule, one of the finest pieces of equipment of its kind, weighs fifty-five tons. Equal to the weight of a switching locomotive. It is more than nine feet in width and height, and approximately four feet thick. The vault door is equipped with time locks and combinations, as well as electrical microphone protection.

Following are some of the outstanding features of the building:

The exterior finish is a beautiful Ceramic Veneer local area manufactured. The eight foot base and twenty-eight foot columns around the main entrance are polished Imperial red Swedish granite, fabricated specially by the manufacturer for this building.

The main banking room floor is of pink Ten-

nessee marble with Rosemont Tennessee base.

Facing on the tellers' cages is Botticino marble.

Walnut paneling is used against the west wall and bleached White Oak paneling on the east and south walls above the tellers' cages.

There are thirty back-lighted plexiglass domes, six feet in diameter, above the tellers' cages. Officers' area is acoustical plaster.

Specially designed furnishings include, special brown textured carpet, loomed curtains, and putty colored leather customers' and officers' chairs.

There are nineteen tellers' cages, the wings of which are of gray finish. The counter surface is Botticino.

Gray rubber tile is used behind the tellers' cages.

The diffused lighting behind the tellers' cages

**EXECUTIVE
DESKS**

**In main banking room . . .
paneling is also in walnut.**

NEW CROCKER BANK . . .

comes from square bronze and satin finished white metal fixtures applied flush to the ceiling.

The main floor area covers 10,000 square feet.

Safe deposit customers' area has bleached Oak paneling. There is a specially designed bronze and glass sliding door leading to the vault itself.

The mezzanine floor, comprising approximately 3500 square feet, is reserved for installment loans, personal loans, automobile loans, and facilities for the credit department, and new business department. Of special interest are the four different pastel colors on the various walls.

Two elevators service the building.

In addition to the refrigeration unit, a precipitation electric air cleaner has been installed. The air is taken from the building and pumped through filter baffles which eliminates all dust particles, and smoke.

Crocker First National Bank opened its Oakland office March 1, 1947, when it consolidated with the Farmers and Merchants Savings Bank, a well-known and respected banking name in Oakland for many years. The pioneer Western financial

institution quickly outgrew the former Farmers and Merchants Savings Bank building and had to acquire larger quarters.

The bank moved to temporary offices, and the former Farmers and Merchants site was retained and additional property secured, so that a modern banking structure could be erected. Demolition of the old bank building was completed in three months, and construction of the new building got underway January 2, 1951.

George W. Hall, vice president and manager of the Oakland office, has been associated with the bank since 1915. A native of Alameda, Hall, in addition to his banking activities, has long been associated with the civic development of the East-bay.

Bank customers enjoy convenient courtesy parking directly across the street from the main entrance of the bank.

Crocker First National Bank was established in 1870 when the First National Gold Bank of San Francisco was chartered with deposits of less than \$100,000. It was the first and only national bank

Lunch Room and Roof Garden for use of Employees.

The September meeting was devoted to a discussion of Earthquake Problems with Harry W. Bolin, Principal Structural Engineer, State of California, Division of Architecture, the speaker.

Bolin recently attended the Centennial of Engineering conclave in Chicago where considerable

attention had been focused on the recent earthquakes in California. Prior to going to Chicago, Bolin had made a personal study of the Tehachapi and Bakersfield areas and reported on his findings of earthquake damage done there.

Jack Lewis served as Program Chairman for the meeting.

WASHINGTON STATE CHAPTER

October was the start of the fall meetings and considerable attention was given to an analysis of the Chapter's objectives and coming programs.

The annual bowling league started its new schedule with twelve teams, two new teams representing the firms of Jones & Bindon, Architects, and Bouillon & Griffith, Engineers, placing teams in the league for the first time. Competition this year is extremely keen and averages to date are on the whole much higher than last year. Leader in individual statistics to date is Richard Parker with a 189 average. Joe Jackson with a 183 is second high man.

New Members: Junior and Student memberships include James E. Hussey, Robert A. Bennig-hof, James Greco, and Carelton Tollefson. Robert M. Jones, and Arnold C. Amundsen, Jr. Associate Membership, Harold J. Nesland.

SAN FRANCISCO ARCHITECTURAL CLUB

Classes in "Art in Architecture," "Structural Engineering for Architects," and "Architectural Design Atelier," designed to assist the student desirous of taking the California Architectural Examination for a license to practice architecture in California, and to refresh architects in certain phases of professional work, are being held for the 51st year.

Producers' Council—Northern California Chapter (See Special Page).

Club have been considerably improved, and are now located at 507 Howard Street in San Francisco.

Classes for this Fall term are under direction of John Garth, Art in Architecture; and George A. Sedgewick, Structural Engineering for Architects.

NORTHERN CALIFORNIA CHAPTER

Chapter objectives, activities and programs for the next few months have been established by President Albert R. Williams, and various committee chairmen, and will be inaugurated with the November meeting.

Included among activities is the annual Honor Awards Program, cooperating with city officials in a number of planning projects, junior relations, and legislative.

Among the New Members are: William B. Fox, Henry V. Chescoe, John L. King, John E. Coyle, Jr., Henry Schubart, Jr., William F. Meaney, all Corporate members and John Cook, Walter Farmer, C. Morrison Stevens, Associate members; and James Johnson, Junior Associate Member.

SOUTHERN CALIFORNIA CHAPTER

Howard D. Mills, Western Vice-President of Lionel D. Edie & Company, Inc. of New York, spoke at the October meeting on the subject, "1953—The Pause That Refreshes." During the recent war, Mills served with the U. S. Treasury as Regional Director of its War Finance Division in Western and Southwestern States and Hawaii, and offered a wealth of observations on conditions throughout the West.

Also speaking on the same program was Dr. C. C. Trillingham who chose as his subject, "What Makes America Great?" Trillingham is Los An-

geles County Superintendent of Schools and is Vice-Chairman of the California State Curriculum Commission.

Reports of the Yosemite Conference were also presented.

Ulysses Floyd Rible served as Program Chairman for the meeting.

WITH THE ENGINEERS

Structural Engineers Association of California

Donald F. Shugart, President; Walter A. Buehler, Vice-President; Lewis K. Osborn, Sec.-Treas.; Office c/o Kistner, Curtis & Wright, Room 203 Architects Bldg., Los Angeles. Directors Arthur W. Anderson, John E. Rinne, Henry J. Degenkolb, Lewis K. Osborn, Ernest C. Hillman, Jr., R. W. Binder, Donald F. Shugart, Walter A. Buehler, and G. E. Goodall.

Structural Engineers Association of Northern California

John J. Gould, President; G. A. Sedgwick, Vice-President; Art B. Smith, Jr., Secretary; Franklin P. Ulrich, Treasurer; Robert P. Moffett, Asst. Sec.; Wm. K. Cloud, Asst. Treas.; Directors Robert P. Dalton, John J. Gould, Leslie W. Graham, J. Albert Paquette, John E.

Rinne, Hyman Rosenthal, and G. A. Sedgwick, Sec. Office, 417 Market St., San Francisco.

Structural Engineers Association of Central California

William H. Peterson, President; Walter S. Wassum, Vice-President; O. T. Illerich, Sec.-Treas.; Ernest D. Francis, M. A. Ewing, and Arthur A. Sauer, directors. Office O. T. Illerich, c/o Div. of Arch., Sacramento.

American Society of C. E. San Francisco Section

Clement T. Wiskocil, President; John S. Longwell, Vice-president; J. G. Wright, Vice-president; H. C. Medbery, Treasurer; R. D. Dewell, Secretary. Secretary's Office, 604 Mission St., San Francisco.

STRUCTURAL ENGINEERS ASSOCIATION OF NORTHERN CALIFORNIA

"Trends in Structural Engineering" was the topic of an address by C. Earl Webb, Chief Engineer of the American Bridge Company, Pittsburgh, Penn., at the October meeting which was held at the Claremont Hotel in Berkeley.

Webb discussed the uses of various types of steel, together with the fatigue and welding of steel. He also outlined flame softening, high tensile bolts and painting.

The November meeting (November 6) will be devoted to a discussion of the Field Bill and sub-

jects related to school house construction. Speakers include Francis Dunn, chairman Education Committee, State Assembly; Mrs. B. D. Bevil, president Congress of Parent-Teachers Association of California; and Mr. J. Merchant, president California Association of School Trustees.

NEW MEMBERS include Albert A. Fink, Baird Heffron, Dimitri P. Krynine, Louis I. Zagoren, and James Reynolds, Jr. JUNIOR MEMBERS, Edward A. Cederborg, James A. Dunlap, George L. Henderson, Thomas J. Lynch, Oleg V. Miram, and Daniel Shapiro.

WALTER L. HUBER NOMINATED TO ASCE PRESIDENCY

Walter L. Huber, consulting engineer of San Francisco, has been nominated for the presidency of the American Society of Civil Engineers. Balloting will be by mail, with the result to be announced as soon as they are compiled.

Huber, a graduate of the University of California, has had a distinguished career in engineering particularly in hydraulic and structural projects. He has designed many important commercial buildings, including the Union Square underground garage in San Francisco.

AMERICAN SOCIETY FOR METALS—PUGET SOUND

The 1952-53 program of the Puget Sound Chapter began with a very interesting presentation of a subject which promises to become increasingly important to the metallurgists of today. Dr. Raymond Ward, with the General Electric Co. as Head of Metallurgical Research at Hanford, Washington, spoke on the topic "Metallurgy and Nucleonics—A General Concept."

Work in this field has been active for only a decade and many of the results of these efforts have been necessarily classified. Under the impetus of the war, atomic energy has become one of the largest businesses in the United States. After it became apparent in 1942 that a chain reaction

SISALKRAFT at work on 8-story Apartment Hotel, Evanston, Ill.

MORE THAN A MILLION SQUARE FEET OF SISALKRAFT went to work on this building

Here SISALKRAFT is doing two jobs at one low application cost: (1) curing concrete floor slabs and (2) protecting the concrete from damage by structural operations and debris. Tougher, harder, dust-free concrete was the result. • On big buildings or homes . . . curing concrete, protecting construction, closing in, covering materials and equipment . . . preventing weather-damage, helping speed completion, improving structural quality

. . . these are a few of many jobs SISALKRAFT does well. Make the most of SISALKRAFT help on every job.

Wright directors.

was possible, many of the problems subsequently encountered in the development of atomic energy were found to be metallurgical. Reactor requirements were severe and involved properties of metals not commonly needed by industry.

**NORTHWEST ENGINEERING
CENTENNIAL A SUCCESS**

The recent Northwest Engineering Centennial at Portland, Oregon, which was sponsored by The Professional Engineers of Oregon, proved to be one of the most outstanding gatherings of engineers ever held on the West Coast.

SPEAKERS—J. M. White president Long-Bell Lumber Company, Longview, Washington (right) and Fred O. McMillan, national president of American Institute of Electrical Engineers and Head of the Electrical Engineering Department of Oregon State College, were participants in the Centennial conferences.

Attendance included many noted engineers from all parts of the nation, and technical and business discussions included many important phases of the engineering profession of today.

Speakers pointed out that mankind has reached a stage of scientific knowledge which will soon enmesh daily events with atomic development. American industrial and agricultural development has done more in a single span of life to benefit people, than has been done in all the world's previous history.

The conference was held in conjunction with the 100th anniversary of the founding of the first engi-

neering society in this country, the American Society of Civil Engineers.

**STRUCTURAL ENGINEERS ASSOCIATION
OF SOUTHERN CALIFORNIA**

The regular October meeting, Alexandria Hotel, Los Angeles, was devoted to "Operation Greenhouse" and "Project Snort." The former was an Atomic Energy Commission sound movie containing a sequence on the response of structures under blast forces, while the latter was a sound movie of the U. S. Naval Ordnance Test Station highlighting the Supersonic Naval Ordnance Research Tract.

INFORMATIONAL MEETING

On September 8, the regular monthly informational meeting at the Palace Hotel was presented by Byron Nelson of Arcadia Metal Products. This program was titled "The Arcadia Door" and consisted of very fine color film showing the application of sliding doors in the modern residence of today.

The program was concluded by a model demonstration showing the construction and installation arrangement of a sliding door and screen.

PRESIDENT'S CONFERENCE

The Annual President's Conference of the Producer's Council was held in St. Louis, Missouri on September 23 through September 25 at the Chase-Park Plaza Hotel.

Our Chapter was very ably represented by President Al West, who gave one of the eight addresses presented by Chapter Presidents. Al's topic, "Everyone is Getting Into the Act", more or less summed up the points brought out by the speakers that preceded him. Al made it quite clear that if it were not for the fact that everyone is getting into the act, the Producer's Council would not be in the fine shape it is in today.

In addition to the talks by the Chapter Presidents, there was the election of the officers of the National Organization, a work shop session for the Presidents where the internal working of the various organizations at the local Chapter level were discussed and a very excellent information meeting. It was the thought that this example could serve as a guide for the local Chapter Organization.

Highlights of this St. Louis meeting were a "get acquainted party" at the home of the National President, Mr. A. Naughton Lane; reports from the National Officers, and addresses given by Executives in the American Institute of Architects.

Mr. R. S. Hammond, Vice President, Johns-Manville Corporation gave an inspiring address entitled "Dignifying the Profession of Selling". It was pointed out by Mr. Hammond that as lawyers, doctors, and architects are professionals, so to are salesmen. He felt that this is particularly true of firms who have membership in the Producer's Council and it is in this organization, affiliated with the American Institute of Architects, where salesmen achieve and maintain a "Code of Ethics." Through their knowledge of their products, their application and their limitations, they have gained the confidence of those in the profession whose responsibility it is to specify quality products.

The results of the election for the officers for the National Producer's Council for the coming year are as follows:

President—Elliott S. Spratt, Hillyard Chemical Co.

First Vice President—R. S. Hammond, Johns-Manville Corp.

Second Vice President—William Gillett, Detroit Steel Products Co.

Secretary—Fred Hauserman, The E. F. Hauserman Co.

Treasurer—F. J. Close, Aluminum Co. of America.

USNOTS discussed the development and construction of the supersonic Naval Ordnance Research Track.

Member W. M. Bostock gave a report on the recent Pacific Coast Building Officials Conference in Spokane, Washington, which he attended.

ENGINEERS AID IN BAKERSFIELD STUDY

Gordon DeSwarte, Charles Stickney, and Harold King of the Structural Engineers Association of Southern California; and Mac Perkins and Howard Carter of the Structural Engineers Association of Northern California, cooperated with the City of Bakersfield in making a safety survey of the earthquake damage to buildings resulting from the recent shocks.

Approximately one thousand buildings were examined and inspected by the group who subsequently made a report of their findings to city and county and other government officials.

ENGINEER IN TOKIO: George J. Kereskes is in Tokio, Japan, where he will remain about a year. He is acting as Chief Structural Engineer to the Planning and Design Branch, Headquarters, Far East Air Forces.

training was the subject of a discussion led by Prof. L. M. K. Boelter, U.C.L.A. The panel discussing this problem included Prof. David M. Wilson, Prof. A. L. Miller, Prof. F. C. Lindvall and others.

Saturday morning was devoted to a consideration of association matters, action on committee reports and a meeting of the Board of Directors.

Golf matches, motion pictures, bridge and canasta, sightseeing trips to Palm Springs and adjacent areas, and dancing rounded out an entertainment program that contributed considerably to the success of the convention.

FEMINEERS

A "Guys and Dolls Fashion Show" highlighted the September meeting of The FEMINEERS, wives of members of the American Society of Civil Engineers, and the Structural Engineers Association of Northern California.

Fashions were presented thru the courtesy of Davis Schonwasser with the commentary by Nerice Fugate. The Dolls (models) were from the House of Charm, while the Small Fry (children) clothes were modeled by members' children.

served as hostesses of the Day, while Mrs. August Waegemann was in charge of reservations. The meeting, attended by many Engineers, was held in the Elks Club, San Francisco.

ARCHITECT JOHN BOLLES HONORED AT CONFERENCE

The second annual Artists Equity Association Fine Arts Award was presented to John S. Bolles, San Francisco, at the Yosemite Park annual conference of the California Council of Architects.

The presentation for "distinguished service in the field of arts and architecture" was made by Glenn L. Stanton, Portland, Oregon, architect and President of The American Institute of Architects.

Among Bolles' recent works are the Hanna Center for Boys in Santa Rosa and the Ping Yuen Public Housing Project in Chinatown.

The award, a symbolic representation of "Prometheus and the Flame," was established by San Francisco Architect Donald Beach Kirby two years ago. It was sculptured in bronze by Gurdon Woods of San Francisco.

AUSTRALIAN ARCHITECTS COMPETE FOR 1956 GAMES STADIUM

Organization authorities for the 1956 Olympic Games to be held in Melbourne, Australia, have announced a competition to select an architect for the main games stadium.

Architects registered in Australia have been invited to submit designs for a stadium to accommodate 125,000 persons.

The successful architect will be given the job of planning and constructing the stadium on the site of the Carlton Cricket Ground.

CALIFORNIA COUNCIL OF ARCHITECTS

(From Page 11)

that building volume has maintained a level almost equal with the first post war years, despite controls and the steel strike this spring.

The demand for new homes has decreased somewhat in some localities as the great home building boom of the past few years has satisfied the immediate demand. In other localities the demand for new homes is still on the increase. People are asking for something better in homes today, he said, and as the supply nears the demand, this requisite for a better built home will become more important to the builder.

More than 600 architects, their wives and guests attended this year's conference which was highlighted with technical sessions devoted to the subjects of "Lift Slab and Tilt-Up Construction," "Architecture Behind the Iron Curtain," and panel discussions on professional activities and organizational plans and policies.

William Koblik, architect of Sacramento and president of the Council, presided at the business sessions assisted by Charles E. Fry of Los Angeles, Donald Beach Kirby of San Francisco, and Culver Heaton of Pasadena.

Of particular interest was the discussion on tilt-up and lift slab construction by C. Henning Vagt-borg, president of Vagt-borg Lift-Slab Corp. of Los Angeles, West Coast licensee for use of the Youtz-Slick method developed by Southwest Research Institute of San Antonio, Texas; and F. Thomas Collins, Consulting Engineer. Growth of the method, economic factors and examples of construction were covered by the speakers.

Architecture Behind the Iron Curtain was the subject of a talk by Thomas H. Creighton, editor of Progressive Architecture. Creighton told of his

experiences and observations obtained during a recent visit to Europe.

Taking as his subject "Little Holes Sink Big Ships," Bert Stewart, Jr., field secretary of the National Automobile Club, with general offices in San Francisco, spoke on various phases of public relations as applied to the architectural profession.

The Women's Architectural League, under the general chairmanship of Mrs. Bolton White, participated in the conference and presented their activities at a Luncheon on Friday, with Charles Matchum, Regional Director of the A.I.A., presiding.

The conference closed with the Annual Sportsman's Dinner on Saturday evening at which members of the Producers Council of America are traditionally honored by the architects.

A program of special entertainment, sports events, and sight seeing trips rounded out the program which was under the general direction of C. Herbert Mullen, Sacramento, assisted by Frank L. Hope of San Diego.

Participating in arranging for this year's outstanding events were: Bourn Hayne, News; David H. Horn, Entertainment; Glenn Balch, Exhibits; Culver Heaton, Finance; Walter S. Stromquist, Grievance; Fred Swartz, Head Table; Victor Abrahamson, Junior Associates; Howard Noleen, Producers Council; John Bomberger, Programs; Lawrence Gentry, Reception; Warren Wright (assisted by Women's Architectural League), Reservations and Registrations; Frank Mayo, Rules and Resolutions; Mrs. Helen (Bolton) White, Women's Activities; and Wendell Spackman, Transportation.

WASHINGTON STATE HAS NEW ARCHITECTS

GOOD LIGHTING

...as important as your most important tool

Engineers...draftsmen...designers... all know the slide rule is an all-important "tool"; but certainly no more efficient than their ability to make full use of it. Don't invite eye-fatigue and impair job performance with poor illumination.

Smoot-Holman lighting equipment can solve this problem—as it has for thousands of workers in other western plants. Made to exacting quality standards, it provides illumination always ample, always correct for the eyes—light that's a perfect partner for production.

Equally important, there is a Smoot-Holman fixture to match any job's specific need! See your Smoot-Holman Lighting Engineer!

SMOOT-HOLMAN COMPANY Anglewood, Calif. Offices in Principal Western Cities • Branch and Warehouse in San Francisco

All important "tools" help assure Smoot-Holman production and quality, too. This modern porcelain enameling furnace fires on permanent "lifetime" finishes at 1000° Fahrenheit.

of water damage for over two years.

"We have successfully stopped mold, fungus and a crumbling plaster condition with Thompson's Water Seal," reports Dye Press of the J & D Press Company, waterproofing experts.

Outer concrete walls were becoming pitted; inside walls and ceilings were moldy; fungus has formed and paper was peeling from interior surfaces; plaster was crumbling, and paint was peeling. "Two penetrations on the sides and rear wall of Water Seal were applied, two years ago," Press said. Since that time there has been no further trouble despite heavy rains and bad weather conditions. Thompson's Water Seal is manufactured by By-Chemical Products Company, San Francisco, with manufacturing plant in King City.

NEWS & COMMENT ON ART

(From Page 10)

Walter Heil, has announced the following schedule of exhibitions and events for October:

EXHIBITIONS: Contemporary Religious Art by California Artists, comprising subjects in Architecture, Painting, Sculpture, Metal Craft, Textiles and Mosaics; Society of Western Artists 13th Annual Exhibition, includes Oils, Watercolors and Sculpture; The Art of Tony Duquette—Painting, Theatre,

Decor and Jewelry; Oils, Watercolors, Drawings and Enchings of Leonard Edmondson; and photographs of Italy by John Bertolino.

EVENTS: Classes in Art Enjoyment for adults (Saturday mornings and Wednesday afternoons) and the Painting Workshop (adults) Thursday and Saturday afternoons. Children's classes in elementary art, Form in Art and Nature and Picture Making are held Thursday afternoons, Friday afternoons and Saturday mornings.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, has arranged the following calendar of events for October:

EXHIBITIONS: American Vanguard for Paris; 16th Annual Watercolor Exhibition of the San Francisco Art Association; Rental Gallery; Standards of Illustration in Children's Books; Drawings of Korea, by Roger Stringham; French Prints from the Permanent and Loan Collections; Recent Works by Bay Region Artists; Watercolors from Permanent and Loan Collections; Everyone Can Dance—prepared by the Museum in collaboration with the Halprin-Lathrop Dance Studio; Photographs by Cedric Wright; and Photographs by Brett and Edward Weston.

SPECIAL EVENTS: Three concerts by Alice Ehlers, Harpsichordist, and Alex Murray, Violinist, in works of Bach and Mozart will be presented—October 22, 29 and November 5th at 8:20 p.m. Sunday lectures will be given at 3 p.m., and another series of lectures will be given Wednesday's at 8 p.m.

Allon Schoener will present two lectures, October 20 and 27 at 8 p.m. on The Crafts and 20th Century Art and Life, and The Art of Pottery.

Classes in art include Art for the Layman—Tuesday mornings at 10; Sketch Club, Friday evenings at 7:30; Painting Classes, Friday evenings at 7:30; and Children's Class each Saturday morning at 10 o'clock.

CITY OF PARIS

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, presents a group exhibition of Paintings and Sculpture by Fifty-five Artists of the Rotunda Circle during October.

There is a wide variety of objects covered in the exhibition.

AGAINST PUBLIC HOUSING—Voters in Columbia, Mo.; Akron, Ohio; and Cleburne, Texas, recently turned down public housing by about two to one. The Toledo, Ohio, City Council repealed an ordinance authorizing public housing there.

BOOK REVIEWS PAMPHLETS AND CATALOGUES

LABORATORY DESIGN FOR HANDLING RADIOACTIVE MATERIALS—Proceedings. Building Research Advisory Board. 2101 Constitution Ave., Washington, D. C. Price \$4.50.

Is a symposium, conducted by the Building Research Advisory Board and sponsored jointly by The American Institute of Architects and the Atomic Energy Commission, and released by the AEC.

The report contains a number of photographs, graphs, and charts and is divided into 5 major subjects: 1) Architectural Introduction to Radiochemical Laboratory Layout, 2) Air Supply and Exhaust in Laboratories Handling Radioactive Materials, 3) Control and Shielding of Isotopes in Radioactive Laboratories, 4) Surfaces and Finishes for Radioactive Laboratories, and 5) Disposal of Radioactive Wastes.

The growing use of radioisotopes in industry, agriculture, and medicine is giving this subject widespread importance among architects, engineers, and manufacturers.

RICHEY'S REFERENCE HANDBOOK—For Builders, Architects, and Construction Engineers. By H. G. Richey, 1328 N. Rendon St., New Orleans, La. Price \$10.00.

The author, District Engineer (Retired) Construction of Public Buildings, U. S. Treasury Department, has had sixty years experience in the construction industry including artisan, contractor and builder, and architect. Thirty-eight years were spent in Government service as superintendent of construction, construction engineer, and district engineer supervising the construction of Federal public buildings, and other works.

The book offers an everyday reference for architects, Engineers, Builders, Building Inspectors, and students; contains a vast amount of information on actual construction problems.

Contains 1385 pages, numerous tables, diagrams and illustrations.

RULES FOR FIELD WELDING OF STEEL STORAGE TANKS. American Welding Society, 33 W. 39th St., New York. Price 50 cents.

A new, 1952 edition, which includes provisions for the use of automatic welding in the fabrication of storage tanks for storing liquids at not over 15 psi gage pressure.

The existing rules have been revised to cover the qualifications of welding procedures and welding operators for automatic welding and related requirements throughout.

Provision is also made for the use of low-hydrogen electrodes for manual arc welding. The requirements for manual welding have been reviewed and brought up to date.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

414. INDUSTRIAL INSULATIONS. Industrial Insulation Products is the subject of a new catalog published by the Baldwin-Hill Company. This illustrated catalog describes insulating materials which cover the complete temperature range from 150° F to 1800° F. Insulating cement, block, blanket, felt, and pipe covering are a few of the products shown in the catalog. Complete with thermal-conductivity graphs and heat loss charts. Brief application descriptions together with typical uses, sizes, packaging, and densities are also a part of the catalog. 20 pages, illus., 8/52.

415. INSULATING ROOF DECKS. Actual comparative costs and weight analyses of 6 roof-deck designs are found in this new booklet prepared by F. E. Schundler & Company, Inc., manufacturers of lightweight Corular Concrete Aggregates. Prepared under the supervision of Levan Seron A.I.A., this booklet should be particularly helpful when designing or considering insulating roof-decks. In addition to the six descriptive design illustrations it provides an itemized cost breakdown and comparative weight per square foot for each design. A.I.A., 4 pages, 10/52.

416. SHEATHING FOLDER. An illustrated folder on its Weather-Shield Gypsum Sheathing is being offered by Certain-teed Products Corporation. The folder points up the fire-resistant

and ageless qualities of Weather-Shield Sheeting, and lists the advantages that builders and home owners enjoy when this product is used. Typical installations shown in the folder include a gypsum sheathed home which came through a flood practically undamaged. 6/52, illus.

417. STEELTEX FLOOR LATH. A brochure covering the specifications and installation of Pittsburgh Steeltex Floor Lath is available. The brochure covers specs for floor lath over steel joists for floors and roofs, floor lath over concrete joists for floors and roofs as well as test data and safe load scales with complete computations showing how these figures were determined. Installation details are included. A.I.A., 4-E2, 12 pages illus., 7/52.

418. STAINLESS STEEL. Sharon Steel Corporation has available a new booklet that helps take much of the mystery out of the use of straight chromium type stainless steels. It includes detailed fabricating instructions, and illustrations of straight-chrome stainless gutters and downspouts in use for many years. 12 pages, illus., 8/20/52.

419. THIN SET GENUINE CLAY TILE. A brochure showing all of the advantages of MIRACLE Adhesive Products for Thin Set Genuine Clay Tile has been released. Covered in this publication are specifications, installation procedure, results, job illustrations, job details and instructions for setting tile by the Miracle Thin Set Method, for wall tile, floor tile and ceilings. The brochure is well organized for daily use. A.I.A. 23-P, 20 pages illus., 10/52.

420. HIGH PRESSURE AIR DIFFUSERS. A bulletin recently issued by the W. B. Connor Engineering Corp., illustrates and describes the company's several types of high pressure diffusers. These units are made to handle static pressures ranging from 1 to 4 inches water gauge, duct velocities up to 3,000 FPM, and 25 degree temperature differentials. Unlike conventional low pressure systems where a slight variation from designed duct pressures can cause serious changes in air delivery, high pressure systems can be balanced even where there are extremely wide variations in air delivery or changes in requirements from design of 25 to 400 per cent. Air volumes are precisely regulated from full open to completely closed positions by the unit's calibrated damper. Bull. K-29, 4 pages, illus., 10/52.

421. TROUBLE FREE SASH MAINTENANCE. Problems and suggested methods for the economical maintenance of steel and wood sash are outlined in "Trouble Free Sash Maintenance," an attractively illustrated bulletin released by the Tremco Manufacturing Company. Subjects discussed include the importance of making buildings tight and draft-free before winter; a comparison of putty and mastic glazing for windows; the value of caulking openings between sash and masonry; samples of colors in glazing compound which does not require painting; methods of painting rusted sash without removing rust; "weathering" of warped ventilators. A.I.A., 26-B-2, 4 pages illus., 3/52.

422. ARCHITECTS GUIDE FOR KENTILE. Architects, builders, flooring dealers and others who may be called upon to specify an appropriate type of resilient tile flooring for any specific installation will find much valuable information in a reference guide made available by Kentile. This publication covers in detail all uses for which each type of resilient tile is recommended and for which it is not recommended. Specific information is given for Kentile asphalt tile, Kencork cork tile, Ken-Rubber rubber tile and Special Greenproof Kentile. The guide covers right and wrong uses of Kentile products in kitchen, bathroom, bedroom, nursery, livingroom, foyer and basement room. It indicates recommended and not recommended use of resilient tile in such commercial installations as office working areas, private offices, hospital wards and corridors, schools and public buildings, libraries, stores, restaurants and factories. A.I.A., 23-D, 4 pages, illus., 8/52.

MUNICIPAL PLANNING

(From Page 19)

concrete beams along each side of the building which rest on corbels poured as part of the columns. Columns, roof beams, corbels and horizontal beams were all poured together. The effect is a rigid concrete ribbed frame. A travelling electric crane rides along rails which rest on the horizontal beams. The building has a clearance to the bottom of the concrete roof beams of 28 feet. Six 12 by 12 foot sliding doors between bays, and one 15 by 20 foot door in the end of the last bay enable the machinists to bring in any equipment operated by the system. A single-story area along one side of the structure houses small machines, lathes, work benches, grinders and other equipment and is free of the crane area.

Beardsworth has developed an attractive and elaborate landscaping plan for the site in the natural setting along the Willamette river bank. He will exploit the river-front location with suitable shrubs and growth. Parking for all of the 280 employees and customers of the growing utility will be provided on the site.

In this confined 16-acre area, the architect has attempted to project a basically sound long-range plan which will enable the utility system to expand existing buildings to meet future growth. He had also to absorb into his site plan structures already on the area and make them fit into the general and inevitable expansion of the future.

Structural engineers on the shop building were Cornell, Holland, Hayes and Merryfield of Corvallis; Electrical engineer was J. F. Whitney, Eugene; the general contractor was Wayne Shields of Eugene.

Traffic to and from various buildings was a problem. Customer traffic into the site has been engineered so that it will not interfere with service and repair trucks and equipment approaching or leaving warehouse, shops, office building, steam plant or other operating units on the site. The problem was to make this as near a self-sufficient utility operating system headquarters as modern engineering and planning could create.

ESTIMATOR'S GUIDE

BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight cartage, at least, must be added in figuring country work.

BONDS—Performance or Performance plus Labor and Material Bond(s), \$10 per \$1000 on contract price. Labor & Material Bond(s) only, \$5.00 per \$1000 on contract price.

BRICKWORK—MASONRY—

Common Brick—Per 1 M laid—\$150.00 up (according to class of work).
Face Brick—Per 1 M laid—\$200.00 and up (according to class of work).
Brick Steps—\$3.00 and up.
Common Brick Veneer on Frame Bldgs.—Approx. \$1.20 and up (according to class of work).
Face Brick Veneer on Frame Bldgs.—Approx. \$2.00 and up (according to class of work).
Common Brick—\$35.00 per M—truckload lots, delivered.
Face Brick—\$81.00 to \$106.00 per M, truckload lots, delivered.

Glazed Structural Units—

Clear Glazed—
2 x 6 x 12 Furring \$1.60 per sq. ft.
4 x 6 x 12 Partition 2.25 per sq. ft.
4 x 6 x 12 Double Faced Partition 3.00 per sq. ft.
For clear glazed plate add 30 per sq. ft.
Mantel Fire Brick \$150.00 per M—F.O.B. Firms—burgh.

Fire Brick—Per M—\$111.00 to \$147.00.

Facing—Approx. \$10.00 per M.
Paving—\$75.00.

Building Tile—
8x5x12-inches, per M \$139.50
6x5x12-inches, per M 105.00
4x5x12-inches, per M 84.00

Hollow Tile—
12x12x2-inches, per M \$146.75
12x12x3-inches, per M 156.85
12x12x4-inches, per M 177.10
12x12x6-inches, per M 235.30
F.O.B. Plant

BUILDING PAPER & FELTS

1 ply per 1000 ft. roll \$5.30
2 ply per 1000 ft. roll 7.90
3 ply per 1000 ft. roll 9.70
Brownkraft, Standard 500 ft. roll 6.85
Stalcraft, reinforced, 500 ft. roll 8.50

Sheathing Papers—
Asphalt sheathing, 15-lb. roll \$2.70
30-lb. roll 3.70
Dampcourse, 216-ft. roll 2.95
Blue Plasterboard, 60-lb. roll 5.10

Felt Papers—
Deadening felt, 3/4-lb., 50-ft. roll \$4.30
Deadening felt, 1-lb. 5.05
Asphalt roofing, 15-lbs. 2.70
Asphalt roofing, 30-lbs. 3.70

Roofing Papers—
Standard Grade, 108-ft. roll, Light \$2.50
Smooth Surface, Medium 3.40
M. S. Extra Heavy 3.95

BUILDING HARDWARE—

Shed cord com. No. 7 \$2.65 per 100 ft.
Shed cord com. No. 8 3.80 per 100 ft.
Shed cord spot No. 7 3.65 per 100 ft.
Shed cord spot No. 8 3.35 per 100 ft.
Shed rope, cast iron, \$100.00 ton
1-ton lots, per 100 lbs. \$3.75
Less than 1-ton lots, per 100 lbs. \$4.75
Nails, per keg, base \$12.55
8-in. cut nails 12.45
Rim Knob lock sets 1.80
Butts, dull brass plated on steel, 3/4x3/476

CONCRETE AGGREGATES—

The following prices net to Contractors unless otherwise shown. Carload lots only.

	Bunker per ton	Del'd per ton
Gravel, all sizes	\$2.44	\$2.90
Top Sand	2.38	3.13
Concrete Mix	2.38	3.06
Crushed Rock, 1/4" to 3/4"	2.38	2.90
Crushed Rock, 1/2" to 1 1/2"	2.38	2.90
Roofing Gravel	2.81	2.90
River Sand	2.50	3.00
Sand—		
Lapis (Nos. 2 & 4)	3.56	3.94
Olympic (Nos. 1 & 2)	3.56	3.88

Cement—
Common (all brands, paper sacks), carload lots, \$3.55 per bbl. f.o.b. car; delivered \$3.60.
Per Sack, small quantity (paper) \$1.05
Carload lots, in bulk per bbl. 3.55
Cash discount on carload lots, 10c a bbl., 10th Prox., less than carload lots \$4.00 per bbl. f.o.b. warehouse or delivered.
Cash discount 2% on L.C.I.

Trinity White } 1 to 100 sacks, \$3.50 sack
Meduse White } warehouse or del.; \$9.50 bbl. carload lots.

CONCRETE READY-MIX—

1-2-4 mix, to 10 yards*	\$12.00
10 to 100' yards	11.00
100 to 500' yards	10.50
Over 500' yards	10.30
Curing Compound, clear, drums, per gal.	1.03

* Delivered to site.

CONCRETE BLOCKS—

	Hay-dite	Basalt
4x8x16-inches, each	\$.19	\$.19
6x8x16-inches, each	.23	.235
8x8x16-inches, each	.27	.27
12x8x16-inches, each	.38	.40
12x16x24-inches, each	—	.60

Haydite Aggregates—
3/4-inch to 1/2-inch, per cu. yd \$7.75
3/8-inch to 3/4-inch, per cu. yd 7.75
No. 8 to 0-inch, per cu. yd 7.75

DAMP-PROOFING and Waterproofing—

Two-coat work, \$9.00 per square.
Membrane waterproofing—4 layers of saturated felt, \$10.00 per square.

Hot coating work, \$5.00 per square.
Meduse Waterproofing, \$3.50 per lb. San Francisco Warehouse.

Tricoisel concrete waterproofing, 60c a cubic yd. and up.

ELECTRIC WIRING—\$15 to \$20 per outlet for conduit work (including switches).

Knob and tube average \$6.00 per outlet.

ELEVATORS—

Prices very according to capacity, speed and type. Consult elevator companies. Average cost of installing a slow speed automatic passenger elevator in small four story apartment building including entrance doors, about \$9,500.00.

EXCAVATION—

Sand, \$1.00: clay or shale, \$1.50 per yard
Trucks, \$30 to \$45 per day.

Above figures are an average without water. Steam shovel work in large quantities; less: hard material, such as rock will run considerably more.

FIRE ESCAPES—

Ten-foot galvanized iron balcony, with stairs, \$250 installed on new buildings; \$300 on old buildings.

FLOORS—

Asphalt Tile, 1/8 in. gage 18c to 35c per sq. ft.

Composition Floors, such as Magnesite 40c-1.25 per sq. ft.

Linoleum, standard gage, sq. yd. \$2.75

Mastipave—\$1.50 per sq. yd.

Battleship Linoleum—1/8"—\$3.00 sq. yd.

Terrazo Floors—\$2.00 per sq. ft.

Terrazo Steps—\$2.50 per lin. ft.

Mastic Wear Coat—according to type—20c to 35c.

Hardwood Flooring—

Oak Floor, g—T & G—Unfin.

	Clear Old, White	1 1/2" x 1/2" x 1/2"	3/4" x 1/2" x 1/2"	3/4" x 1/2" x 1/2"
Clear Old, Red	405	380	350	311
Select Old, Red or White	355	340	311	280
Clear Pln., Red or White	355	340	311	280
Select Pln., Red or White	340	330	311	280
#1 Common, Red or White	315	310	305	280
#2 Common, Red or White	305	305	305	280

Refinished Oak Flooring—

	Prime	Standard
1/2" x 2"	\$369.00	\$359.00
3/4" x 2"	380.00	370.00
1" x 2"	390.00	381.00
1 1/4" x 2"	375.00	355.00
1 1/2" x 2"	375.00	375.00
1 3/4" x 2"	415.00	415.00

Unfinished Maple Flooring—

	Prime	Standard
1 1/4" x 2 1/4" First Grade	\$390.00	
1 1/4" x 2 1/4" 2nd Grade	365.00	
1 1/4" x 2 1/4" 2nd & 3rd Grade	375.00	
1 1/4" x 2 1/4" 3rd Grade	240.00	
1 1/4" x 3 1/4" 3rd & 4th Jld. EM	380.00	
1 1/4" x 3 1/4" 2nd & 3rd Jld. EM	390.00	
1 1/4" x 3 1/4" 1st Grade	400.00	
1 1/4" x 3 1/4" 2nd Grade	350.00	
1 1/4" x 3 1/4" 3rd Grade	320.00	

Floor Layer Wage \$2.60 hr.

GLASS—

Single Strength Window Glass	\$.30 per sq. ft.
Double Strength Window Glass	.45 per sq. ft.
Plate Glass, 1/4" polished to 75	1.60 per sq. ft.
75 to 100	1.74 per sq. ft.
1/4 in. Polished Wire Plate Glass	2.50 per sq. ft.
1/4 in. Rgh. Wire Glass	.80 per sq. ft.
1/8 in. Obscure Glass	.44 per sq. ft.
3/16 in. Obscure Glass	.63 per sq. ft.
1/2 in. Heat Absorbing Obscure	.72 per sq. ft.
3/4 in. Heat Absorbing Wire	.44 per sq. ft.
1 in. Ribbed	.63 per sq. ft.
1 1/8 in. Rough	.44 per sq. ft.
1 1/2 in. Rough	.63 per sq. ft.
Glazing of above additional	\$.15 to .30 per sq. ft.
Glass Blocks, set in place	3.50 per sq. ft.

HEATING—

Average, \$3.50 to \$4.00 per sq. ft. of radiation, according to conditions.

Warm air (gravity) average \$64 per register.

Forced air average \$91 per register.

INSULATION AND WALLBOARD—

Rockwool Insulation—	
(2") Less than 1,000 sq. ft.	\$64.00
(2") Over 1,000 sq. ft.	59.00
Cotton Insulation—Full thickness.	
(3 1/2")	\$95.50 per M sq. ft.
Sisalation Aluminum Insulation—Aluminum	
coated on both sides	\$73.50 per M sq. ft.
Tileboard—1/2" panel	\$9.00 per panel
Wallboard—1/2" thickness	\$55.00 per M sq. ft.
Finished Plank	\$69.00 per M sq. ft.
Ceiling Tileboard	\$69.00 per M sq. ft.

IRON—Cost of ornamental iron, cast iron, etc., depends on designs.

LUMBER—

S4S No. 2 and better common	
O.P. or D.F. per M. f.b.m.	\$100.00
Rough, No. 2 common O.P. or	
D.F. per M. f.b.m.	95.00

Flooring—

	Per M Delvd.
V.G. D.F. 8 & Btr. 1 x 4 T & G Flooring	\$225.00
"C" and better—all	225.00
"D" and better—all	225.00
Rwd. Rustic—A grade, medium dry	185.00
8 to 24 ft.	
Plywood, per M sq. ft.	
1/4-in., 4,000 S.F.S.	\$135.00
1/2-in., 4,000 S.F.S.	219.00
3/4-in., per M sq. ft.	292.00
Plywood	11 1/2¢ per ft.
Phylorm	25¢ per ft.

Shingles (Rwd. not available)—	
Red Cedar No. 1—\$9.50 per square; No. 2, \$7.00;	
No. 3, \$5.00.	
Average cost to lay shingles, \$6.00 per square.	
Cedar Shakes—1/2" to 3/4" x 24/28 in. hand split	
lapped on split resawn, per square	\$15.25
3/4" to 1 1/4" x 24/28 in. split resawn,	
per square	17.00
Average cost to lay shakes, 8.00 per square	
Pressure Treated Lumber—	
Wolmanized	Add \$35 per M to above
Croseted,	
8-lb. treatment	Add \$45 per M to above

MARBLE—(See Dealers)

METAL LATH EXPANDED—

Standard Diamond, 3/40, Copper	
Bearing, L.C.L. per 100 sq. yds.	\$43.50
Standard Ribbed, ditto	\$47.50

MILLWORK—Standard.

D. F. \$150 per 1000, R. W. Rustic \$175	
per 1000 (delivered).	
Double hung box window frames, average	
with trim, \$12.50 and up, each.	
Complete door unit, \$15 to \$25.	
Screen doors, \$8.00 to \$12.00 each.	
Patent screen windows, \$1.25 a sq. ft.	
Cases for kitchen pantries seven ft. high,	
per lineal ft., upper \$9.00 to \$11.00;	
lower \$12.00 to \$13.00.	
Dining room cases, \$20.00 per lineal foot.	
Rough and finish about \$1.00 per sq. ft.	
Labor—Rough carpentry, warehouse heavy	
framing (average), \$75.00 per M.	
For smaller work average, \$85.00 to \$100.	
per 1000.	

PAINTING—

Two-coat work	per yard 85¢
Three-coat work	per yard \$1.10
Cold water painting	per yard 25¢
Whitewashing	per yard 15¢
Unsteed Oil, Strictly Pure	Wholesale
(Basis 7 1/2 lbs. per gal.)	Raw Bottled
Light iron drums	per gal. \$2.28 \$2.34

Cost depends on design and quality required.

ARCHITECT AND ENGINEER ESTIMATOR'S DIRECTORY

Building and Construction Materials

EXPLANATION—Building and construction materials are shown in major classified groups for general identification purposes with names and addresses of suppliers of materials listed in detail under group classification where name first appears—main offices are shown first with branch or district offices following. The numeral appearing in listings *(3) refers to the major group classification where complete data on the dealer, or representative, may be found.

ADHESIVES (1)

Wall and Floor Tile Adhesives
THE CAMBRIDGE TILE MFG. CO. *(135)

AIR CONDITIONING (2)

Air Conditioning & Cooling
UTILITY APPLIANCE CORP.
Los Angeles 58: 4851 S. Alameda St.
San Francisco: 1355 Market St., UN 1-4908

ARCHITECTURAL VENEER (3)

Ceramic Veneer
GLADDING, McBEAN & CO.
San Francisco: Harrison at 9th St., UN 1-7400
Los Angeles: 2901 Los Feliz Blvd., OL 2121
Portland: 110 S.E. Main St., EA 6179

CROCKER BANK

(From Page 27)

country with deposits of \$97,000,000.

The Farmers and Merchants Savings Bank of Oakland was founded in 1892, and continued to be owned by the same interests until the consolidation with Crocker First National Bank in 1947. Assets of the bank today are in excess of \$400,000,000.

Both Wm. W. Crocker, chairman of the Board of Directors, and James K. Moffitt, chairman of the Executive Committee, are descendants of the founders of the parent institutions of the Crocker First National Bank.

Crocker succeeded his father, the late Wm. H. Crocker, as president in 1936, and was elected chairman of the Board in 1950. Moffitt is the son of James Moffitt, one of the founders of the First National Bank of San Francisco, California's oldest national bank, and one of the parent institutions of Crocker First National Bank.

J. F. Sullivan, Jr., who became president of the bank in 1950, is the son of Jeremiah F. Sullivan, famous San Francisco jurist.

ENGINEER MOVES OFFICE

Harold B. Hammill, Consulting Civil Engineer, has announced the removal of offices from 381 Bush Street, San Francisco, to 417 Market Street, same city.

**Built-in telephone facilities
mean happier clients for you**

That's why so many building plans today include built-in telephone facilities. Clients like the idea of having conduit for concealed telephone wiring, and extra telephone outlets conveniently located to take care of future telephone installations and changes. Modern homes are hardly complete without the low-in-cost, high-in-satisfaction advantages of planned telephone facilities.

Just call Pacific Telephone's free Architects and Builders service. They'll be glad to help you plan telephone facilities for better living tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

IN THE NEWS

TUCSON AIRPORT PROJECT APPROVED BY COUNCIL

The Tucson City Council has approved a contract with Blanton & Coles, Tucson architects, for engineering work for a \$132,000 runway rehabilitation project at the municipal airport at a fee of approximately seven per cent of the project cost.

PRESBYTERIAN CHURCH PLANNED FOR COLUSA

Preliminary drawings have been completed by architect Chas. F. Dean of Sacramento, for the construction of a new Presbyterian Church in the City of Colusa.

Estimated cost of the project is \$100,000.

NAMED CHIEF ENGINEER

Julius I. Delattre has been named Chief Engineer for the Virginia Metal Products Corp., of Orange, Virginia, according to an announcement by J. A. Patrick, president.

Delattre will supervise all engineering operations, and succeeds Chas. H. Gersley who becomes Plant Engineer.

SMALL HOMES COUNCIL OFFERS BUILDING AID

The University of Illinois Small Homes Council has just released two interesting instruction sheets covering the construction of the "W" roof truss and a closet-wall in residential construction.

The instruction sheet for the "W" truss, having a span 20'-8" to 32'-8", includes cutting diagrams, nailing schedule, design

of data and a series of 23 sketches on how to build the truss.

The closet-wall instruction sheet shows basic closet units and their construction from thin wall panels of laminated hardboard and gypsum board. Copies of the material are available direct from the University.

ROY MATTOCK SAN FRANCISCO BUILDING EXCHANGE DIRECTOR

Roy Mattock, San Francisco and Peninsula general contractor, has been appointed a director of the San Francisco Builders' Exchange, succeeding Herbert Lemont.

Mattock is head of the Mattock Construction Company, San Francisco.

YOLO COUNTY HOSPITAL PLANNED FOR WOODLAND

The board of supervisors of Yolo county has authorized architect W. D. Peugh, AIA, of San Francisco, to draft plans and specifications for the construction of a new 120-bed addition to the Yolo county hospital in Woodland.

The new construction will include a clinic area; four psychiatric rooms; boiler room, and a kitchen, and will cost approximately \$500,000.

OFFERS COURSES IN CONCRETE

The University of California extension's division of engineering, Los Angeles, has added three courses dealing with concrete construction to its roster of fall classes, starting September 9th.

Robert Field, Jr., of the architectural firm of Austin, Field & Fry, will conduct a course in architectural concrete, and during six weekly meetings will have as guest

lecturers Ernest H. Lee, structural engineer; Kenneth Anderson, superintendent, James L. Barnes Construction Co.; and Charles D. Wailes, contractor.

A course in pre-cast concrete, and Tilt-up construction will be started October 21.

NEW TELEPHONE EXCHANGE

The Pacific Telephone & Telegraph Company are building a new telephone exchange building in Willits, California.

The building is to be of frame and stucco construction.

SANTA BARBARA UC COLLEGE

Construction on the first two permanent buildings on the new 408-acre seashore site of the Santa Barbara College of University of California has been started and according to University officials more than \$1,941,500 will be expended for the initial units.

The buildings will be two stories in height and of steel re-enforced concrete construction. They will have 85,300 sq. ft. and comprise two wings.

ILLUMINATED MAGNIFIER BY STOCKER & YALE

A new portable high intensity fluorescent fixture designed primarily for industrial inspection, and producing intense but cool glare-free illumination with high magnification, has just been announced by STOCKER & YALE, Inc. Engineers & Manufacturers of Marblehead, Mass.

It is equipped with either a 2 or 4 power lens of 2" x 4" dimensions. The lens holder is hinged, offering complete versatility of use, with or without lens. Has either heavy portable cast base, or base for mounting on machine or bench. Available immediately through Electrical Wholesalers and Specialty Dealers.

ARCHITECTS SELECTED

The Board of Supervisors of Tulare county have selected the architectural firm of Horn & Morland of Fresno, to draft plans for a new County Court House building to be built in Visalia, California.

CONSTRUCTION VOLUME REMAINS LARGE

Despite record levels of construction activity in recent years and a strong likelihood that the 1952 volume of the industry will establish yet a new high, there is still a tremendous backlog of needed construction. H. E. Foreman, managing director of The Associated General Contractors of America, reported at the mid-year meeting of the governing and advisory boards of the association in West Virginia recently.

While in various parts of the country construction activity has fallen off substan-

tially, a number of areas are yet to be jolted by the impact of gigantic defense projects which will drain much of the surrounding manpower and materials.

LOS ANGELES HOME SHOW SETS RECORD

The recent 7th Annual Los Angeles Home Show, held in Hollywood Park, established a new national attendance record for such events, and was responsible for several million dollars worth of business, according to a report by Carl F. Kraatz.

More than 191,150 persons visited the Exposition during its 11-day run.

NEW MEDICAL CENTER IN EL PASO PLANNED

Architects Pereira & Luckman of Los Angeles are designing a new \$1,000,000 medical center to be built on the outskirts of El Paso, Texas.

It will provide professional headquarters for seventy-five doctors and dentists and will comprise ten 1-story buildings located on a 22-acre site.

The buildings will be grouped around a central landscaped mall, with ample provision for parking.

FEED MILL AND WAREHOUSE

The Sperry Division of General Mills, has purchased a Feed Mill and Warehouse site near Stockton and will soon commence construction of a new \$1,000,000 plant, according to an announcement by company executives.

ADDITION TO HOSPITAL

The architectural firm of Stone & Mulloy and S. P. Matracchini, Associates, San Francisco, is designing a 98-bed addition for the Sequoia Hospital in Redwood City.

Construction will consist of a 3-story, reinforced concrete, wing addition, estimated to cost \$985,000.

TIN COOPERATIVE CHANGES NAME

The International Tin Research and Development Council recently announced that the name of the organization had been changed and would be known in the future as the International Tin Research Council.

The change in name will not affect the policy of the Council or alter its present activities.

NEW UNIT MT. SINAI HOSPITAL PLANNED

The first unit of the new Mt. Sinai Hospital, to be constructed on Beverly Blvd., Los Angeles, will comprise a contemporary structure containing 180 beds. The site is a 3½ acre one donated by the Levine Foundation.

The entire unit of the new Mt. Sinai Hospital has been designed by Welton Becket & Associates, architects and engineers, and Palmer, Krisel & Lindsay, associated architects and engineers.

LOW RENT HOUSING PROJECT FOR FRESNO

The Housing Authority for the City of Fresno is planning a 150-dwelling, low rent, project to be built in the City of Fresno.

Architects Robert W. Stevens, and Benjamin F. Lippold of Fresno have been commissioned by the housing authority to draw plans and specifications for a frame and stucco structure with plywood interior, insulation, and rigid asbestos shingle roofs.

add customer appeal...

to any commercial building with new colors in real clay

Suntile

MARBLE TAN 563

FAWN 561

Good looks and good taste are important to stores, office buildings, restaurants—in fact, to *any* commercial building.

With the new Suntile color line, you can help assure business success by colors that fit the function of the building and create an attractive, *inviting* appearance.

These Suntile colors are functional. They are softly shaded—scientifically developed to aid lighting, improve employee morale, cut down accidents, as well as give added eye appeal.

Because Suntile is *real clay* tile, repair and maintenance are kept at a minimum and sanitation and cleanliness are easily achieved with soap and water. These are the traditional advantages

of real clay tile that bring about great long-run economy. With Suntile, first cost is usually last cost.

NEW COLOR BOOKLET. The new Suntile color line is described in our booklet "Suntile Functional Color Recommendations." This will help you select color for industrial, commercial and institutional buildings on a scientific basis. For your free copy, see your nearest Authorized Suntile Dealer, or write us direct, Dept. AE-11, The Cambridge Tile Mfg. Co., P.O. Box 71, Cincinnati 15, Ohio.

Suntile MARBLE TAN AND FAWN

Warm colors of unlimited use

Suntile Marble Tan and Fawn are new tones in real clay tile. They are warm colors with a soft grayish tint and slightly deeper reflectance than many of the more conventional tile colors. These are "high style" colors that give soft beauty, good taste and neutrality of background to building interiors. They are easy on the eyes and flattering to furniture or fixtures. They will stand high light intensity without appearing gaudy or distracting. Marble Tan and Fawn were selected by Faber Birren, noted color authority, and developed by The Cambridge Tile Mfg. Co. as part of our new color line.

COVER PICTURE

FOLEY'S DEPARTMENT STORE
Houston, Texas

KENNETH FRANZHEIM, Architect

One of the newest and most modern store buildings to be built in the Southwest recently is the beautiful Foley's Department Store of Houston, Texas.

The outer appearance of this limestone structure has a clean, warm beauty of its own with the textural quality of the stone keeping the solid walls from appearing monotonous.

Interior design is of the most modern with the architect utilizing many new building materials to accomplish both customer appeal and occupancy utility.

Yallop, Manager. Telephone DUoglas 2-8311.

EDITORIAL NOTES

LANDOWNER EXTRAORDINARY

The feudal lords of the Middle Ages had nothing on Uncle Sam. He now owns 24 per cent of all the land in the United States, and is adding to his holdings by leaps and bounds.

The recent announcement of plans by the Federal Government to build an enormous atomic energy plant in Ohio prompted the Chamber of Commerce of the United States to look into Uncle Sam's real estate operations.

According to the latest available figures, compiled by Congressman Russell V. Mack (R., Wash.), the Federal land empire totals 455,146,726 acres, or 711,166 square miles. That is more land than there is in Japan, Italy, France, Germany, Belgium, The Netherlands, Switzerland, and Portugal put together.

The Government's holding represent an area equal to the combined area of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, Pennsylvania, Delaware, New Jersey, Maryland, and the District of Columbia.

The big catch in Uncle Sam's operations as a landowner, however, is that Uncle Sam pays no state taxes . . . like you and I. All of which means that you pay not only your share of state taxes but you must pay more to make up for what the Federal Government does not pay. And, on top of that, you also pay out extra Federal taxes to support the Federal bureaus which manage the government's land holdings.

The line forms at the Right for those who want to pay more taxes to support Uncle Sam's housing program.

HOUSING RESEARCH REVOLUTION

What research has done in medicine, chemistry, physics and scores of other sciences to raise American health and living standards may be duplicated in the still unexplored field of modern housing.

The National Association of Home Builders took the first big step toward that goal recently with the formation of a "Home Builders Research Institute" to coordinate the scattered housing research now under way and to conduct practical field tests on

new materials and techniques developed in university and industrial laboratories.

Creation of the new organization is expected to give tremendous impetus to all basic housing research and to speed up the technological revolution which has transformed home building since World War II from a handicraft to a \$12-billion a year mass-production industry.

In addition to its own studies and field trials, the Institute will provide the nation's home builders with a central clearing house of information on new developments by governmental and private research organizations. It will also advise those organizations on practical problems faced by the home builders in order to guide their research into the most effective channels.

One of the Institute's primary functions will be to serve as a liaison group between building materials manufacturers and the builders who use their products, so that new ideas which have been tried and proven in the laboratory can be given full field test in "experimental homes" all over the country.

Housing research is a relatively new science. One of the early projects in the field being a limited program undertaken by the Housing and Home Finance Agency under provisions of the Housing Act of 1948. The 1949 and subsequent Housing Acts have expanded the program to include research in the social sciences and related fields—economics, mortgage finance, urban studies and local housing regulations—as well as building technology.

* * *

The National Association of Home Builders, whose members build an estimated 80% of the new homes erected in metropolitan areas, now have a membership of 22,588 in 179 different cities.

* * *

HEY! HAY!

President Truman has asked the federal Housing and Home Finance Agency to advance the tidy sum of \$3,000,000 to the U. S. Department of Agriculture to be used for the purchase of hay for drought-stricken cattle.

We know governmental theorists are capable of strange reasoning, and, perhaps the logic of the federal Housing Agency engaging in the hay business is a throw-back to the dire situation related in the fable of the three little pig house-builders and the big bad wolf.

NEWS and COMMENT ON ART

SAN FRANCISCO WOMEN ARTISTS' HOLD 27th ANNUAL EXHIBITION

The 27th Annual Exhibition of the San Francisco Women Artists opened to the public on Friday, November 14th, at the San Francisco Museum of Art.

Awards will be made to thirteen artists in categories of Painting, Sculpture, Decorative and Industrial Arts, and Photography.

The exhibition will continue through December 7.

CITY OF PARIS

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, presented its annual International Orchid Show during November to a large audience. It was the second showing of this event and will undoubtedly be repeated again next year.

Exhibited during November was an unusual Cultured Pearl Exhibit, and a group of Portraits by Serge Ivanoff.

The Artists' Fair, featuring Christmas, is also being shown.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum in Golden Gate Park, San Francisco, under the direction of Walter Heil, scheduled a number of outstanding exhibitions and events during November.

Among Exhibitions was the 13th Annual Exhibit of the Society of Western Artists, featuring Oils and Watercolors; an Exhibit of Architecture, Paintings, Sculpture, Metal Craft, Textiles and Mosaics on Contemporary Religious Art by a number of California artists; and the 32nd Annual Exhibition of the California Watercolor Society.

In the special events department, classes in art for adults and children featured the month's activities. Classes for adults are conducted on Thursday and Saturday afternoon, while classes for children are scheduled each Thursday and Friday afternoon and Saturday morning.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, offers the following exhibitions and events for November:

EXHIBITIONS. Thirty U. S. Contemporaries, paintings for Japan (This is an American Federation of Arts Exhibition); Six Canadian Painters; San Francisco Women Artists; Photographs by Minor

White; Photographs by Cedric Wright; Recent Works of Bay Region Artists; Watercolors from Permanent and Loan Collections; Photographs by Brett and Edward Weston; Modernized Masters; and Latin American Paintings.

EVENTS: Include Concerts, "Art in Your Life" — television series; special lectures; and a number of Museum services. Adventures in Drawing and Painting, for adults; and Children's Saturday Morning Art Classes continue during November.

ANDRE GIRARD SKETCHES PRESENTED TO STANFORD

Andre Girard, noted French painter, has presented a set of fourteen pen and ink sketches to the Stanford University Library.

The sketches, depicting scenes of Christ's sentence, crucifixion, and burial, were the preliminary work for 2 x 7 ft. oil paintings which Girard executed on the walls of St. Ann's, the Newman Club chapel in Palo Alto. They are approximately one-half the size of the finished work.

The exhibit is entitled "The Way of the Cross".

ANNUAL SOCIETY OF WESTERN ARTISTS

Awards in the annual Society of Western Artists exhibit at the M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, were made to the following:

The \$250.00 Anna Elizabeth Klumpke Memorial award was given to Paul Sarkisian for his "Sublime".

Oil Painting awards included Carolus Verhaeren — "Drifting", and Claude Buck — "Adventure's End". Receiving honorable mention were Earl Thollander, Ann K. Pennington, and Mary Miller.

Water Color awards were presented to Donald Teague — "Cockney and Rubble", Don F. Osterloh — "Tug's Approach", and Nat Levy — "Saved from the Grave". Honorable mention was given Ted Kline, Maurice Logan, and Rene Weaver.

ELECTED CHAIRMAN OF NORTHWEST ART GROUP

Priscilla Colt, Research and Program Assistant of the Portland Art Museum has been chosen Chairman of the Northwest Division of the American Society of Aesthetics.

Other members of the Executive Committee include, George N. Belknap, editor, University of Oregon; Prof. Paul J. Jackson, Whitman College; Sherman Lee, Curator of Oriental Art at the Cleveland Art Museum. The next annual meeting has been scheduled for May 1953 and will be held at the Portland Art Museum, Portland, Oregon.

JOINT INFORMATION COMMITTEE

AMERICAN INSTITUTE OF ARCHITECTS and THE PRODUCERS COUNCIL, INC.

Originally the plan before the JOINT INFORMATION COMMITTEE of the A.I.A. and the PRODUCER'S COUNCIL for a CARD FILE SPECIFICATION SERVICE was to have been completed and put under way at the Washington, D. C. meeting of October 16-17. Enthusiasm has been generated on this constructive program both within the A.I.A. and the SPECIFICATION INSTITUTE as well as the PRODUCER'S COUNCIL. The committee was to go over a breakdown on the promotion pieces to be mailed to the Architects nationwide and the dummy cards plus a finished brochure for use in promoting the CARD FILE SPECIFICATION SERVICE.

The support behind this movement to improve the working aids available to the Architect was so sound that Cy Silling, A.I.A., has donated from his own funds \$1500 to further the plan. Up to this point the original plan had encompassed the idea of providing a specification card service of predetermined shape and size which would be edited jointly by the A.I.A. and the SPECIFICATIONS INSTITUTE. These first cards were to include roughly 200 cards of specification in the various classifications which would be sponsored on invitation by both manufacturers and materials association. The specs of each of this type would be incorporated in the first bulk of the service for which the individual Architect would pay \$10.00 each year.

At the October 16 meeting however a problem was found which seriously hampers speedy development of this service. Since there are approximately 41 divisions of the original A.I.A. Specifications system and many subdivisions under each one it was proposed that this be completed at the same time.

Immediately it was pointed out by Tyler S. Rogers, PRODUCER'S COUNCIL, that this would entail a tremendous amount of time and labor as well as cost. The committee discussed this new

problem which appeared to present such a formidable question with estimates for individual specifications under the A.I.A. as re-written taking as long as 2 weeks for each one. At that rate it was easy to see that the program would never get under way simply because it would still be in the works within the life span of all those present. Or since this is obviously an exaggeration probably 2 or 3 years.

As a result of this discussion a sub-committee was formed to study this particular phase of the CARD FILE SPECIFICATION SERVICE problem. This committee is composed of Mr. Ebert, A.I.A. SPECIFICATION INSTITUTE, Mr. Tyler S. Rogers, PRODUCER'S COUNCIL and Mr. Walter Taylor, A.I.A., who will meet again on November 20 to discuss their findings towards a solution.

At this point we think that each individual Architect can help with some possible contribution of thought towards solving this problem by forwarding his opinion to the nearest Chapter headquarters or to the National Headquarters of the A.I.A. In looking at the whole as objectively as possible at this time we would like to suggest that "Rome was not built in a day," to steal a cliché, but that here is a case where reconsideration is in order. It seems entirely possible that somewhere along the line things have become transposed and the mouse is laboring to give birth to a mountain.

If the approach was made that this section of the A.I.A. specification section of the CARD FILE SPECIFICATION SERVICE was broken up into fourths with one fourth to be completed each year for the next four years it might reduce the size of the problem to workable proportions. Then it would be possible to set up a base revision policy set on the same four year cycle so that each fourth would be reviewed each 4 years and so keep all files current to building specification needs within any 4 year period. That is a layman's contribution; we are sure the Architect can do better.

NOTE: This news space is being contributed by ARCHITECT & ENGINEER Magazine to the JOINT INFORMATION COMMITTEE representing the Northern California Chapter of The American Institute of Architects and the Northern California Chapter of the Producer's Council, Inc., and is available to this Committee for the purpose of bringing to the attention of leaders within the Construction Industry various phases of the Architectural profession and building materials industry procedures for general consideration and comment. Your "ideas" and any suggestions for the better pooling of thoughts along these lines should be sent to "Joint Information Committee, c/o The Architect & Engineer, 68 Post Street, San Francisco," where they will be immediately forwarded to proper committee members.

A STAINED GLASS CRAFTSMAN

HORACE T. JUDSON

LOOKS AT THE 20th CENTURY

Since the middle ages stained glass windows have been a source of inspiration to the worshiper in the church or temple of his choice. Before printing made the Bible available to everyone, people could read its messages in the stained glass of great cathedrals and parish churches. These windows were called "Biblia pauperum" or books of the poor. In this connection it is interesting to note the renewed stress being given to visual education by our educators throughout the world during the 20th century.

The inspiration of the current spiritual Renaissance in religion so obvious throughout the United States is a challenge to the creative ability of contemporary craftsmen. It is their prayer that their ability may reflect the great magnitude of God's inspiration for it is the basis of their creed that spiritual inspiration is truly the composer, artist and author of immortal music, art and literature. They believe that the spiritual renaissance of the American people is lifting us to a new and higher culture.

**Henry Steinbomer,
Architect**

It has been said that the art of making stained glass windows is a lost art. This is not true. There are studios in the United States currently creating masterpieces in this medium of expression. Outstanding among them is The Judson Studios of Los Angeles, California. Three generations of the Judson family have created stained glass windows for churches throughout the United States—windows which further the glorification and spiritual atmosphere of their houses of worship. There are eighteen artists and master craftsmen in The Judson organization designing and fabricating stained glass windows on a nationwide basis. About 85% of these commissions are for churches of all denominations. Others are mausoleums, libraries, homes and various institutions.

Continuous study and research is necessary for a stained glass designer to understand and reflect

in design and color the creeds of the many denominations interested in the use of stained glass. As liturgical art is most exacting, it is necessary to have and refer to many translations of the BIBLE, biographies of saints, books on ecclesiastical heraldry and symbolism.

The men that make up the staff of a successful group of stained glass craftsmen are an unusual lot and it is interesting to most people visiting The Judson Studios for the first time to learn that each craftsman is an active working member of the church of his choice and enjoys the opportunity of expressing his faith in his daily work.

The creation of a window requires countless colors and numberless bits of jewel-like glass to say nothing of the weeks, months, years necessary to see it through to completion. For more than 20 years, The Judson Studios have been creating

memorial stained glass windows for The First Congregational Church in Los Angeles and this year will mark the completion of this assignment. Included among these windows are those depicting the "Creation" and the "Tree of Jesse", subjects seldom seen in stained glass. One of the great transept windows in this church depicts the story of the Old Testament. The window measures approximately 16' wide and 30' high. A window of this size and design has required approximately two years of work and consists of approximately 27,900 jewel-like pieces of pot metal antique hand blown glass. Each piece of glass is handled a minimum of 13 times prior to being fitted into a lead "H" shape extrusion. This will give an idea of the schedule problems encountered by the craftsmen assigned to a commission of this nature.

Much of the glass used in the creation of stained glass windows comes from Europe but there are sources of supply within the United States now that are slowly but surely surpassing the foreign market for beauty of color and texture.

Mr. Horace T. Judson has said, "Stained glass possesses an aura of mystery and romance and even the very nature of the materials and proc-

esses of glass making are conducive to mystery. Opaque substances are transformed into a completely different material. Dull sand, lead, lime and soda that go into the furnace come out glowing and vibrant jewels to be controlled by the greatest skill. The substance remains sparkling and elusive even when cajoled into its final shape."

Stained glass windows have been called "Cata-racts of color between cliffs of masonry."

The fabulous migration of Americans westward has created a challenge to the churches to meet the spiritual needs of the newcomers. In caring for the glass requirements of the new churches, the fifty-five years of stained glass experience of The Judson Studios is often put to task when confronting the varied opinions of color and design most appropriate for the architecture of the church and

the sunlight intensity of the location being discussed. In planning the control of the sunlight, the stained glass man must be keenly aware of the light intensity and atmospheric conditions of each district in question.

A most interesting development in the stained glass craft is the part psychology is playing in the selection of glass color. Mr. Judson is called upon to lecture about this subject before architectural and church groups throughout the nation and its importance is recognized by educators universally.

Pictured here are examples of several types of stained glass designs. These are original designs, as are all Judson creations, for several types of architecture — Gothic, Mediterranean, Colonial, Mission and contemporary.

NEW GENERAL OFFICES
ACME BRICK COMPANY
Fort Worth, Texas

ARCHITECTS
PRESTON M. GEREN
JOSEPH R. PELICH
W. G. CLARKSON & CO.

CONTRACTOR — JAMES T. TAYLOR & SONS, INC.

The recent formal opening of the new windowless home of the Acme Brick Company in Fort Worth, Texas, exemplified a new and interesting

era in architectural design for commercial office buildings in the Pacific Southwest.

The unusual structure, windowless, except for

the four decorative openings on the street front, was decided upon by architects Preston M. Geren, Joseph R. Pelich, and W. G. Clarkson & Company, after a careful consideration of all construction, site, and utility factors together with construction costs. It was determined that savings of \$16,000 in construction; \$12,200 in heating and air conditioning equipment; and \$6,400 in other costs could be effected by use of the windowless design.

Recurring costs will be reduced by \$800.00 a year for maintenance of windows and a saving of \$980.00 a year will be made in maintenance and

control of air conditioning equipment and air controls.

Over and above any monetary considerations are the numerous advantages to the office personnel such as the reduction of noise, elimination of distractions, and the constant control of good light conditions. This modern windowless design has been employed effectively in other cases throughout the nation, thus the architects and firm feel confident the new building will further stimulate use of and interest in this type of building.

In addition to the windowless design, the most

ACME BRICK . . .

One of many offices illustrating the unusual effect of using exposed brick for interior walls.

modern architectural and structural innovations have been built into the building. The 22,800 square feet of functionally planned, air-conditioned office space are divided into four floors with all the offices of each department located on the same floor for more efficient coordination and interoffice communication. Unusual features include an assembly room seating 100 persons and a snack bar for office personnel. A welcome accommodation is the ample parking space provided for staff and visitors.

Other noteworthy features are the various uses of brick surfaces such as the exposed brick and tile and the painted brick, the blending of the currently popular shades of pink and buff, and the employment of specially shaped brick, of which an interesting example is the moulded shape created for the unusual round columns in the entrance lobby and outside.

LOBBY ENTRANCE illustrates one of the interesting designs created by skillful masonry and moulded bricks.

MEL'S DRIVE-IN RESTAURANT

SALINAS, CALIFORNIA

ARCHITECTS

{ BUTNER; CHARLES E.
HOLM; WALLACE J.
WATERMAN; JOHN H.

GENERAL CONTRACTOR

CARLSEN and JUNCKER

This new, attractive and recently completed building is located on one of the main streets of Salinas, California, near a large and newly developed Shopping Center which has been built to

serve a group of new residences adjacent to the main highway leading to colorful and historical Monterey Peninsula. It was erected to serve the specific requirements of the Mel's Drive-In Restau-

DRIVE-IN RESTAURANT . . .

rant Company of San Francisco by Mrs. Vera Richmond, the owner.

The building has been designed by the architects to provide a number of booths and service counters for interior seating, and a quick, convenient, outdoor service for customers in parked automobiles. The attractive site is on a corner lot with a third motor vehicle exit to the street to the north.

The several entrances and exits to the grounds are arranged for a maximum of automobile parking space for those wishing "car service" and provision has also been made for adequate additional parking space for patrons who are dining inside the building.

One of the interesting features of the building is that all controls between waitresses serving the interior facilities, and the "car-hops" serving the outside parked cars, and the food dispersing area radiates from the central kitchen. This per-

mits a maximum of efficiency and minimizes service delays.

Variations between warm summer climate and cooler winter weather is solved by installation of a complete ventilating system for interior use during warm weather, and a complete heating system which assures warm, even temperatures during the winter months. Provision has been made for modern kitchen refrigeration at all times and ample deep freeze boxes are installed for handling of foods — fruits, vegetables, and meats.

The plan of the building and arrangement on the site has been worked out by the architects so that there is no cross-over of service to the outside customers in cars by the waitresses taking care of this type of trade. The interior restaurant accommodates 100 people at a time, while the Drive-In area will take care of 60 automobiles.

The building is designed with an attractive wide overhang cantilever roof that affords a desired summer and winter protection to personnel and

ATTRACTIVE INTERIOR

. . . DRIVE-IN RESTAURANT

customers desiring car service. This feature is particularly attractive for rainy weather conditions. The cantilever roof rests on steel pipe columns which offer an opportunity to place large glass windows around practically the entire restaurant. The walls are of Cal-stone and coral colored blocks

which are laid in an attractive pattern with open cells exposed to the desired texture to the walls.

Completion of the building adds another colorful commercial structure to Salinas designed to serve the immediate and adjacent areas of population.

KERN COUNTY EARTHQUAKES 1952

By **W. L. DICKEY**
Chief Civil Engineer
Bechtel Corp'n., Power Division

The July and August earthquakes left a wake of death and destruction throughout much of Kern County at the lower end of California's San Joaquin Valley. They also taught the architect and engineer some valuable lessons.

An inspection of the stricken area confirmed that current building design practices are sound and will result in earthquake resistant structures if the design is properly executed.

The following photographs will serve to illustrate building failures typical of the area.

this wall, which collapsed shortly after the picture was taken, could have been prevented by the addition of bond beams at strategic points. Here again modern standards of design and construction would have resulted in an adequate building.

FIG. 1
Seventy year old masonry of the poorest kind
in Tehachapi, California.

Fig. #1 illustrates the general behaviour of the older brick masonry in the area. This particular building is about seventy years old and represents masonry of the poorest kind. The mortar crumbled between the fingers and the interior joints were not filled. This type of construction should not be confused with modern reinforced grouted brick masonry as required by the building codes today which, properly designed and constructed, has proven itself an excellent type of construction in earthquakes.

Figure #2 illustrates quite well what happens to a masonry building when intersecting walls are not properly anchored to each other. The loss of

FIG. 2
Walls of this concrete block building in Arvin
were not properly anchored to each other.

Fig. #3 symbolizes a basic problem, that of adequate job supervision. The pile of concrete blocks shown were a part of a parapet wall above the roof. The design called for steel and concrete in the open cell. The failure to include a few

STRUCTURAL ENGINEERS ASSOCIATION OF CALIFORNIA

Review of Activities—Riverside Convention

Elected to serve as officers of the SEAOC for 1953 at the annual election of officers were: John E. Rinne, President; J. S. Barrish, Vice-President; and L. W. Graham, Secretary-Treasurer.

The Mission Inn at Riverside on October 16-18, hosted 362 registrants, guests and visitors attending a jam packed session of technical programs ranging from a discussion of earthquake and blast effects to a panel of five university professors and a leading Structural Engineer discussing the proper education and training of young men for the engineering profession.

Equally busy were the ladies. Their social program included bridge, canasta, cocktail parties, sight seeing trips, an outstanding fashion show, and a Saturday night banquet and dance.

Overall guidance of the Convention Program rested with Ben Benioff. R. W. Binder prepared the outstanding Technical Program. Donald Shugart introduced Riverside's Mayor-Elect Dales who welcomed the Convention to the City.

Professors C. Martin Duke and Morris Feigen, both Associates of E.E.R.I., presented a Summary of Earthquake and Blast Symposiums held last June at U.C.L.A. The Symposiums were initiated by the Earthquake Engineering Research Institute. It was brought out in the Summary that for the period 1906-46, California experienced 80 earthquakes ranging from 5.2 to 8.2 (Richter-Gutenberg Magnitude Scale.) R.G. 8.2 was the 1906 San Francisco quake. During the same period there were 629 quakes recorded world-wide with R.G. magnitudes from 7.0 to 8.7.

Audience participation was strong during the Friday afternoon panel discussion on Engineering Training. John J. Gould, president of the Northern Association, presided. Moderator was Professor L. M. K. Boelter, U.C.L.A. Members were: Professor David M. Wilson, University of Southern California; Professor H. H. Skilling, Stanford University; Professor A. L. Miller, University of Washington; Professor F. C. Lindvall, California Institute of Technology. Representing the practicing Structural Engineers was Paul E. Jeffers, consulting Structural Engineer and president of the Board of Registration, Civil and Professional Engineers.

The discussion involved the training of young engineers and their preparation for active work in their profession. The view points were as diverse and the desire of the practicing engineers (as expressed by Don Shugart and Bob Kadow) to have young men at least able to earn their keep as draftsmen while preparing for more complex work, and the expression of Professor Skilling that in extreme, training could be so lengthy that young men might spend a life time in study and have no time to work.

Gift Subscription For Christmas 1953

A S a service to its readers GIFT SUBSCRIPTIONS to ARCHITECT & ENGINEER magazine are available for this year's Christmas giving.

REGULAR SUBSCRIPTION Rate will apply:

United States and Pan America

\$3.00 a year; two years \$5.00

SOUTHERN CALIFORNIA ARCHITECTS DISPLAY BUILDING PRODUCTS

Products in Architecture was the subject of a two-day display of new building products at the Los Angeles Breakfast Club, recently, sponsored by the Southern California Chapters of the AIA and the Producers Council.

Exhibits were supplied by the architectural

school University of Southern California, architects and the Producers Council.

John J. Landon, headed the committee on arrangements for the architects and Herb Galitz represented the Producers. Assisting them were Stewart Granger, Clinton C. Ternstrom, Thornton Abell, Sidney Eisenshtat and Robert Inslee, architects, and council members Ran Hedger, Morris Hales and Robert Heublein.

WASHINGTON STATE CHAPTER

The November meeting was devoted to a review of architecture throughout the United States as viewed by one of Seattle's younger architects.

Jan Koczarski, winner of last year's Alumnae Traveling Scholarship, spoke on his travels throughout the nation during the summer and illustrated many of his observations in architectural trends by photographic slides.

Another feature of the meeting was a talk and illustrated slides by Dicken Castro, a young architect from Bogota, Colombia, featuring modern architecture in Colombia.

SAN DIEGO CHAPTER

James R. Libby, representative of the Freyssinet Company, Inc. of Los Angeles and New York, was a recent speaker before Chapter members. He outlined many of his experiences throughout the country with use and results of use of prestressed concrete in construction. Libby's company is one of the pioneers and specialists in this field of construction in the United States and abroad.

Thru approval of the executive committee the Chapter will sponsor and aid the University of California Extension Division in setting up a course in Construction and Architectural subjects to aid

anyone interested in the construction industry. Members of the Chapter will assist in giving instruction.

NORTHERN CALIFORNIA CHAPTER

Dean Joseph Hudnut of the Graduate School of Design of Harvard University was the principal speaker at the November meeting in the Palace Hotel, San Francisco, choosing as his subject "Architecture and The Spirit of Man".

The meeting was well attended and indicated the fall Chapter activities were of keen interest to chapter members.

Announcement was made that Pietro Pulluschi, FAIA, dean of the School of Architecture, Massachusetts Institute of Technology and Portland, Oregon, architect, and Richard Neutra, FAIA, of the Southern California Chapter and currently teaching at the University of Pennsylvania, will serve on the Jury for the Honor Award Program scheduled for February. A third juror will be selected, according to Worley Wong, chairman of the Honor Awards Committee.

New members include: Robert S. Oliver, Victor Abrahamson, and Stanley M. Smith, Corporate Members; William B. Reiner, George C. Quesada, Donald H. Smith, and Robert S. Cornish, Junior Associates.

on the "Revision to Practice Act" by Malcolm Reynolds; highlights and "Convention Report" of the recent CCA Conference in Yosemite Park; and "The Tehachapi Earthquake", a report and description of damage caused by recent earthquakes in California, by George Simonds, member of the

STRUCTURAL ENGINEERS ASSOCIATION OF SOUTHERN CALIFORNIA

Frederick J. Converse, Foundation Consultant and Professor of Soil Mechanics at the California Institute of Technology spoke at the November 5 meeting in Los Angeles, on the subject "Vibration Compaction of Soils".

New members welcomed at the meeting included Robert Brandt, Ray Brosterhouse, George Knudsen, and Albert Pratt, Jr., Associates; and Noel Finley, Edmund Foerstel, William Kuyper, and Allen Stubby, Juniors.

William Bostock, contact member with the Pacific Coast Building Officials Conference, reported on a recent Conference meeting in Seattle, where executives of the construction industry viewed and reviewed hundreds of codes most of which are incorporated in the Uniform Building Code.

Steve Barnes reported on the new method of nominating officers, whereby members express their preference by mail, and presented the following officers for election to serve during 1953:

Ben Benioff, President; William T. Wright, Vice-President; C. M. Corbit, Jr., Secretary-Treasurer. Two directors are to be named from four nominees. Results are to be announced at the December meeting.

SOCIETY OF AMERICAN MILITARY ENGINEERS—SAN FRANCISCO POST

Admiral John Lesslie Hall, Jr., Commander of the Western Sea Frontier, spoke at the regular November meeting in the Presidio Officers Club, San Francisco, on the subject "Carrier Task Forces and Amphibious Operations".

Admiral Hall, a graduate of the United States Naval Academy in 1913, has had a long and distinguished career in the Navy with vast naval experience during World War II in command of Amphibious Forces in the Mediterranean-European Theatres and amphibious commands in the Pacific.

AMERICAN SOCIETY FOR METALS PUGET SOUND CHAPTER

Dr. Robert B. Mears, manager of the Research and Development Laboratories of the U. S. Steel Company, discussed the subject of "Designing to Prevent Corrosion" before a joint meeting of the Puget Sound and Western Washington Chapters of the American Society for Metals and the American Society of Mechanical Engineers in Seattle recently.

Dr. Mears called attention to the fact that plant

Wright directors.

site selection is a very important aspect of designing to prevent corrosion. Prevailing winds, selection of materials, plant design, and climatic conditions must all be considered. Many examples of severe and expensive corrosive attack were shown on slides, and the talk was concluded with a discussion of the importance of protective coatings such as paints in delaying the start of corrosive attack.

STRUCTURAL ENGINEERS ASSOCIATION OF NORTHERN CALIFORNIA

"School House Construction" was the theme of the November meeting held in the Mart Club, San Francisco, November 6.

Taking part in the program were: Luther H. Lincoln, member of the California State Legislature and the Education Committee; Mrs. P. D. Bevil, president of the Congress of the Parent-Teachers Association of California; and Jack Merchant, past president of the California Association of School Trustees and director of the National School Boards Association.

Discussions following the speakers developed many interesting points relative to the school situation throughout California and the West, it being the general opinion that school officials and others should not tamper with the Fields Act at this particular time.

NATIONAL ASSOCIATION OF CORROSION ENGINEERS

L. L. Whiteneck, Long Beach Harbor Department chairman of a symposium to be presented at the National Association of Corrosion Engineers' meeting in Chicago on March 16-20, 1953, has announced papers will be presented by the following.

Coating Research and Application in Atomic Energy Operations by C. D. Watson, Investigation of Protective Coatings for High Temperature Underground Pipelines by C. R. Stauffer, Nature

and Theory of Filiform Corrosion by M. VanLoo, Effects of Composition of Steel on the Performance of Organic Coatings in Atmospheric Exposure by F. L. LaQue and J. A. Boylan and Weld Seam and Weld Flux Effects on Coating Life by A. J. Liebman.

The 1953 Chicago meeting will be the ninth annual meeting of the National Association of Corrosion Engineers, an international engineering association devoted to controlling corrosion and deterioration of metals and other materials.

ARCHITECTS' CONVENTION

Despite the moans and groans from those staying at Camp Curry at the foot of the Firefall, and the lesser complaints from others at the Lodge because of limited accommodations at the Ahwahnee Hotel, the recent Regional Conference of the California Council of Architects was a tremendous success.

If the question were asked what was the most outstanding feature of the four day program, we are certain that the answer would be the entertainment provided at the Sportsmen's Dinner on Saturday evening and put on by the Producers' Council.

Unfortunately our space is rather limited and we can only touch briefly upon the activities at the convention and we cannot possibly include the praise due all of the architects and producers who worked so diligently in putting on this affair.

Herb Mullen, architect of Sacramento, excelled in his handling of the dinner meetings and was ably assisted by Don Kirby and Bourne Hayne.

The untiring efforts of President Al West, Howard Noleen, Herb Duncan, George Connelly, John Cowley and Art Staat were largely responsible for the success of the activities sponsored by the Producers' Council.

Entertaining by the members of the Producers' Council at the Convention took place in the suite of rooms reserved for the council in the Ahwahnee rather than in individual private rooms. The atmosphere was one of tremendous friendliness and there was the feeling that it was a Council affair and not simply a private invitation from a member. This, of course, was very desirable and we think tended to strengthen the cause of the Council.

One of the serious notes of the Convention was a presentation at a Saturday luncheon by Mr. Bert Stewart, Jr., field secretary, of the National Automobile Club. Mr. Stewart announced his talk as being one of public relations and actually it was

one of the best condensations of good salesmanship that most of the audience had ever heard. The talk was given with the thought that the architects could improve their public relations, but actually the subject applied to both architects and producers, equally well.

The Sporting events took place on Saturday and we regret to advise that the Southern Division badly defeated the Northerners in the annual baseball game. The award of the Trophy as well as dozens of prizes for the other contests were made in the evening at the Sportsmen's Dinner.

As we said earlier, the highlight of the Convention was the program at the Sportsmen's Dinner which featured a program entitled "Blueprint, U. S. A." and put on by Mr. Herb Duncan and Mr. Hartley Sater, announcer for KGO. The purpose of the program was to point out to the nation over a national hook-up the high ideals of the architectural profession. Exemplifying this high type of professional man was Mr. Wendell Spackman. Much to the embarrassment of the audience and particularly his unsuspecting wife, Mr. Spackman proceeded to fumble and bungle the questions asked of him regarding the architects' code of ethics.

It was not until about half the program had elapsed before the majority of the audience realized that this was not the real thing, but a very clever mock program. In advice to the architects, Mr. Spackman's reply to the question "How to get around complex city building codes," was "Build in the country." We unhesitatingly recommend that Wendell be given the Convention Oscar for the best male actor.

TWENTY-SECOND ANNUAL CHRISTMAS JINKS

Mr. Roland MacNichol, chairman for the 22nd Annual Christmas Jinks, announced that the extravaganza will be held on December 4 in the Peacock Court of the Mark Hopkins Hotel. Cock-

California State Board of Architectural Examiners. Simonds included a number of interesting and educational photographic slides in the presentation.

WOMENS ARCHITECTURAL LEAGUE EAST BAY CHAPTER

Meetings for the fall season program of activities are under way with the first of a series of meetings being addressed by Dean William Wurster, University of California, Berkeley; also presented were reports of the recent California Architects Association conference at Yosemite Park.

Kathleen Date is secretary of the organization.

USC STUDENT CHAPTER ELECTS OFFICERS

Marvin C. Goodfarb has been elected president of the Student Chapter of the AIA at the University of Southern California.

Other officers chosen to serve with Goodfarb include Edward Woodrich, vice-president; Dionne Wisehart, secretary; Ferrydoon Chalfari, treasurer; and Robert Knapp, John Pointer, Art Pereira, and Robert Viault, directors.

SOUTHERN CALIFORNIA CHAPTER

Dr. Julian A. McPhee, President, California State Polytechnic College, and former director Vocational Education, State of California, member of the State Board of Directors of the California Parent-Teachers Association, and the California War Board of the U. S. Department of Agriculture, was the principal speaker at the November meeting in Los Angeles.

Dr. McPhee spoke on the subject "Legislators as I know them" and related many experiences with members of legislative bodies. A number of the members of the California State Legislature were in attendance at the meeting.

Robert Field, Jr., chairman of the nominating

committee presented the following as officers to serve for the ensuing year:

Henry L. Wright, President; U. Floyd Rible, Vice-President; Cornelius M. Deasy, Secretary; Savo M. Stoshitch, Treasurer, and Directors Hugh R. Davies (3-year term), S. Kenneth Johnson (2-year term), Kemper Nomland and Chas. E. Fry, past president, for 1-year terms.

LOS ANGELES ARCHITECT LEAVES FOR MEXICO

Eduardo J. Samaniego recently closed his Los Angeles offices and announced he was going to Mexico City to work on several architectural commitments which will require about a year to complete.

Upon completion of the work Samaniego expects to reopen offices in Southern California.

LOS ANGELES ARCHITECT EXPANDS OFFICES EAST

Welton Becket, FAIA, head of the Los Angeles architectural firm of Welton Becket and Associates has announced his firm has opened new offices at 1114 Grand Avenue in Kansas City, Missouri, to serve clients in the mid-west.

Other offices are maintained in San Francisco, Washington, D. C., and New York.

HARDWARE • TOOLS • ELECTRIC TOOLS • STEEL STRAPPING • STEEL

Other failures observed but not illustrated here include examples of reinforced concrete and structural steel construction.

A consideration of these failures and many more like them lead to three basic conclusions.

First that no material or type of construction is

ARCHITECT AND ENGINEER

inherently immune to earthquake damage or conversely that a well designed, well built structure of any material will satisfactorily resist the forces of an earthquake.

Secondly, and in a way an obvious corollary, a good design no matter how efficient on paper, must be properly incorporated in the building if it is to be effective.

The third conclusion which stems naturally from the first two and is that the control of the job in the past has in many instances been ineffective and must be strengthened and improved in the future if we are to reduce earthquake losses due to faulty construction.

Lack of adequate job supervision then is the real problem. The customary methods of job supervision are "old stuff" to the average engineer or architect but they will stand repeating here nevertheless.

First there is the occasional inspection given the average small job by the designer. On many jobs, particularly unit masonry structures where the mason covers most of his mistakes as he makes them, this occasional inspection cannot reasonably be expected to catch all of the small details which might be inadequate.

Secondly there is the checking by the local Building Department which varies with the locality and is constant only in the almost universal lack of sufficient personnel to do the job properly.

Thirdly there are various arrangements providing for additional inspectors either from the offices of the engineer or architect or from the various other qualified agencies having inspection personnel available.

There seems to be no question that adequate inspection can be made available and that it should be. The nominal cost to the client for this additional service is slight indeed when compared with the reduced hazard and with the reduced insurance rates allowed on superior construction. There is even benefit to the contractor, who usually looks askance on any attempt to further "interfere with his job." Experience in this regard indicates that a competent inspector can be an asset rather than a liability.

It is up to the entire construction industry to work out a solution to this problem but it is primarily up to the architect or engineer to sell a complete service to the client.

HOOVER EMPHASIZES ENGINEER RESPONSIBILITY TO MANKIND

Herbert Hoover, speaking before members of the Professional Engineers of Oregon during the recent Northwest Engineers Centennial in Portland, Oregon, declared that engineers have a heavy responsibility in maintaining the American way of life.

"Partial remedy for our ills is with all our might

GOOD LIGHTING

...as important as your most important tool

Engineers... draftsmen... designers... all know the alid rule is an all-important "tool," but certainly no more efficient than their ability to make full use of it. Don't invite eye-fatigue and impair job performance with poor illumination.

Smoot-Holman lighting equipment can solve this problem—as it has for thousands of workers in other western plants. Made to exacting quality standards, it provides illumination always ample, always correct for the eyes—light that's a perfect partner for production.

Equally important, there is a Smoot-Holman fixture to match any job's specific need! See your Smoot-Holman Lighting Engineer!

SMOOT-HOLMAN COMPANY Inglewood, Calif. Offices in Principal Western Cities - Branch and Warehouse in San Francisco

All-important "tools" help assure Smoot-Holman production and quality, too. Thus modern porcelain enameling furnaces fire on permanent "lifetime" finishes at 1600° Fahrenheit.

BOOK REVIEWS PAMPHLETS AND CATALOGUES

HANDBOOK OF ENGINEERING FUNDAMENTALS. Second Edition. By Ovid W. Eshbach. John Wiley & Sons, Inc., 440 4th Ave., New York. Price \$10.00.

The first edition of the Handbook of Engineering Fundamentals was a departure from traditional publication of materials of this nature. In addition to serving a utilitarian purpose in an economical way, it attempted to bring together the most important basic facts and principles upon which our technological and engineering advancement depends.

The second edition contains the same basic facts, however the engineering tables have been enlarged to include standard structural sizes for aluminum, and data on tangents and offsets for the use of civil engineers. Other tables and symbols have been brought up to date, and the MKS system of units has been incorporated in the tables of conversion factors.

It offers a ready reference to the basic ideas of applied science and mathematics for those studying the subjects, and for those who, years after their formal education, find need to clarify their concept or to be brought up to date.

DU PONT—The Autobiography of an American Enterprise. Charles Scribner's Sons, New York. Price \$5.00.

"This is a book without an author, just as it is a story without an end," begins the Foreword of this book on one of America's most notable business ventures. Unlike most historical accounts, which express the impressions of a detached viewpoint, this is a book written from the inside out, rather than from the outside in. It is not intended as formal history, but as a living record.

Generations of men and women played parts in the development of the company from a single powder mill to a national institution, and generations were to contribute to this chronicle. Thousands of photographs were examined; diaries; maps, letters; ledgers; and personal recollections, all have been carefully explored and presented in a most interesting and acceptable manner.

HOW TO PLAN A HOUSE. By Townsend & Dalzell. American Technical Society, Publishers, 848 E. 58th St., Chicago, Ill. Price \$5.00.

This is a Second Edition of "How To Plan a House" written by Gilbert Townsend, S.B., member of Ross, Patterson, Townsend & Fish, Architects and Engineers, Montreal, Canada; and J. Ralph Dalzell, B.S., managing editor, American Technical Society.

The new edition brings up to date the building of a home, which to most people, is the most rewarding and the most expensive single venture of their life. The book bridges the gap between a dream house and a dream realized. It is an informed and competent guidance for the future owner in the design and construction of the dwelling.

Whether the builder is interested in brick, frame, Cape Cod, or Georgian, whether his planned outlay is \$5,000 or \$50,000, this volume is an investment yielding untold dividends to those who will "look before they leap" in the building of a home.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below: to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

423. PROOF THAT MARBLE COSTS LESS. Proof that marble is economical is the subject of a new brochure published by the Marble Institute of America. This 16 page booklet is profusely illustrated, and contains besides a series of letters from building managers in widely separated parts of the country, attesting to the low cost of maintenance provided through the use of marble for floors, corridor wainscot, toilet partitions, etc. in all types of commercial buildings. A.I.A., 22-A, 18 pages illus. 9/25/52.

424. BETTER LABORATORY PLANNING. Better Laboratory Planning, a helpful guide for architects planning school, hospital or industrial laboratories has just been published by the Laboratory Equipment Section of Scientific Apparatus Makers Association, an organization whose members are leading manufacturers of laboratory apparatus and equipment. The book is file size and contains numerous photographs of outstanding laboratory installations. It does not purport to be a reference volume, but rather examines some of the considerations which underlie effective laboratory planning. A.I.A. 35-E, 28 pages illus., 10/13/52.

425. STANDARD SPECIFICATIONS FOR INDUSTRIAL LIGHTING UNITS. This RLM Specifications Book contains detailed specifications for 18 of the most commonly-employed incandescent and fluorescent industrial lighting units. Included are two new specifications, as well as important revisions and clarifications of existing specifications, and new tables of typical coefficients of utilization and light distribution curves. Due to the increased employment of high-mounting units for high-bay industrial installations, the Institute has established two new specifications covering such units. The first is RLM Standard Specification No. 4 for RLM High-Mounting Porcelain Enameled Reflectors. The second is RLM Standard Specification No. 40 for RLM High-Mounting Aluminum Reflectors. These two new specifications take the place of former standard specifications 19 and 20 for concentrating and spread-distribution aluminum reflectors. A.I.A. 31-F-233, 44 pages illus., 9/52.

426. HOSPITAL STANDBY PLANTS. How hospital patients and staff members are protected against electric power failures is shown in a new two-color folder just issued by D. W. Onan & Sons Inc. The folder describes how modern hospitals are safeguarded from power outages by Onan Standby Electric Plants. Models for every hospital need, from electric lights for operating rooms and exits to power for elevators and heating systems, are described and illustrated. Units range from 1,000 to 35,000-watt sizes in both air-cooled and water-cooled gas-engine driven models; full Diesel Electric Plants are listed in sizes from 12,500 watts to 55,000 watts. Automatic A.C. line transfer controls, designed to take over the load within seconds after commercial power is interrupted, are described. A309-952, illus., 9/52.

427. SPECIAL PURPOSE STEELS. Just published by Armo Steel Corporation is an illustrated catalog describing its special-purpose steels. Among these are stainless grades, zinc- and aluminum-coated steels, terne coat, enameling iron, and mechanical steel tubing. One section deals with Type 430 stainless steel and tells how it may be used as an alternate for Type 302 while the latter is defense-restricted. 12 pages, illus., 10/52.

428. UNIT HEATERS. A new catalog covering U. S. Unit Heaters is announced by W. C. McCord, President of United States Radiator Corporation. On request the new catalog will be sent to any heating engineer, heating contractor, wholesaler, architect, or builder—without charge. This catalog will be helpful to anyone who makes calculations and layouts for heating installations. A.I.A. 30-D-11, 16 pages illus., 9/52.

429. ZEOLITE WATER SOFTENERS. Troubles caused by the utilization of hard water and the multiple economies effected by curing them are thoroughly discussed in a comprehensive bulletin issued by The Permutit Company. The bulletin lists several industries in which steam and water are of importance. It explains the three basic types of ion-exchange equipment and shows how these units can be profitably utilized. No. 2386, 16 pages illus., 9/52.

SAN FRANCISCO ARCHITECT APPOINTED AS CONSULTANT

Henry Hill, San Francisco architect, has been appointed a Consultant for Gunnison Homes, Inc., a housing subsidiary of the United States Steel Corporation.

Hill, a graduate in Architecture of the University of California, London, and Harvard, is on the faculty of Stanford University. He has had wide experience in residential and commercial architecture in the San Francisco Bay Area and is the author of a number of books on architecture and related subjects.

RALPH H. SMITH NAMED NEW PRESIDENT OF WELDING GROUP

Ralph H. Smith, Phoenix, Arizona, has been named President of the American Welding Society's Arizona Section.

Other officers include J. August Rau, vice-chairman; Charles Fogwell, second vice-chairman; Walter E. Riley, secretary; and F. Morris Aspey, treasurer. Directors named were Edward Allison, John Dyer, William Garland and Phillip Binkley.

NATIONAL SOCIETY OF PROFESSIONAL ENGINEERS

The National Society of Professional Engineers, at their recent annual meeting in Tulsa, Oklahoma, adopted a resolution calling for the development of the nation's natural resources by "private enterprise."

The resolution declared in part, "The National Society of Professional Engineers favors the use of private enterprise in the development of our natural resources, guided by sound principles of conservation," and pointed to the Niagara River Power Development in the New York and the Hells

Canyon on the Snake River in Idaho as instances wherein legislation is being considered that violates this principle.

ENGINEER A. M. NISHKIAN of San Francisco has become associated with the general contracting firm of MacDonald, Young and Nelson.

HOLLYWOOD JUNIOR
COMBINATION
SCREEN and METAL SASH DOOR
★
The "WEATHER-WISE"

Built-in telephone facilities will add an "extra" touch to your building plans

It's so easy to make planned telephone facilities a part of your building plans. And clients will appreciate the extra finish that built-in conduit for concealed wiring and conveniently located telephone outlets lend to their home. The cost of installing such facilities is surprisingly low... and it costs nothing to make them a part of your building plans.

Just call Pacific Telephone's free Architects and Builders service. They'll be glad to help you plan telephone facilities for better living tomorrow in the homes you build today.

Put built-in telephone facilities in your plans

IN THE NEWS

SAN FRANCISCO FACTORY ADDITION

The Planters Nut & Chocolate Company are building a 5-story, with basement, addition to their San Francisco manufacturing plant at 500 Paul Ave.

Of reinforced concrete construction the building will be 100 x 160 ft.; will include automatic sprinkler system, 2-freight elevators, and will cost \$1,000,000.

H. J. Brunner, San Francisco, is the Structural Engineer.

SACRAMENTO BUILDS NEW Y.M.C.A.

The first unit, comprising a gymnasium and club rooms, of a new Young Men's Christian Association building is being built in Sacramento at a cost of \$300,000.

The building is of 2-story reinforced concrete construction.

Herbert A. Goodpastor, Sacramento, is the architect.

NEW LIBRARY FOR STOCKTON

The City of Stockton has authorized architect Peter L. Sala of Stockton, to draw plans for the construction of a new \$1,600,000 Library Building to be built on Oak Street in Stockton.

The new building will contain 80,000 sq. ft. and will be of reinforced concrete construction.

HIGH SCHOOL GYMNASIUM

The Analy Union High School District of Sebastopol recently authorized architect Clarence Feliciano of Santa Rosa, to design a new Boys Gymnasium for the Sebastopol High School which will have a seating capacity of 1200.

Showers, lockers, special exercise rooms, and team rooms, will be included in the new building of reinforced concrete construction. Estimated cost is \$350,000.

TEMPLE BETH JACOB PLANNED IN OAKLAND

The Temple Beth Jacob of Oakland has commissioned the architectural firm of Ponsford & Price to draft plans and specification for the construction of a new \$250,000 Temple in Oakland.

The new building is to be of reinforced concrete and frame construction.

ARCHITECT SELECTED

The board of supervisors of Napa county has commissioned architect Russell G. De Loppé of Berkeley, to draw plans and specifications for the construction of a county Detention Home.

The new building is being planned for Napa.

LOW RENT HOUSING

The Housing Authority of the City and County of San Francisco announced recently that preliminary drawing had been completed and Federal approval received, for the construction of a low rent housing project in the City of San Francisco to cost \$6,000,000.

Site of the project is in the Turk, Eddy, Laguna, Buchanan, Pierce and Divisadero streets section of the City. Construction will include 7-eleven story and 7-three story

buildings. Spencer & Ambrose of San Francisco are the architects.

NEW COURT-ROOM BUILDING

Architect Michael Goodman of Berkeley is designing a new Courtroom Building for construction in Redwood City by the San Mateo county board of supervisors.

The new building will contain 8 court-rooms, a new jail and sheriff's office and the program will include numerous alterations to the present County Court House.

Estimated cost of the project is \$1,780,000.

ARCHITECT FOR SCHOOL

The Bellevue Union Elementary School District, Sonoma county, has selected architect C. A. Caulkins, Jr. of Santa Rosa, to design a new Elementary School building.

The new school structure will include 13-classrooms, kindergarten, administration, multi-purpose, kitchen and toilet rooms.

SAN JOSE COLLEGE NEW BUILDING

The San Jose State College will soon have a new Speech and Drama building on the campus as result of the construction of a new building containing 50,422 sq. ft.

Plans call for inclusion of a hall basement. Estimated cost of construction is \$965,047.

RIO VISTA MASONIC TEMPLE

The Rio Vista Masonic Hall Association recently authorized architect Herbert E. Goodpastor of Sacramento, to draw plans for construction of a new Masonic Temple for Rio Vista.

Plans call for a single story building, with basement, to cost about \$80,000.

ARCHITECT SELECTED

Architect C. A. Caulkins, Jr. of Santa Rosa has been commissioned by the Bennett Valley Union Elementary School District of Sonoma county, to draw plans for the construction of a new school building near Santa Rosa.

The new building will contain 4-classrooms, office, and toilet rooms and will be of frame and stucco construction.

BAKERSFIELD RAZES SIX CITY SCHOOLS

Bakersfield school officials have approved demolition of six schools damaged by recent earthquakes.

To be demolished in their entirety are the Hawthorne, William Penn and Williams schools. The Jefferson School will be demolished with exception of six classrooms, all of the Lincoln school except the cafeteria, and the McKinley school except for two classrooms and cafeteria.

ARCHITECT MOVES OFFICES

Architect Wallace A. Stephens announces the removal of offices from Burlingame, and the opening of new offices at 327 Waverly Street in Menlo Park for the general practice of Architecture.

NAMED PRESIDENT OF THE AMERICAN WELDING SOCIETY

Fred L. Plummer, director of engineering for the Hammond Iron Works of Warren, Pa., has been elected president of the American Welding Society for 1953-54.

Plummer, a prominent engineer, is the

author of two books and more than thirty technical articles on various phases of engineering.

Eric R. Seabloom, supervisor of field-engineering, Crane Company, Chicago, was elected first vice-president, and J. H. Hummerstone, vice-president Air Reduction Co., second vice-president.

Among directors elected to serve with Plummer were: Gaird H. Garrett, vice-president Thompson Pipe & Steel Co., Denver, and Harold R. Pratt, American Bureau of Shipping, Portland, Oregon.

SCHOOL BONDS APPROVED

Voters of the Hayward Elementary School District recently approved a \$950,000 school bond plan with funds to be used in the construction of four new elementary schools.

ARCHITECT SELECTED

Architects Arthur D. Janssen and W. H. Daseking of Menlo Park have been selected by the Sequoia Union High School District officials to design a new Gymnasium Building and a Swimming Pool to be added to the Menlo-Atherton High School in San Mateo county.

TWELVE-POINT FASTENERS PLACED ON MARKET

A threaded, 12-point aircraft type fastener in ferrous, non-ferrous, and precious metals has been placed on the market by the Twelve-Point Fastener Company, 4517 Lorain Ave., Cleveland, Ohio.

Manufactured in such items as cap-screws, machine screws, sheet metal screws, self tapping screws, recessed set screws, machine bolts, stove bolts, lag bolts, recessed socket bolts, automotive spring center bolts, in all standard diameters and lengths, for industrial, automotive and marine use.

APPOINTED SALES DIRECTOR

John Hellstrom, vice president of the American Air Filter Company, has been appointed director of Sales of all AAF and Herman Nelson products, with general offices in Louisville, Ky.

Hellstrom has been organizing the Company's Pacific Division which activity is centered in San Francisco.

...new colors of easy-to-clean

Suntile

Suntile

GRAY HAUTEVILLE 734

**a neutral tone
of great service**

Suntile Gray Hauteville is a mottled gray tone. Gray has widespread use in many different types of interiors. The mottled effect makes it even more practical. This new gray is a warm, neutral color that avoids the "faded" tints of the past. It helps to control glare and create working conditions where vision is at its best. For obvious reasons mottled gray tends to combat dirt, smudge and stains. Suntile Gray Hauteville is but one of the functional colors in the new color line developed by Faber Birren, noted color authority, and The Cambridge Tile Mfg. Co.

Cleanliness is a dollars and cents matter in industrial kitchens or cafeterias, in food or drug plants, laboratories or public buildings. In fact, cleanliness is a "must."

Your selection of the right material for walls and floors will have much to do with the cost as well as the ease of cleaning and maintaining these interiors.

For instance, real clay Suntile has a hard, impervious glazed finish that is easy to clean with inexpensive soap and water. Dirt, grease, and smudge find no haven with Suntile. Costly, periodic redecorating and refinishing are ended practically for the life of the building.

Beyond this, however, Suntile has *color* advantages that also aid "housekeeping." New mottled tones of Suntile tend to resist soiling and reduce the necessity for "mirror-like" maintenance.

This very practical result is typical of the new Suntile functional color line. Better lighting, increased production, fewer accidents and higher employee morale are other results with sound business advantages.

HOW TO SELECT COLORS THAT ARE RIGHT for commercial, industrial and institutional interiors is discussed in our new descriptive booklet "Suntile Functional Color Recommendations." Your Authorized Suntile Dealer will give you a free copy or you may write us direct, Dept. AE-12, The Cambridge Tile Mfg. Co., P. O. Box 71, Cincinnati 15, Ohio.

Robert R. Jones, A.I.A.,
Architect

The new All Saints' Episcopal Church at Carmel-By-The-Sea, California, is the latest development of a Church activity started in the community about 1910.

The Church structure and landscaping is a pleasing blending of traditional and modern architecture, and visitors from all parts of the world have declared the project one of the most outstanding of modern times. (See page 10 for complete details.)

PRACTICAL BEAUTY of Colorful Clay Brick ... a "natural" for GOLDEN GATE PARK

PUBLIC reluctance to allow the building of any structure to mar the beauty of Golden Gate Park was one of the most important factors in the selection of materials for McLaren Lodge. Colorful Clay Brick adapted itself beautifully, both to the simple, modern architectural motif and to the natural park landscape. Joints are deepcut to give sharp shadow lines and the brick is laid in continuous horizontal, vertical joints.

Another demonstration of "inside or outside—
a Clay Brick wall, best finish of all."

NEWS and COMMENT ON ART

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is offering the following schedule of exhibitions and events during December and the holiday season:

EXHIBITIONS: Art for Christmas, Painting and Sculpture; Christmas Decorations, table ornaments and trees; items from the Albert M. Bender Collection; Children's Finger Paintings, from the Golden Gate Nursery Schools; continuation of San Francisco Women Artists; Six Canadian Painters; Silk Screens of Indian Paintings by W. Crumbo, and Gift Ideas for Christmas, under \$25. A special group of Latin American Paintings from the Museum's Collections will be shown at the Parkmerced Branch, through December 31.

SPECIAL EVENTS: The Lecture Series, each Sunday, include Texture, Form and Color—S. F. Women Artists, by Barbara Fitzwilliams, December 7; Canadian Contrasts, by Lore Oppenheimer, December 14; and Albert Bender, a San Francisco

Collector, by Anneliese Hoyer, December 21. The Monday evening Lecture Series will be held December 1 and 8 only, with a new series starting on Monday, January 5.

Art Classes—Art for the Laymen (Tuesdays); Sketch Club (Fridays); Painting Class (Fridays); and Children's Class (Saturdays) will not be held during the holidays, but will be resumed in January.

EXHIBITION OF CONTEMPORARY BRITISH LITHOGRAPHS

An Exhibition of Contemporary British Lithographs will be shown at the M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, during December.

The group of eighteen colored prints, originally made for the Festival of Britain, were recently shown at a special display at the British House of Commons.

Included in the group of exhibiting artists, are

CHURCH OF LATTER DAY SAINTS

East Fresno, California

HAROLD W. BURTON, Architect

Decorative tile-brick exterior with large area devoted to glass windows, plus long sloping roof, combines to add to the complete outward beauty of this new San Joaquin Valley church.

H. L. SHIELDS & SONS, General Contractors

BAPTIST RIVER ROAD CHAPEL

EUGENE, OREGON

DONALD W. EDMUNDSON, A.I.A., Architect

NEIL R. KOCHENDOERFER, Associate

Located approximately five miles north of the City of Eugene, on the River Road. It is the first unit of a larger project.

The entire project is to consist of three units, the First being the Chapel shown above and now used for Church services. The Second unit will be a Sunday School addition connecting with the present entrance and extending to the right, and the Third unit the Main Auditorium which will connect with the Sunday School and extend back forming a "Z" shaped plan.

The Chapel has 2,057 sq. ft. and cost approximately \$30,000. The over-all dimensions are 30 ft. x 80 ft.; the building has no basement due to occasional high water in this area. Seating capacity is 225.

From the main entry there is access to the toilet rooms, heater room and small kitchenette. High

windows at the back of the auditorium will eventually open into a good sized Sunday School room and serve as overflow for the present Chapel. In the ultimate plan the Chapel will serve as a Fellowship Hall.

Exterior is split Roman Brick of a reddish-salmon color. This is over wood frame. Roof is supported with glue laminated beams with purlins. Two-inch tongue-and-groove decking is exposed with the bottom surface saw keried and stained. A rigid insulation is provided over the top of the decking and composition shingles are used for the finished roof.

Interior walls are finished with plywood, smooth below the wainscot with striated in the upper walls.

The Baptistry back of the Chancel is separated from the Auditorium with an open grill which has a removable section in the center.

First Baptist Church

LEBANON, OREGON

DONALD W. EDMUNDSON, A.I.A., Architect

NEIL R. KOCHENDOERFER, Associate

The First Baptist Church at Lebanon has 16,288 sq. ft., was constructed at a cost of approximately \$95,000.00.

Overall dimensions are 132 ft x 82 ft., and the Auditorium seats 434. A Fellowship Hall at the rear of the Auditorium has double glazed windows so that by the using of microphones and speakers this area can be used for over-flow, or for mothers with small children. This room will seat approximately 200 in chairs and 150 at tables.

There is a small stage at one end and a kitchen at the other. The floor of this unit is approximately 4 ft. higher than the main auditorium which gives it a semi-balcony effect in its relations to the main auditorium. This also permits the Sunday School

rooms under this part of the building to be well out of the ground.

The balance of the Sunday School area is under the main auditorium and is lighted by large windows opening into window areaways.

An interesting condition surrounding the construction of this building was the fact that the congregation started with very limited funds and with the hope that they might enclose the building and get it under roof if no more. After that they hoped to make a drive to get at least the Sanctuary finished. However, as the building progressed their enthusiasm grew and was reflected in their finances so that they were able to complete the entire building, purchase pews and most of their Sunday School equipment without any undue delay.

LEONARD SWINK, Construction Supervisor

ALL SAINTS' EPISCOPAL CHURCH

CARMEL-BY-THE-SEA, CALIFORNIA

ROBERT R. JONES, A.I.A., Architect

... WESTERN CHURCH DESIGN

First Episcopal church services were held in this community as early as 1910, however, it was not until Christmas Day 1912 that the first church services were held in a church building and on that day services were conducted in the fore-runner of today's building by the Reverend Charles Gardner, D.D., then Chaplain at Stanford University in Palo Alto.

Subsequent expansion and development of facilities were made until July 1948 when a new building fund campaign under the chairmanship of M. R. Allen, USN, RET., was launched and Architect Robert R. Jones, A.I.A., was engaged to prepare plans and specifications. Ground breaking ceremonies for the new building were observed on February 5, 1950, and the completed church was dedicated with appropriate observations early in 1951.

Every well designed building is planned to harmonize with site surroundings and fill a definite

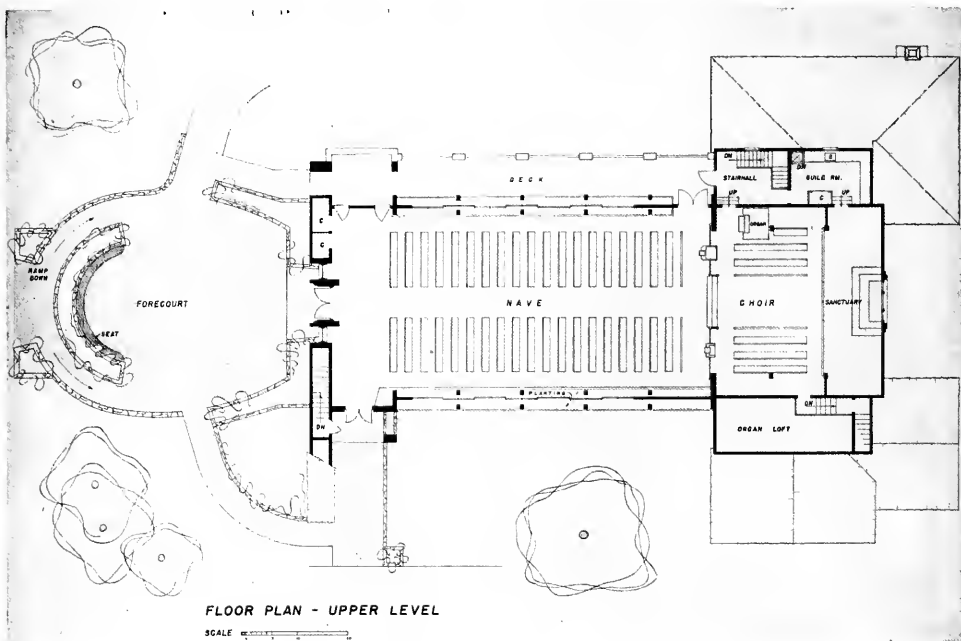

place in the community, therefore architecturally the All Saints' Episcopal Church in Carmel-by-the-Sea, is a unique blending of traditional church structure features and modern church design. The customary has been respected by architect Robert R. Jones, A.I.A., and his staff, and the drastic has been avoided with the result a graceful, pleasing church.

The architect's problem was to design a building which would provide for all the needs of the church on a limited budget and at the same time achieve spiritual inspiration dignity and inspiration in a relatively low structure.

The steepness of the terrain on the site, the placement of trees and the future expansion of the building were major problems confronting the architect and were factors dictating to a large extent the final type and size of church constructed.

To achieve the greatest height in the church proper, all use of horizontal cross-ties was eliminat-

FLOOR PLAN — upper floor level

Top View—Shows detail of entrance; large cross over doorway and tall slender stained glass windows at either side of door which extend from entrance floor level to roof.

Lower View—Details landscaping arrangement of entrance; long sloping roof, and wings (at right) of lower floor level service rooms.

. . . WESTERN CHURCH DESIGN

ed from the construction by designing laminated wood arches, similar in engineering principle to the Gothic arches. These arches support the ceiling and the roof of the main church and rest upon a concrete slab floor, which in turn rests upon the reinforced concrete construction of the lower floor.

The concrete slab of the lower floor contains radiant heating, providing the main source of economical all-year heating for the entire church. The main church is heated by a forced hot air system easily regulated for comfort, depending upon the number of people assembled in the church. To facilitate servicing and maintenance, and with economy of installation in mind, all heating and ventilating ducts and electrical conduits are housed in the spaces over the windows between the inner ceiling construction and roof line of the main church.

After solving the site and functional problems, consideration was given to coordinate in the structure the simplicity of detail which gives its distinc-

tive character. Instead of superficial and meaningless ornamentation, there was incorporated as integral parts of the structural design of the building areas for wood sculpture and for stained glass windows, both representing two of the oldest and finest liturgical arts. Towering on each side of the main entrance, for example, are two slender panels of stained glass, providing a striking yet dignified frame for the doorway and the massive gilded cross above it.

In the upper half of the north stained glass panel is shown Michael the Archangel, who symbolizes the battle against evil. Beneath him is a similar representation of Archangel Gabriel. On the south panel are companion stained glass windows portraying St. Raphael and St. Uriel. God's eternity is signified by the cross and circle above St. Michael.

Arrangement of the Nave and Chancel is planned with exposed wood-arch supports of roof and windows that open the church to the trees and the

Building viewed from northwest corner, showing sloping site. Wings at right house Music Room, Rector's Office, and Parish Lounge.

. . . WESTERN CHURCH DESIGN

sky thereby exposing to the church interior some of the local beauties of nature that God has created.

Forty pews provide seating in the nave.

On either side of the steps to the chancel are simple low screens into which are set the pulpit on the Gospel side and the lectern on the Epistle side. All the woodwork, other than the seating, is in Janezaro wood.

Together with the large stained glass windows, the chief decorative feature of the sanctuary is the reredos. This, by long traditional usage, occupies the space between the altar and the window and is about of an equal height with the altar. Together the altar, the reredos, and window form the focus or main feature of the church, for thereon are depicted either representationally or symbolically the central tenets of the Christian faith.

The warm hospitable glow of the redwood interior is carried out further in the background

colors of the stained glass windows, chosen from the copper, bronze and wild honey colors, the sherry and the chocolate tones. These contrast with the turquoise and purples of the secondary figures, and are brought to a climax in the rich rubies in the robe of Our Lord in the great chancel group over the main altar.

The entire furnishings and windows reveal deep spiritual understanding, great artistic gifts, and skilled craftsmanship on the part of those who created them.

Beneath the church is a spacious Parish Hall with a full size stage, a kitchen of restaurant proportions, a lounge, music room, and parish offices.

The landscaping which gives the church its fine setting was planned by Thomas Sherlock, landscaping architect, while the patio and terrace was designed by landscape architect Thomas Church.

ARTIST'S PERSPECTIVE OF NEW CHURCH

MENNONITE BRETHREN CHURCH

Reedley, California

ARCHITECTS { H. RAFAEL LAKE
ELSO B. DiLUCK

Structural Engineer: F. W. KELLBERG

Mechanical Engineer: H. WAYNE TAUL

Electrical Engineer: EDWARD LOWE

COST \$375,000

. . . WESTERN CHURCH DESIGN

One of the most outstanding among new church construction in the San Joaquin Valley of Central California, is the large and distinctive Mennonite Brothers Church building in Reedley, center of a diversified agricultural community.

The new structure was designed by the architectural firm of H. Rafael Lake and Elso B. DiLuck of nearby Fresno, to serve the needs for a central point of church activities and at the same time could be used for a number of festivities in conjunction with the church itself.

Exterior and interior design of the building is rather conservative and is in complete harmony with architectural development of nearby properties and the surrounding areas.

The building is of reinforced concrete and steel, with ample use of windows for natural lighting and decorative purposes. Entrances and exits provide for full or partial use of the building, depending upon the occasion. Provision has been made for seating 2,500 persons.

Due to wide variations of temperatures in the area between summer and winter, complete radiant heating has been installed for winter use and to assure a comfortable temperature during the warm and hot summer months a thorough, modern, air conditioning system has been provided.

Actual construction of the church was under the supervision of William D. Wiebe, chairman of the Building Committee.

FIRST FLOOR PLAN—

MARBLE FROM THE HOLY LAND

STORY OF A MODERN BUILDING PRODUCT FROM THE LAND WHERE JESUS WALKED

Marble has been used in the building of houses of God in the Holy Land since the time of Solomon's mighty Temple in Jerusalem when, says the First Book of Kings, "Solomon had fourscore thousand hewers in the mountains . . . and they brought great stones, costly stones, and hewed stones, to lay the foundation of the house . . ." The exquisite, Roman-style synagogue at Capernaum, where Christ is thought to have preached, is of white marble. Golden marble decorates the facades of some of Nazareth's most imposing churches. Pink-streaked marble has been used for millenia in Jerusalem. It was a favorite building material and, man believed, all the marble sources in the little land of Palestine, smaller than the state of Maryland, were known.

The experts were, therefore, distinctly surprised when, some twenty years ago, archeologists came upon the remnants of a number of ancient synagogues in the Valley of Esdraelon. The synagogues dated back to the time of Jesus, whose childhood hometown of Nazareth overlooks the valley from the Galilee hills to the north, and it was considered possible that the original version of the synagogue where Christ studied may have resembled them. The newly-discovered remains disclosed, however, that the valley synagogues were built of a cream-and-grey marble which came from none of Palestine's known quarries. Was the marble imported? It did not seem logical that the ancient Hebrews would transport marble hundreds of miles when their land produced many varieties of excellent stone. Where, then, did the marble originate?

For two decades, archeologists in the Holy Land puzzled over this problem. The solution was found by accident a year and half ago when a member of the Jewish farm settlement of Hefizbah in the historic valley, while on a stroll, stumbled upon a huge and neglected quarry in the foothills of Mount Gilboa. The quarry, according to mining engineers and archeologists who soon examined the site, had been untouched for 1,900 years, but the soft-hued marble still glowed in the sun.

It was a most unlikely site. Mount Gilboa is

traditionally believed to yield . . . nothing. For it was upon Gilboa that King David placed one of the most bitter curses of all time, a curse of vengeance for the deaths of Saul and Jonathan following the Israelite defeat on the mountain at the hands of the Midianites:

"Ye mountains of Gilboa, let there be no dew, neither let there be rain upon you, nor fields of offerings for there the shield of the mighty is vilely cast away, the shield of Saul as though he had not been anointed with oil."

Even in modern times, Gilboa towered above the
(See Page 31)

MARBLE INDUSTRY ANNUAL CONFERENCE MARBLE INSTITUTE OF AMERICA PLEDGES SUPPORT

Building Material Costs and Maintenance Important

Lowest annual cost will be the recommended yardstick for conservation in government building, James W. Follin, chairman of the subcommittee on Construction, Conservation Division, Defense Production Authority, told the Marble Institute of America, at its recent Annual Meeting held at Sun Valley, Idaho.

Commenting upon the report that the Building Research Advisory Board was recommending lowest annual cost as the yardstick for conservation in government building, Follin said: "There were about as many opinions as to what conservation in construction denoted as there were people with whom the question was discussed. Was it the

JAMES W. FOLLIN
Marble Institute Speaker

idea to conserve only controlled materials, or only critically short materials, or all materials, or money, or just what was the important saving to be made?"

Lowest annual cost was the yardstick agreed upon as the best day-in and day-out policy even in time of national emergency or shortage. This, Mr. Follin explained, was the combination of first cost with maintenance and operating expense over the length of time a facility is used. The pyramiding of operating costs makes important the selection of building equipment and finishes which require less maintenance.

If this program is accepted and carried out satisfactorily, it should mean that the smallest number of taxpayer's dollars will be required to maintain a given improvement. It is also the fairest basis for considering competing constructions, materials, or equipment, BRAB found. On the whole it gives quality products an even start with other products.

But Mr. Follin warned that while this is sure to appeal to suppliers of quality products they should guard against disappointment in the way in which the policy is applied in particular instances. "In the first place, the standard of service required and the period of use of any structure, which largely dictate the materials to be used, is an administrative determination," he pointed out.

"In the second, there may be inadequate information to give precise estimates of maintenance and operating expense even on materials long in use, not to speak of fairly new products on which such information is impossible." He suggested that one safeguard would be to gather, and make available, authentic technical information of this for the use of designers and administrators.

"Opinions are sure to differ as to how long a useful life should be credited to today's construction, to today's most durable office buildings," he continued. Office buildings built 50 years ago are generally obsolete. Will this be true of today's construction, a half century hence?

"Granted that some of today's construction will be demolished in the next 50 years because the land has become too valuable or because they stand in the way of some major public improvement, I am of the opinion that the great majority of them will not be torn down as long as they are structurally sound and can be reconditioned, re-equipped, and refurbished to meet the occupancy demands of the 21st century. Today's buildings are so designed that piping or equipment can be replaced with relative ease.

"Conservation is fast becoming a most essential guide in construction. In the past we Americans have had such an abundant supply of materials and manpower that we have not yet learned the

lessons of thrift. Now we realize that our resources are not inexhaustible. The principal object of conservation in building, says BRAB, is to help fulfill the Nation's requirements for building under any circumstances with maximum efficiency in the use of money, manpower and materials."

MARBLE INSTITUTE SUPPLIED DATA ON MAINTENANCE COSTS

A dramatic challenge to members of the building industry who feel that marble is expensive has been issued by facts and figures compiled by the Marble Institute of America, and published in booklet form entitled "Marble Costs Less, Wears Better, Lasts Longer." The material will be used as the basis for a nation-wide educational campaign.

Included in the material presented to the Institute's members during the recent annual conference at Sun Valley, Idaho, is a number of case studies which the Institute believe represents a good cross-section of experience throughout the nation and covers a sufficient amount of time to be factual in application.

A "plumb-bob" view of the marble floor of the Grand Central Terminal over which 220,000,000 pass annually—has been in service over forty years.

To demonstrate the value of marble in remodeling and renovating buildings, a study of the Bartholomew Building in New York City, where when the owners decided to make various capital improvements, one of the first steps was the installation of improved lighting and a marble wainscot 5 ft. 4 in. high in the corridors of the twenty-floor building. This project has been carried out one floor at a time, in the twenty-one year old building, and ten floors have now been completed. The history of the Grand Central Terminal Building is also cited and includes a letter from John J. Ponce, Superintendent of Building Maintenance at the Terminal, in which the foresight which prompted

ENGINEERING REPORT

TEHACHAPI EARTHQUAKES

Panel of Distinguished Engineers Discuss Cause and Effect of Quakes

A number of technical phases of the recent Tehachapi earthquakes in the lower San Joaquin Valley, were presented to members of the Structural Engineers Association of Northern California at a meeting in San Francisco, which many engineers throughout the west will be interested in reading. Accordingly the following briefs have been prepared for publication in *Architect & Engineer* magazine:

HENRY J. DEGENKOLB

Summary of talk by Henry J. Degenkolb, Structural Engineer with John J. Gould, Consulting Engineer, San Francisco.

The major lesson to be learned from the Tehachapi earthquake were not to be found in the obvious damage to the old masonry structures that failed so completely and were featured in the newspaper accounts of the disaster. These merely re-emphasized what had been learned in previous earthquakes—the necessity for good design, workmanship, and the tying together of a building to make it act as a unit. Our best information comes from the performance of buildings that did not fail and especially in those that sustained only partial failure.

Flexible buildings, such as those made of timber, corrugated iron, or steel panels such as in service stations, were either undamaged or very slightly damaged, even though they were not designed for lateral forces and seemed to be of very poor design and construction for even vertical load only. The vast majority of timber homes and small commercial buildings in the area were undamaged.

Buildings which had been designed with some lateral force resistance in mind performed acceptably, even though they would not meet present day code requirements. The Tehachapi Valley Union High School, the Tehachapi Elementary School, Odd Fellows Hall, the Tehachapi Lumber Co., and other well designed buildings were virtually undamaged. The Town and Country Market, good for only about 5½ lbs. of wind had broken windows and some cracked plaster, but was open for business shortly after the earthquake.

The Tehachapi Institution for women, built in 1932 before the Riley act or Field Bill, had badly

wrecked tile partitions and wood roof framing. The tile partitions evidently failed at a rather low calculated unit stress. The exteriors of these buildings appeared to be virtually undamaged and gave little notice of the damage found within.

In Arvin, where the construction is of a more recent date, much less damage was found although the evidence seems to indicate that it was shaken more severely than Tehachapi. An interesting structure here was the George Simpson Motors—an auto agency which suffered very little damage in spite of the large amount of glass used in its modern design.

WILLIAM K. CLOUD

Abstract of talk by William K. Cloud, Acting Chief, Seismological Field Survey, U.S.C.G.S.

The 21 July earthquake operated instruments at 39 of the U. S. Coast and Geodetic Survey strong motion stations. Maximum accelerations and displacements recorded at several stations were:

Station	Acceleration*	Displacement*
Taft	31 miles from epicenter	18% gravity 1.5 inches

Pasadena 76 miles from epicenter 5% gravity 1.3 inches
 Hollister 136 miles from epicenter 1% gravity 0.3 inches
 * Based on preliminary scaling of records.

At a later date, the USC&GS will publish analyses of all records and also an isoseismal map of intensities.

At the present time two very different scales for rating earthquakes are in general use. They are not synonymous. The Modified Mercalli Intensity Scale of 1931 is a measure of observed effects or violence, and for any earthquake there are many intensities; the intensity at any particular spot depending in large part on distance from epicenter, local geology, and condition of structures. The Gutenberg-Richter Scale of Magnitude on the other hand is a measure of total or original energy. There is, thus, but one rating on this scale for each earthquake and it does not relate to what happened, to what the effects were.

Without explanation, in isoseismal map or other form, comparison of different earthquakes by use of Modified Mercalli Scale ratings is apt to be misleading. The Gutenberg-Richter scale can be used to compare earthquakes but as the comparison is one of size and not effect, it too is apt to be misleading. Both scales have their place and are very useful tools—only, however, if understood and properly used.

In conclusion, it is urged that extreme caution be exercised when dealing with earthquake data, neither swallow camels nor gag on gnats.

S. B. BARNES'

Condensation of talk by S. B. Barnes', Consulting Structural Engineer of Los Angeles.

One was impressed by the apparent high intensity of shock and damage at the Southern Pacific Railway tunnels in the Tehachapi quake.

The east-west direction of the second quake at Bakersfield was markedly evident.

Buildings that we expected to be damaged, were damaged.

Buildings designed for earthquake stood up quite well, indicating that our general methods of design are reasonably satisfactory for limited height buildings.

The Tehachapi quake as it affected Los Angeles, although of lesser intensity, appeared to have a much longer period. It affected our taller buildings but did little damage to the shorter, stiffer structures. I would estimate the period at Los Angeles to be in the order of 0.5 seconds.

Some of the taller buildings in the Los Angeles area suffered considerable damage in cracked exterior and interior walls. Plate glass and plastered partitions suffered severely.

The Statler Center at Los Angeles designed for

STRUCTURAL ENGINEERS ASSOCIATION OF SOUTHERN CALIFORNIA

William J. Bobisch, director of design, Eleventh Naval District Public Works office, San Diego, was the main speaker at the December meeting held in the Alexandria Hotel in Los Angeles. His subject was "Pre-cast and Tilt-up Concrete Construction in the 11th Naval District" and many of the projects using pre-cast and tilt-up concrete was discussed from the viewpoint of design, construction methods and costs. Colored slides were used to show actual construction applications.

President Harold P. King made his annual re-

port of Association activities during the past year and reported the Board of Directors had endorsed action of the California Council of Professional Engineers relating to amending the Civil and Professional Engineers Registration Act contingent upon further study of the matter; approved strengthening the Riley Act to increase the seismic percentage to three percent in lieu of two percent, and action which would require the governing body of any municipality or county to see that plans and specifications for building construction bear the signature of a certified architect, civil engineer, or structural engineer, and bear his certification that they comply with provisions of the Act.

NEW MEMBERS: Reuben Ralph Alvy and Bernhard Cardan, Members. Edgardo Contini, Richard W. Dennis, and Paul A. Hansen, Associates.

AMERICAN SOCIETY OF CIVIL ENGINEERS SAN FRANCISCO SECTION

The December meeting held in the Engineers Club of San Francisco on the 16th, was devoted to a program of the "Presidential Election—Campaign in Reverse", and featured Ralph G. Wadsworth, B. A. Etchevery, James I. Ballard, Robert Lipman, and Walter L. Huber as participants.

H. W. Haberkorn and H. B. Corlett have been named to represent the Society on the San Francisco Engineering Council in its program of student counseling.

Plans are being made for the ASCE Convention which is scheduled for San Francisco, March 3-6. In addition to technical sessions it is planned to take delegates on personal tours of outstanding engineering projects in the Bay Area.

at the San Francisco Rowing Club on December 11th.

The event served as a means of raising funds for the "Femineers" Engineering Scholarship which the organization expects to present in January.

Mrs. John Feis and Mrs. Jason Bloom, served as co-chairmen of the event.

**STRUCTURAL ENGINEERS ASSOCIATION
OF NORTHERN CALIFORNIA**

Committee reports, election results and a review of Association activities highlighted the regular December meeting, held in the Engineers' Club in San Francisco.

Showing of the Southern Pacific Company's motion picture of the recent Tehachapi Earthquakes, emphasized the effect of earthquakes on construction in areas affected and the need for continuing study of design and use of materials in construction.

**ELECTED PRESIDENT AMERICAN
SOCIETY MECHANICAL ENGINEERS**

Frederick S. Blackall, Jr., president and treasurer of the Taft-Pierce Manufacturing Company, Woonsocket, R. I., was elected president of The American Society of Mechanical Engineers for 1953 at the Society's 73rd annual meeting held recently in New York City.

Election of four regional vice-presidents included: Henry R. Kessler, manager Republic Flow Meters Co., New York; Paul R. Yopp, district sales manager The Babcock & Wilcox Co., Atlanta, Ga.; Ben George Elliott, professor of mechanical engineering, University of Wisconsin, Madison, Wis.; and Harry R. Pearson, personnel director Dallas Power & Light Co., Dallas, Texas.

**AMERICAN SOCIETY FOR METALS
PUGET SOUND CHAPTER**

(Reported by H. T. Southworth, Boeing Airplane Company)
Albert G. Zima, head of the West Coast Techni-

cal Section, International Nickel Company in Los Angeles, discussed the subject of "Modern Cast Irons" before the November meeting.

Zima pointed out the impressive development made in cast irons over the past 30 years. This period has seen the evolution of a large family of cast irons from the relatively weak material of 30 years ago which could only be specified as coarse or fine grained cast iron and was often employed only as a "space filler." In this time the strength of unalloyed cast iron has been doubled and many special purpose irons have been developed with exceptional properties for applications such as heat or corrosion resistance. Zima's definition of cast

Season's Greetings

As members of the Producers' Council, we are engaged in the sale of quality building products and equipment.

To provide this quality in our products, we must as a matter of necessity obtain a price that often times requires us to obtain a preference over our competitors.

This, of course, is nothing new, and has been the general scheme of things since the stone axe was the accepted instrument of persuasion. Fortunately for the salesman, there are factors other than price surrounding a sale.

As evidence of this, we offer the following bit of logic that was composed in the middle of the last century and with which we think you will agree.

"It's unwise to pay too much, but it is worse to pay too little.
When you pay too much, you lose a little money.
When you pay too little, you sometimes lose everything, because the thing you bought was incapable of doing the thing it was bought to do. The common law of business balance prohibits paying a little and getting a lot—it can't be done. If you deal with the lowest bidder, it is well to add something for the risk you run. And if you do that you will have enough to pay for something better."

—John Ruskin

iron "steel" in which graphite is dispersed throughout its mass," gives a hint as to the vast number of alloys that may be considered under the classification of cast iron.

Zima discussed at length the role of graphite as effecting the characteristics of cast iron and how the properties may be influenced by control of the form and distribution of the graphite. Such control may be obtained by various inoculants introduced into the superheated melt, control of cooling rates, and by use of alloying elements.

Zima pointed out the many advantages of cast iron and illustrated these by calling attention to several applications, such as engine blocks, where it has been uniquely successful for many years. The qualities and uses of the malleable and pearlitic cast irons were also included.

Considerable attention was then devoted to the spheroidal or ductile irons. These most recently developed irons have brought a 100% increase in strength over gray iron. Zima emphasized that the ductile irons will not replace other irons or steels but will find many applications on their own merits as they present a new set of very desirable properties.

NATIONAL CONVENTION AMERICAN SOCIETY CIVIL ENGINEERS

The national convention of the American Society of Civil Engineers will be held in San Francisco on March 3-6, with a technical program of 20 half-day sessions to be presented, one of the largest programs ever scheduled.

Field trips will include Moffet Field, P. G. & E. plants at Pittsburg and Antioch and other outstanding engineering projects in this area.

SOCIETY OF AMERICAN MILITARY ENGINEERS—SAN FRANCISCO POST

Brig. Gen. Robert H. Wylie spoke on the subject "Master Planning for the Port of San Francisco," at the regular December meeting, which was held in the Presidio Officers Club of San Francisco.

watercolors that are large, free, and luminous, and watercolors that contain a basic lyrical realism.

This year's group of 125 paintings were selected by a Jury composed of Jules Engel, Richard Haines, Clarence Hinkel, Joan Irving, and Douglas Parr-shall.

EXHIBIT OF PAINTINGS BY GRANDMA MOSES

The M. H. deYoung Memorial Museum in Golden Gate Park, San Francisco, is showing a special exhibition of twenty-five paintings by Grandma Moses during December.

Although virtually unknown twelve years ago, Grandma Moses has become at the age of 93, a figure of international prominence. Her work has been exhibited in Europe and America, and her paintings are included in numerous collections throughout the world. Her paintings reflect her love of children, animals, color, and nature in general.

A.I.A. ACTIVITIES

(From Page 25)

Recent new members include George H. Anderson, Barrie D. Branch, and Arnold W. Eckheff, Corporate Members. John C. O'Brien, Associate Member.

Mrs. Waldo B. Christenson has been named president of a group of architect's wives who have formed an organization to assist in arrangements for the AIA national convention in 1953.

PORTLAND ARCHITECTURAL FIRM EXPANDS PROFESSIONAL SERVICE

Donald W. Edmundson and Neil R. Kochendoerfer, architects of Portland, have announced that R. Evan Kennedy, Professional Engineer, has joined their staff as Chief Engineer in charge of structural and civil engineering design.

Kennedy is well known in construction and engineering fields, and is currently director of the Professional Engineers of Oregon and the Oregon Building Congress. He is a past president of the Structural Engineers Association of Oregon; an associate member of the ASCE, and member of the Colorado Society of Engineers.

MARBLE—HOLY LAND

(From Page 18)

green valley, sterile and lonely. Within a few months after the discovery of the ancient quarry, however, Gilboa was no longer lonely nor—from the viewpoint of social usefulness—sterile. The mountain rang with the hammers of laborers who began their operations with the cutting of a fifteen hundred foot block of the cream-and-grey stone.

GOOD LIGHTING ... as important as your most important tool!

CHECK YOUR OFFICE LIGHTING

Take a good look at your General Office. Here are workers trained at great expense to use precision "tools"—typewriter, calculator, business machines of many types.

Their ability to get the most from these "tools"—to make full use of the training and experience—is dependent upon good illumination.

Smooth-Holman efficient lighting helps eliminate costly mistakes, lost time and eye fatigue.

There is a Smooth-Holman fixture to meet every need and there is no finer lighting equipment made in the West. For the solution to your lighting problem, see your Smooth-Holman Lighting Engineer!

Shown at work on the Master Floodlight is this huge 45-ton hydraulic drawing press. A mighty important "tool" for us. It helps bring you a precision lighting product at lower cost.

Samples were sent to the United States where tests conducted in New York University laboratories showed that Gilboa, the barren, yields marble stronger than that required by American building codes.

The first shipment of Israeli marble marked not only the end of Gilboa's sterility, but also the beginning of a new economic security for the aged stronger than that required by American building city of Nazareth. For the marble quarries of Nazareth are now supporting hundreds of local Christians.

TEHACHAPI EARTHQUAKES

(From Page 23)

lateral forces came through with no structural damage but some minor interior partition cracks occurred. Similarly, the Prudential Building, the General Petroleum Building, and the Tishman Building, all designed for lateral forces, came through with only minor plaster cracks or broken light fixtures.

I believe there are several lessons to be learned:

(1) Supervision and inspection of construction during construction operations are essential. Some failures in the Bakersfield area may be attributed directly to plans not being followed.

(2) Structural separation of buildings is impor-

tant. The effect of one building pounding against an adjacent structure was plainly evident in Bakersfield.

(3) Damage in some (hollow) concrete block construction indicates that horizontal reinforcing steel should not all be concentrated at top and bottom as permitted by some Codes.

(4) There is a need for studying the possibility of isolating non-bearing plastered partitions. Partitions not directly enclosed by the structural frame showed less plaster damage.

KARL V. STEINBRUGGE

Digest of a talk by Karl V. Steinbrugge, Structural Engineer, Earthquake Section, the Pacific Fire Rating Bureau, San Francisco offices.

The "Tehachapi" earthquake was widely heralded in the newspapers as a shock to be ranked with the greatest. From the Structural Engineer's viewpoint this was not so. While the shock was felt over a wide area (in San Francisco at least ten pressure tanks on tall buildings sent in alarms), in the Bakersfield, Arvin, Tehachapi area it was not notable from the standpoint of intensity or duration. According to numerous Structural Engineers who had viewed damage from other shocks, the observed damage in this shock was not at all excessive.

Well designed and well constructed buildings came through in excellent manner. This, of course, was a clear indication that generally speaking the present methods of seismic design are well founded.

Numerous details, however, must bear more study. Rod bracing systems must be tight at all times—thus at the time of design the engineer should weigh the possibility of gradual slacking of rods due to movements in the wood roof etc. The details of rod (or angle) bracing are important—failures were noted at their connections in many instances. Attention to details on the part of the Engineer would have eliminated all of this type of failure.

Roof and floor diaphragm of steel, wood or concrete generally performed well. One steel diaphragm failed along a wall due to the lack of adequate ties. The performance of wood diaphragms was excellent, although there was evidence of some diaphragms in the epicentral region going through large lateral deflections.

Several instances were noted where the design on the drawings was excellent but the actual field construction bore little resemblance to the drawings. In these cases the building usually showed signs of distress. The need of competent supervision by the Engineer, Architect and Building Department cannot be overemphasized.

Concrete block performed from very good to very bad—again workmanship generally was the

deciding factor in the observed damage. The use of reinforced concrete bond beams notably held weakened structures together.

Perhaps the most outstanding indication of the value of good design and construction was the public schools. Unit masonry building constructed prior to the Field Bill generally suffered heavily, while those built since the Field Bill suffered negligible or no damage.

Strong evidence exists that vertical earthquake components acted on structures and this should be further investigated. Also the observed damage to well built structures on firm ground as compared with those on poor ground again raises the question if our present codes are correct—for damage to well designed structures on poor ground was generally greater than to similar structures on good ground.

PORTLAND CEMENT ASSOCIATION OPENS NEW MONTANA OFFICES

The Portland Cement Association has announced opening of new district offices in Helena,

Montana, with Jack Y. Barnes as district engineer in charge.

JACK Y. BARNES
Engineer

The new office is located in the Gold Block and will carry on the Associations educational work, technical services and local promotion activities throughout the state of Montana.

This is the twenty-seventh district to be established by the Association in principal cities throughout the United States and Canada. It will provide Montana cement users, large and small, with service and information not previously available to them, including the Associations storehouse of educational literature and technical information, covering every field of cement use and made possible by the voluntary financial support of member companies.

Barnes, joined the Association in 1937 as office engineer with the Des Moines, Iowa, office and in 1940 was appointed field engineer for northwest Iowa with headquarters in Mason City.

SOUTHWEST RESEARCH INSTITUTE

Groundbreaking ceremonies took place on December 12th, for construction of the New Physics Building for the Southwest Research Institute, San Antonio, Texas. Site of the new building is on the Essar Ranch.

BOOK REVIEWS PAMPHLETS AND CATALOGUES

WINDOWLESS STRUCTURES—A Study in Blast-Resistant Design. Prepared by Federal Civil Defense Adm., Washington 25, D. C. Price \$1.00.

A 164 page manual issued by FCDA, representing a collaboration of outstanding engineers and architects and demonstrates the first detailed methods whereby the dynamic forces of an atomic blast can be applied in designing a building.

It is a study in blast-resistance design and dynamics of structures. The behavior of windowless structure of reinforced concrete is analyzed mathematically. The purpose of the authors is to establish design procedures which can be used in the average design office.

The study as a whole has the cooperation of the American Society of Civil Engineers and The American Institute of Architects, together with representatives of the National Society of Professional Engineers, and of government authorities concerned with atomic effects.

LEGAL GUIDE—For Contractors, Architects and Engineers. By I. Vernon Werbin. Publisher McGraw-Hill Book Co., Inc. 330 W. 42nd St., New York 36. Price \$4.75.

Another handy guide to legal problems that contractors, architects, and engineers often face by Mr. Werbin who is a member of the New York Bar and a licensed Professional Engineer.

The book describes 83 situations of the sort that frequently lead to litigation, and tells how the courts viewed each case. It is written to be easily understood and one which every contractor, architect, and engineer should have.

NEW BRICK HOMES PLANS. Publisher. Structural Clay Products Institute, Washington 6, D. C. Price \$5.50.

A new booklet containing complete plans and specifications for all homes shown; illustrates modern and traditional fire places; describes how to build an outdoor barbecue grill; and shows details for modern insulated walls.

Contains a large number of illustrations, plans and designs, as well as complete material on 45-home designs.

BUSINESS ACTION FOR BETTER CITIES. Chamber of Commerce of the United States, Washington 6, D. C. Price \$1.00.

It is the record of a two-day national Businessmen's Conference on Urban Problems held in Portland, Oregon, recently; contains four panel discussions and two major addresses; and shows how business and civic leaders throughout the nation are attacking community problems arising from rapid growth, traffic congestion, inadequate parking facilities, and urban blight.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the ARCHITECT & ENGINEER. Merely mark the items you want and clip or paste the coupon to your letterhead.

430. ARMORPLY BUILDING PANELS. A new booklet describing "Armorply Building Panels" for curtain wall construction has just been published by United States Plywood Corporation. The new booklet, published specially for architects, contains suggested design details and specifications for the unusual building panels, which were developed under the sponsorship of certain government agencies during the years following World War II. Because of Armorply building panel's unusual properties of maintenance-free interiors and exteriors, quick erection and lowered costs for foundations and framework, nationwide attention was recently focused on their use in the construction to the Detroit Technical Center of a leading automobile manufacturer. A.I.A. 17-A, 12 pages illus., 6/52.

431. NEW PERLITE FIREPROOFING DATA AVAILABLE. "Fireproofing with Perlite," an illustrated pamphlet summarizing basic details of 32 approved fire retardant constructions using lightweight plaster or concrete made with perlite aggregate is now available without cost from any of the 47 member companies of the Perlite Institute. The new two-color pamphlet gives construction details for thin, lightweight, easily-applied fire protection for columns, floors, ceilings and partitions. Diagrams show the required thickness of perlite plaster or concrete, fur-

ring details and other basic elements to obtain the listed fire rating. Technical data is compactly arranged for quick reference by architects, contractors, engineers, building officials and others interested in fireproofing methods that reduce dead load, occupy minimum floor space and speed up construction. 8 pages illus., 12/5/52.

432. BRIGGS BEAUTYWARE LINE. A new specially designed Briggs Beautyware condensed catalog will be distributed by Briggs Manufacturing Company, Plumbing Ware Division. The catalog contains details, specifications and illustrations of the entire Briggs Beautyware line, including porcelain enameled steel bathtubs, lavatories and sinks, vitreous china lavatories, closet combinations, urinals and bidets, as well as brass fittings. Included in the catalog is a special two-page insert containing exact color matched enamel deposits of the famous four Briggs Beautyware decorator pastel colors of plumbing fixtures, Sky Blue, Sea Green, Sandstone and Ivory, along with a color harmony chart scientifically prepared to enable anyone to easily achieve color harmony in bathroom decoration. 28 pages illus., 12/52.

433. VINYL-CORK TILE. A completely revised catalog on Dodge Vinyl-Cork Floor Tile has been published by Dodge Cork Company, Inc. The revised catalog describes in detail the features of the tile and shows in a color chart the 16 patterns in which the tile is made. In addition, a comparison table gives the results of numerous tests made by an independent testing laboratory on Dodge Vinyl-Cork Tile and other hard surface floor coverings. Design data, installation specifications and directions for the care and maintenance of Dodge Tile complete the information available in this catalog. Cat. #53, 8 pages illus., 12/52.

434. CORRUGATED ASBESTOS-CEMENT ROOFING AND SIDING. The Philip Carey Mfg. Company has just completed a Manual giving complete data and specifications for Careystone Corrugated Asbestos-Cement roofing and siding. Included in this Manual are numerous drawings and photographs showing exact method of application and erection. Application recommendations, shipping and crating information, suggested specifications and suggestions to users as well as information for estimating quantities are incorporated. 82 pages, illus., 10/52.

435. VITRIFIED CLAY WALL COPINGS. The Stillwater Clay Products Company has available specification catalog sheets for wall coping, including Stillwater's patented Inter-Lok wall coping; chimney tops and pots, standard and modular flue linings and fittings, and for Vitrified Clay Pipe, both standard and extra-strength. These descriptive sheets, complete with illustrations are available without charge. 12/52.

436. GLASS FIBER ACOUSTICAL INSULATIONS. A new folder titled, "A Complete Line of Glass Fiber Acoustical Insulations" and including all relevant details on Ultralite, Ultratone and Ultracoustic, has just been issued by the Gusto-Bacon Mfg. Co. of Kansas City, Mo., manufacturers of the three products. The folder describes the physical properties of each of the three products, sound absorption, thermal conductivity, etc., then points out the qualities the three have in common, including their principal uses, their ease of application, and the choice of facings available with each. Sizes and dimensions for each are given on the concluding page. 4 pages illus., 10/52.

437. BASEBOARD RADIANT AND CONVECTED HEAT DISTRIBUTION. Two types of National Art Baseboard, which is both a replacement for customary wooden baseboard and an efficient residential heating medium, are described and illustrated in the catalog that is now available from The National Radiator Co. Type EF is shown as the most conventional type for installation against plaster after a house has been built. It extends 2 1/4 in. into the room from the plaster wall. Type ER is for semi-recessed installation. It is generally installed during building construction. Having approved I.B.R. ratings, 8 in. lengths of National Art Baseboard are said to be generally installed in forced hot water heating systems, but minimum lengths can be used with steam. The catalog gives roughing-in dimensions, pictures of baseboard installations, illustrations of trim items such as splicer plates and inside and outside corners, plus complete rating data. A.I.A. 30-34, illus., 11/52.

MARBLE INDUSTRY

(From Page 19)

Warren and Wetmore, the architects who completed the Terminal, to specify marble for the building, is applauded.

"Perhaps you may not know," writes Mr. Ponce, "that this Terminal which was opened to traffic on February 2, 1913, gives service to approximately 220,000,000 people every year. The degree of wear and tear on the building and the difficulty of maintaining neatness and cleanliness, day after day, can easily be imagined. Few buildings in the world support such unremitting traffic, and I think we can say that few buildings are maintained to higher standards. Marble is largely the answer.

"This impression is not mine alone. Each of us here interested in the job of maintaining the Terminal is thankful for every square foot of marble in it. Because it is today still beautiful and fresh, clean, and good to look at. And I don't doubt it will remain so for many years to come."

Pierre Bullinck, general manager of the St. Regis Hotel in New York writes, "Marble is heralded by the maintenance staff as a true Godsend . . . the beautiful marble walls from floor to ceiling on all typical floors in the original portion of the building, built in 1903, still present an air of dignity and refinement that is appreciated by everyone.

"In the new portion of the hotel, built in 1927, the wall surface in the corridors is of plaster and painted, above a six inch marble base. In addition to the constant attention that these plaster surfaces require, they have to be painted on an average of once every year. It is reasonable to assume that, over this period of years, the extra cost of marble has paid for itself in maintenance economies alone."

Many other instances and histories of the use of marble in commercial buildings were cited and it was also pointed out that in addition to showing building profits through maintenance economies, the use of marble wainscoting in a building adds an air of prestige which attracts better tenants, a hidden profit which is almost self evident.

NATIONAL ASSOCIATION OF HOME BUILDERS CHICAGO

A dramatic demonstration of housing progress at work is in store for the nation's home builders when they convene in annual Convention in Chicago on January 18-22.

With emphasis on the latest technical developments in home building, a corps of business, industrial and housing research experts will cover in detail virtually every subject of current interest to builders. Concurrently, leading manufacturers will treat the industry-wide gathering to the largest

(See Page 41)

ESTIMATOR'S GUIDE

BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight cartage, at least, must be added in figuring country work.

BONDS—Performance or Performance plus Labor and Material Bond(s), \$10 per \$1000 on contract price. Labor & Material Bond(s) only, \$5.00 per \$1000 on contract price.

BRICKWORK—MASONRY—

Common Brick—Per 1 M. laid—\$150.00 up (according to class of work).
Face Brick—Per 1 M. laid—\$200.00 and up (according to class of work).
Brick Steps—\$3.00 and up.
Common Brick Veneer on Frame Bldgs.—Approx. \$1.20 and up (according to class of work).
Face Brick Veneer on Frame Bldgs.—Approx. \$2.00 and up (according to class of work).
Common Brick—\$36.00 per M.—truckload lots, delivered.
Face Brick—\$81.00 to \$106.00 per M., truckload lots, delivered.

Glazed Structural Units—Walls Erected—

Clear Glazed—
2 x 6 x 12 Furring \$2.00 per sq. ft.
4 x 6 x 12 Partition 2.25 per sq. ft.
4 x 6 x 12 Double Faced Partition 3.00 per sq. ft.
For colored glaze add .30 per sq. ft.
Marble Brick \$150.00 per M.—F.O.B. Pittsburgh.

Fire Brick—Per M.—\$111.00 to \$147.00.
Cartage—Approx. \$10.00 per M.
Paving—\$75.00.

Building Tile—
65/92 12-inches, per M. \$139.50
65/92 12-inches, per M. 105.00
44/5 12-inches, per M. 84.00
Hollow Tile—
12x12x12-inches, per M. \$146.75
12x12x12-inches, per M. 158.85
12x12x12-inches, per M. 177.10
12x12x12-inches, per M. 235.30
F.O.B. Plant

BUILDING PAPER & FELTS

1 ply per 1000 ft. roll. \$5.30
2 ply per 1000 ft. roll. 7.80
3 ply per 1000 ft. roll. 9.70
Brownin, Standard 500 ft. roll. 9.70
Sixkraft, reinforced, 500 ft. roll. 8.50

Sheathing Papers—
Asphalt sheathing, 15-lb. roll. \$2.70
30-lb. roll. 3.70
Dampcourse, 216-ft. roll. 2.95
Blue Plasterboard, 60-lb. roll. 5.10

Felt Papers—
Deadening felt, 3/4-lb., 50-ft. roll. \$4.30
Deadening felt, 1-lb., 50-ft. roll. 5.05
Asphalt roofing, 15-lbs. 2.70
Asphalt roofing, 30-lbs. 3.70

Roofing Papers—
Standard Grade, 108-ft. roll, Light \$2.50
Smooth Surface, Medium 2.90
Heavy 3.40
M. S. Extra Heavy 3.95

BUILDING HARDWARE—

Sash cord com. No. 7 \$2.65 per 100 ft.
Sash cord com. No. 8 3.80 per 100 ft.
Sash cord spool No. 7 3.65 per 100 ft.
Sash cord spool No. 8 3.35 per 100 ft.
Sash weights, cast iron \$100.00 ton
1-Ton lots, per 100 lbs. \$3.75
Less than 1-ton lots, per 100 lbs. \$4.75
Nails, per keg, base \$12.55
8-in. spikes 12.45
Rin Knob lock sets 1.80
Butts, dull brass plated on steel, 3/8x3/2 1.76

CONCRETE AGGREGATES—

The following prices are net to Contractors unless otherwise shown. Carload lots only.

	Bunker per ton	Del'd per ton
Gravel, all sizes	\$2.44	\$2.90
Top Sand	2.38	3.13
Concrete Mix	2.38	3.08
Crushed Rock, 1/4" to 3/4"	2.38	2.90
Crushed Rock, 3/4" to 1 1/2"	2.38	2.90
Roofing Gravel	2.81	2.90
River Sand	2.50	3.00
Sand—		
Lapis (Nos. 2 & 4)	3.56	3.94
Olympia (Nos. 1 & 2)	3.56	3.88

Cement—

Common (all brands, paper sacks), Per Sack, small quantity (paper) \$1.05
Carload lots, in bulk per bbl. 3.55
Cash discount on carload lots, 10c a bbl., 10th Prox., less than carload lots \$4.00 per bbl. f.o.b. warehouse or delivered.
Cash discount 2% on L.C.L.

Trinity White { 1 to 100 sacks, \$3.50 sack
warehouse or del.; \$3.56
Medusa White { bbl. carload lots.

CONCRETE READY-MIX—

Delivered in 4-yd. loads:
Per cubic yard, 1-8 M. \$ 9.80
1-7 M. 10.15
1-6 M. 10.70
1-5 M. 11.40

Curing Compound, clear, drums, per gal. 1.03

CONCRETE BLOCKS—

	Hay-dite	Basalt
4x8x16-inches, each	\$.19	\$.19
8x8x16-inches, each	23	27
8x8x16-inches, each	27	27
12x8x16-inches, each	38	40
12x8x16-inches, each		60

Haydite Aggregates—
3/4-inch to 3/8-inch, per cu. yd. \$7.75
3/8-inch to 1/2-inch, per cu. yd. 7.75
1/2-inch to 3/4-inch, per cu. yd. 7.75

DAMP-PROOFING and Waterproofing—

Two-coat work, \$9.00 per square.
Membrane waterproofing—4 layers of set ureth foalt, \$10.00 per square.

Hot coating work, \$5.00 per square.

Medusa Waterproofing, \$3.50 per lb. San Francisco Warehouse.

Tricoat concrete waterproofing, 60c a cubic yd. and up.

ELECTRIC WIRING—\$15 to \$20 per outlet for conduit work (including switches).

Knob and tube average \$6.00 per outlet

ELEVATORS—

Prices vary according to capacity, speed and type. Consult elevator companies. Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about \$9,500.00.

EXCAVATION—

Sand, \$1.00; clay or shale, \$1.50 per yard. Trucks, \$30 to \$45 per day.

Above figures are an average without water. Steam shovel work in large quantities, less; hard material, such as rock will run considerably more.

FIRE ESCAPES—

Ten-foot galvanized iron balcony, with stairs, \$250 installed on new buildings; \$300 on old buildings.

FLOORS—

Asphalt Tile, 1/8 in. gage 18c to 35c per sq. ft.
Composition Floors, such as Magnesite 40c-\$1.25 per sq. ft.
Linoleum, standard gage, sq. yd. \$2.75
Masticpave—\$1.50 per sq. yd.
Battiship Linoleum—1/8"—\$3.00 sq. yd.
Terrazzo Floors—\$2.00 per sq. ft.
Terrazzo Steps—\$2.50 per lin. ft.
Mastic Wear Coat—according to type—20c to 35c.

Hardwood Flooring—

Oak Floor—g-T & G—Unfin.—
Clear Old, White \$425 \$405 \$ \$
Clear Old, Red 405 380 \$ \$
Select Old, Red or White 355 340 \$ \$
Clear Pin, Red or White 355 340 335 31 1/2

Forced Air Furnace, 75,000 BTU	198.00
Water Heaters—5 year guarantee	213.50
With Thermostat Control	
20 gal. capacity	87.50
30 gal. capacity	103.75
40 gal. capacity	120.00

INSULATION AND WALLBOARD—

Rockwool Insulation—	
(2") Less than 1,000 sq. ft.	\$64.00
(2") Over 1,000 sq. ft.	\$9.00
Cotton Insulation—Full thickness	
(13 1/4")	\$95.50 per M sq. ft.
Sisalation Aluminum Insulation—Aluminum coated on both sides	\$23.50 per M sq. ft.
Tileboard—4" panel	\$7.00 per panel
Wallboard—1/2" thickness	\$5.00 per M sq. ft.
Finished Plank	\$69.00 per M sq. ft.
Ceiling Tileboard	\$69.00 per M sq. ft.

IRON—Cost of ornamental iron, cast iron, etc., depends on designs.

LUMBER—

S4S No. 2 and better common	
O.P. or D.F., per M. f.b.m.	\$100.00
Rough, No. 2 common O.P. or	
D.F., per M. f.b.m.	95.00

Flooring—

Per M. Deliv.	
V.G.-D.F. & Btr. 1 x 4 T & G Flooring	\$225.00
"C" and better—all	225.00
"D" and better—all	225.00
Rwd. Rustic—"A" grade, medium dry	185.00
8 to 24 ft.	

Plywood, per M sq. ft.	
1/4-inch, 4,080 S15	\$135.00
1/2-inch, 4,080 S15	219.00
3/4-inch, per M sq. ft.	292.00
Plywood	11 1/2¢ per ft.
Platym	25¢ per ft.

Shingles (Rwd. not available)—	
Red Cedar No. 1—\$9.50 per square; No. 2, \$7.00;	
No. 3, \$5.00.	
Average cost to lay shingles, \$6.00 per square.	
Cedar Shakes—1/4" to 3/4" x 24/26 in. hand split	
thepared or split resawn, per square—	\$15.25
3/4" to 1 1/4" x 24/26 in. split resawn,	
per square	17.00
Average cost to lay shakes, 8.00 per square	
Pressure Treated Lumber—	
Woinized—Add \$3.00 per M to above	
Crossed,	
8 lb. treatment—Add \$45 per M to above	

MARBLE—(See Dealers)

METAL LATH EXPANDED—

Standard Diamond, 3/40, Copper	
Bearing, LCL, per 100 sq. yds.	\$43.50
Standard Ribbed, ditto	\$47.50

MILLWORK—Standard.

D. F. \$150 per 1000. R. W. Rustic	\$175
per 1000 (delivered).	
Double hung box window frames, average	
with trim, \$12.50 and up, each.	
Complete door unit, \$15 to \$25.	
Screen doors, \$8.00 to \$12.00 each.	
Patent screen windows, \$1.25 a sq. ft.	
Cases for kitchen pantries seven ft. high,	
per lineal ft., upper \$9.00 to \$11.00;	
lower \$12.00 to \$13.00.	
Dining room cases, \$20.00 per lineal foot.	
Rough and finish about \$1.00 per sq. ft.	
Labor—Rough carpentry, warehouse heavy	
framing (average), \$75.00 per M.	
For smaller work average, \$85.00 to \$100.	
per 1000.	

PAINTING—

Two-coat work	per yard 85c
Three-coat work	per yard \$1.10
Cold water painting	per yard 25c
Whitewashing	per yard 15c
Unseal Oil, Strictly Pure	Wholesale
(Best 7 1/2 lbs. per gal.)	Ret. Bottled
Light iron drums	per gal. \$2.28
5-gallon cans	per gal. 2.40
1-gallon cans	each 2.52
Quart cans	each .71
Pint cans	each .38

NATIONAL HOME BUILDERS

(From Page 36)

display of building materials and home equipment ever presented.

Highlighting the technical program will be a presentation on residential air conditioning staged by the Air Conditioning and Refrigerating Machinery Association. A series of "how to do it" presentations will feature NAHB's famed Operation Trade Secret Program; efficient use of gas and electricity in today's homes; panel discussions by builders, government leaders and economic authorities; and "shop-talks" will complete a diversified program.

Frank W. Cortright, NAHB's executive vice president, has announced that among the featured Convention speakers will be Nathaniel Owings of Skidmore, Owings and Merrill; Joseph Keenan of the American Federation of Labor; Dr. Alan Stockdale of the National Association of Manufacturers; Brown Whitley, president of the Mortgage Bankers Association; and Clarence Manion, dean emeritus of the School of Law of the University of Notre Dame.

HEATING AND VENTILATING CHICAGO EXPOSITION

The 11th International Heating and Ventilating Exposition has been scheduled in the International Amphitheatre, Chicago, Ill., from January 26 to 30. The event being held during the 59th annual meeting of the American Society of Heating and Ventilating Engineers.

S. T. JOHNSON COMPANY BUYS BOILER FIRM

Purchase of Mears-Kane-Ofeldt, Inc., of Bridgeport, Pa., has been announced by the S. T. Johnson Co., pioneer builders of oil burners of Oakland and Philadelphia.

The Bridgeport firm has specialized in the manufacture of gas and oil fired high pressure steam boilers for over fifty years and their famous M-K-O boilers will continue to be available under the new ownership as a division of S. T. Johnson Co.

Your clients will like the "extra" finish of built-in telephone facilities

You can make planned telephone facilities a part of your building plans so easily. And the popularity of conduit for concealed telephone wiring and conveniently located telephone outlets shows that clients like the extra finish they give to a new home. Appealing, too, is the fact that planned facilities allow them to change the position of their telephone, or add a new instrument later without marring the beauty of their home with exposed wiring.

Just call Pacific Telephone's free Architects and Builders service. They'll be glad to help you plan for better living tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone

IN THE NEWS

ARCHITECT SELECTED

Architects Will G. Corlett and A. W. Anderson of Oakland have been commissioned by the Board of Supervisors of Alameda County to design a new Health Center Building to be erected on the Fairmount Hospital grounds.

NEW BANK ON GUAM

The Bank of America will soon extend its services into the far Pacific and plans on constructing a Bank of America building on the Island of Guam.

ARCHITECT SELECTED

Architect Harry J. Devine, of Sacramento, has been chosen by the Salano County Board of Supervisors, to draw plans and specifications for the construction of various additions to the Salano County Fairgrounds buildings at Vallejo.

Construction will include enlargement of parimutual facilities, roofing of the grandstand, sheep barns, cafeteria, and a horse show barn.

COURT HOUSE ADDITION

Architect Robert Keeney of Medford, Oregon, has been commissioned by the Siskiyou County Board of Supervisors to draft plans for the construction of a 2-story, and basement, addition to the County Court House in Yreka.

Construction will be of reinforced concrete.

HOSPITAL SITE PURCHASED

The Permanente Hospital Foundation, with headquarters in Oakland, has purchased a site in Santa Clara County, near the city of Santa Clara, for the purpose of constructing a new Permanente Hospital. The site is on the Santa Clara-Los Gatos highway.

EXHIBITION BUILDING

Architect C. I. Ryland of Monterey is currently engaged in designing a new Exhibition Building to be erected at the Santa Clara County Fair Grounds in San Jose.

The building, which has been authorized by the board of supervisors and will cost approximately \$520,000, will be of concrete with laminated wood arched roof.

ARCHITECT SELECTED

The architectural firm of Schmidts & Hardman of Berkeley, has been chosen by the San Leandro Unified School District board to draft plans and specifications for the construction of a new Junior High School and a new Elementary School in San Leandro.

Cost of the projected schools is approximately \$2,000,000.

OIL REFINERY FOR PINOLE

A certificate of necessity has been issued by the Public Utilities Commission, Oakland, for the construction of a new Oil Refinery near Pinole, Contra Costa County.

The project will cost about \$25,500,000.

and according to officials of Southwestern Engineers of Los Angeles, work will commence at once.

PALO ALTO TO SHOPPING CENTER

Plans are under way for the construction of a new shopping center in Palo Alto at Alma Street and Diss Road.

Comprising a department store, supermarket and a group of stores the project will be called the "Mid Peninsula World" and will represent an investment of more than \$1,500,000.

Morgan Stedman, Palo Alto, is the architect.

SCHOOL BONDS APPROVED

A special School Bond election to provide \$1,300,000 for construction of a new school building and to make additions to existing schools was recently approved by voters of the San Lorenzo Elementary School District of Alameda County.

The architectural firm of Schmidts & Hardman of Berkeley has been commissioned by the School Board to draw plans for the project.

SCHOOL BONDS DEFEATED

Voters of the Porterville Union High School District, Porterville, recently rejected a proposed \$664,000 school bond issue at a special election.

Funds were proposed for the construction of a main classroom and shop building.

NEW CHURCH AND PARISH HALL

The Roman Catholic Archbishop of San Francisco recently announced construction would soon start on a new Church and Parish Hall to be built in Cupertino, Santa Clara County.

Cost of the proposed frame and stucco buildings is \$148,997. Architect Vincent G. Raney of San Francisco, is the architect.

ARCHITECT SELECTED

Architect Wm. G. Merchant of San Francisco, has been chosen by the San Francisco Medical Society to draw plans and specifications for the construction of administration offices for the Irwin Memorial Blood Bank.

The new building will be of 3-story design, containing 34,000 sq. ft. and will include an auditorium to seat 1,000 persons; blood bank facilities, and general offices.

BONDS FOR HOSPITAL

Voters of the Washington Township Hospital District, Niles, approved a bond issue of \$1,250,000 at a special election. Funds are to be used for the construction of a new 50-bed Washington Township Hospital near Niles.

Sorensen & Ellsworth of Niles are the architects.

OHIO PASSES LAW ON HOUSE TRAILER

The State of Ohio is the first in the Union to enact legislation providing for adequate water and sanitary facilities for house trailer parks.

The House Trailer Park Sanitation Law insists that all house trailer park operators be licensed by local and district Boards of Health wherever trailer parks are located. Prior to licensing, an operator must

submit and receive approval on all plans and specifications for proposed water supply, sewage and sewage disposal, plumbing, drainage and sanitary equipment.

The new law makes it mandatory for the house trailer park operator to provide a complete sanitary sewage system, and each trailer must be properly connected to such system.

AUTOMOBILE SALES AND SERVICE

Architect Leonard H. Ford of Walnut Creek, is working on a new 1-story automobile sales and service building to be built in San Rafael.

The building will contain 12,000 sq. ft. of floor space; will have wood roof trusses, and will be of concrete.

Estimated cost is \$70,000.

IMPROVEMENT BOND ELECTION FAILS

A proposal to issue \$5,000,000 in bonds for the purpose of financing the construction of an addition to the Marin County Court House, and the development of a new County Civic Center in San Rafael, was recently rejected by voters of the county.

The plan submitted to voters called for \$1,500,000 for court house improvements, and \$3,500,000 for the civic center.

NEW LOUVRE DIFFUSER EFFICIENT LIGHTING

An advanced concept of architectural beauty and lighting efficiency is revealed in a new louvre diffuser created by the Edwin F. Guth Co., of St. Louis, called the GRATULITE.

It is an integral plastic louvre for fluorescent which allows as much light to pass through as the best diffusing glassware. Diffusion results from 3/4" cubical facets which give 45° x 45° lengthwise and crosswise lamp shielding; makes a permanent installation easy to maintain; furnished in sizes up to 4' long.

ARCHITECTURAL FIRM EXPANDS

The architectural firm of Paul A. Ryan and John Michael Less recently announced the appointment of Hans G. Glass, Architect, as a partner in the firm of Ryan and Lee, Architects.

Main offices of the firm are in San Francisco.

SCHOOL BONDS APPROVED

Voters of the Healdsburg Union High School District, Sonoma County, recently approved \$775,000 at a special election to be used in constructing a new High School building in the City of Healdsburg.

NEW VALLEY BREWERY

San Fernando Valley will soon have a new brewery building according to an an-

nouncement by Anheuser-Busch, Inc., of St. Louis.

Presently announced plans call for the construction of a \$15,000,000 structure on Roscoe Blvd.

Holmes & Norver, Inc., of Los Angeles are the Engineers, and Meyer & Evans of San Francisco are Consulting Architects.

PLYWOOD FACTORY ADDITION

A 1-story addition containing 37,000 sq. ft. is being added to the Shasta Plywood, Inc. plant at Anderson, Calif.

Cost of the improvements will exceed \$100,000 according to Lockwood Greene Engineers, Inc. of New York City, engineers for the project.

SCHOOL BONDS DEFEATED

Voters of the Nevada County Union High School District recently rejected a proposal to issue \$1,000,000 in bonds for the construction of a new High School building in Grass Valley, California.

The plan was submitted at a special election.

HOME BUILDERS INSTITUTE OF LOS ANGELES

Mark A. Thoreson, president of the Home Builders Institute of Los Angeles has announced the appointment of J. W. (Bill) O'Sullivan as secretary of the Home Builders Institute. He will assist Ray V. Carey, executive vice-president.

O'Sullivan leaves the position of sales manager at Westwood Building Materials of Los Angeles.

HOSPITAL BONDS ARE APPROVED

Voters of the Eden Township Hospital District, San Lorenzo, approved a plan to issue \$975,000 in bonds to build a 2-story addition to the District hospital in Castro Valley, which is now under construction.

Architects D. D. Stone & Lou Mulloy of San Francisco are architects on the work.

ARCHITECT FOR CHURCH

Architect Donald G. French of San Bruno has been chosen by the St. Andrews Episcopal Church of Lomita Park, to draft plans and specifications for the construction of a new Church building in the City of San Bruno.

HUNTINGTON BEACH SCHOOL ADDITION

The architectural firm of Allison & Rible of Los Angeles, has been commissioned by the Huntington Beach High School Board to draft plans for the construction of a \$562,458 addition to the Huntington Beach High School.

The work will comprise three new buildings, two of them will be of reinforced concrete to harmonize with the present school plant, and the third will be of wood and steel framing.

MUNICIPAL IMPROVEMENT BOND ELECTION FAILS

A plan, submitted by the Board of Supervisors of San Joaquin County to the voters, proposing the issuance of \$6,500,000 in bonds to finance the cost of constructing a new San Joaquin County Court House, and \$500,000 for a new jail, both buildings to be built in Stockton, was rejected by the voters at a recent special election.
